*Astrophysical Observatory (Saanich Mountain).*—Repairs were made to the director's and engineer's residences. The exterior and dome were painted and general repairs executed.

*Generally.*—General repairs and improvements were made to the Meteorological observatory and public building.

## GENERALLY

Improvements and repairs were made or painting done to the public buildings at Bamfield, Chilliwack, Comox, Cumberland, Duncan, Nelson, and William Head (quarantine station).

## MILITARY BUILDINGS

## MONTREAL, P.Q.

*Drill Hall, Craig Street.*—A rock asphalt mastic floor was laid in the drill hall under contract awarded in January, 1930. Alterations and repairs were made to the heating apparatus and plumbing work. The pipe trench, which extends the whole width of the drill hall, was drained.

*Old Wesley United Church (First Canadian Motor Machine Gun Brigade).*—Alterations were made and painting, glazing, plumbing, heating and electrical work done.

*Headquarters, M.D. No. 4.*—Part of the hall on the third floor in front of the elevator was partitioned off. Floors were repaired and finished, five offices redecorated, and a permanent cupboard built in the office of the district military engineer.

## WESTMOUNT, P.Q.

*Grant Garage.*—A small addition to the Westmount R.C.O.C. store building was constructed. An 8-inch brick wall was built replacing the metal siding of the small building. The roof drain was connected up to the sewer.

## GANANOQUE, ONT.

*Armoury.*—A new asphalt mastic floor was laid in the armoury.

## HAILEYBURY, ONT.

*Armoury.*—A contract was awarded in October, 1929, for an addition to the existing building, 37 feet by 66 feet 7 inches, two stories and basement in

height. It has brick and terra-cotta walls with stone trimmings, the foundations being of concrete. A steel frame supports the wooden floors and plastered partitions. The work was not completed at the end of the year.

## NAPANEE, ONT.

*Armoury.*—An asphalt mastic floor was laid in the armoury.

## PEMBROKE, ONT.

*Armoury.*—A new roof was laid over the armoury.

## WINNIPEG, MAN.

*Fort Osborne Barracks.*—The alterations to the central heating plant commenced last year were completed.

## REGINA, SASK.

*Armoury.*—Interior fittings were supplied and installed in the armoury.

## ESQUIMALT, B.C.

*R.C.N. Barracks.*—General repairs were made to the buildings and interior and exterior painting done. Alterations, additions and repairs were made to the senior naval officer's residence. The squash court building was erected and completed.

*H.M.C. Dockyard.*—The renewals and repairs of roads, paths, etc., and tennis court were completed. A heating plant for the clothing store was installed, general repairs were made to the buildings, and exterior and interior painting done.

## GENERALLY

General repairs were made to the military buildings at Sherbrooke, P.Q., Thetford Mines, P.Q., and Portage la Prairie, Man.

## MILITARY HOSPITALS

## HALIFAX, N.S.

*Camp Hill Hospital.*—A new greenhouse was constructed and repairs were made to the roof of the main building.

## WEST ST. JOHN, N.B.

*Lancaster Hospital (D.S.C.R.).*—A terrazzo and marble floor was laid in the sterilizing room, and new concrete floors on the main floor and in the carpenter shop in the basement. A partition was erected and a radiator installed in the special ward. A standpipe from the basement to the second floor was put in. A 16-point annunciator and push buttons were installed in the nurses' station, and the lights in several rooms changed.

## STE. ANNE DE BELLEVUE, P.Q.

*Hospital.*—A cure verandah, with ultra violet transmission glass, was built under contract. The superstructure for a greenhouse was erected. The boilers were removed and a new one installed. Eight prison type closets, with floor flushometers were also installed, replacing the old toilets which were removed. The basement drains were replaced with cast iron pipe, and new cold

water pipes with valves put in. The present hot-water tank in the boiler room was removed, and a new 1,200-gallon tank with all connections installed and covered with asbestos. Seventy-seven wire painted guards were erected.

LONDON, ONT.

*Westminster Hospital.*—The work consisted in repairing the roofs, building a fire wall in the boiler room, etc., and laying new floors in the T.B. pavilion. The new entrance road from Wellington road was graded.

TORONTO, ONT.

*Christie Street Hospital.*—A one-story vault was erected for the storage of X-ray films. Considerable repairs were made to the boiler. A concrete roadway and curb were constructed. Repairs were made to the steel sash and the exterior of the stores building was painted.

WINNIPEG, MAN.

*Deer Lodge Hospital.*—A contract was made in July, 1929, for the erection of an addition to the new Deer Lodge Hospital. It is irregular in shape and about 6,350 square feet in area. The building is of fireproof construction, the walls being of brick, partitions of terra-cotta, and floors of reinforced concrete supported on structural steel, with concrete foundations. The kitchens, stores, bakery and refrigerators have tile floors and dado. All other parts have cement floors with plaster finish on ceilings and walls. An electric push button control passenger elevator, and an electric push button control dumb-waiter were supplied and installed.

VANCOUVER, B.C.

*Shaughnessy Hospital.*—An ash hoist from the boiler room was installed.

# HARBOUR WORKS

By K. M. Cameron, Chief Engineer

---

## NOVA SCOTIA

### ARGYLE SOUTH

A block and span wharf, 88 feet long, 20 feet wide, and  $14\frac{1}{2}$  feet high at the outer end, was constructed with a stone approach, 18 feet long and 20 feet wide.

### BAILEY'S BROOK

An extension was built on the inner end of the eastern channel pier. It is of continuous cribwork, 250 feet long, 10 feet wide, and averaging 8 feet high. In addition to this, a portion of the old work connecting the outer pier with the new work was reconstructed. This work is 67 feet long, 8 feet wide, and 8 to 9 feet high. Miscellaneous repairs were made to the outer portion of the old work, consisting of renewals to ballast floor, ballast and covering.

### BARRINGTON PASSAGE

*Ice Piers.*—The construction of ice pier No. 5, between Barrington passage and Cape Sable island, was commenced. During the year a creosoted cribwork block, 8 feet high, was built on the shore, and the foundation completed by laying 68 cubic yards of bag concrete foundation. A contract was let for the erection of ice pier No. 4. No construction work was done, but the creosoted timber was delivered before the end of the year.

*Wharf.*—The covering and part of the stringers on the shoreward end of the wharf, 250 feet in length, and 20 feet in width, were renewed.

### BLUE ROCKS

The outer 150 feet of the breakwater was rebuilt for a height of 3 feet. Minor repairs were also made to the plank, stringers, sheathing and fenders on the inner portion of the work.

### BRIDGEWATER

The contract for the reconstruction of the railway wharf, referred to in last year's report, was completed.

### CANNING

The upstream 70-foot length of the wharf, 40 feet wide, was removed for a height of from 12 to 15 feet, and rebuilt of cribwork and pile trestle bent construction. The cribwork was constructed on the channel face for a width of 20 feet, with the pile trestle construction on the inside. The top was covered with 3-inch plank.

### CAPE ST. MARY

A groyne was constructed on the shore, north of the breakwater, to prevent the drifting of sand and gravel westerly along the shore, and filling up the harbour alongside the breakwater. The groyne is 100 feet long, 12 feet high, and 10 feet wide on top, with batters of 1 in 12 and 1 in 4. The work was not entirely completed at the end of the year.

## CHAPEL COVE

A cribwork protection wall, 250 feet long by 8 feet wide, and 5 feet high, was built at high water mark along the shore on the west side, to prevent the seas from breaking through the narrow beach and washing the gravel into the cove.

## CHEGOGGIN POINT

A cribwork extension, 150 feet in length, 20 to 30 feet in width, and from 19 to 24 feet in height, was built to the breakwater by contract. A shore protection, 200 feet long, 8 feet wide, and 8 feet high, was constructed.

## CLARKE'S HARBOUR

The construction of the native timber pile trestle wharf commenced last year was completed. It is 682 feet long, 25 feet wide, with an "L," 50 by 40 feet, on the east side of the outer end. There is a stone approach with gravel top for the first 40 feet, followed by ballasted post bents for a distance of 280 feet, with driven pile bents for the remainder of the work. The work was done by contract.

## DIGBY

A temporary shed, 270 feet long, and from 14 to 28 feet wide, was erected on the spur pier of the wharf for the accommodation of passengers and freight, while the main pier is being widened and a new freight shed built. The stringers, covering, and part of the caps on the high level platform were renewed for a length of 120 feet and a width of 14 feet. The first 80 feet of the incline slip was re-covered with 6-inch plank, and upon the lower 30 feet the stringers, guard, and covering were renewed. The whole incline, for a distance of 250 feet, was covered with 2-inch plank, laid lengthwise for the convenience of the lorries handling freight. A new foundation for the hoisting engine and an engine shed were built. Two extra 12- by 12-inch stringers were laid under the railway track for a distance of 360 feet, with new 6-inch covering, 15 feet wide. The 2-inch covering was extended as a driveway on the main pier, and on an area of 35 by 60 feet of the spur pier. Under the railway track eighteen posts were placed on mud sills, and repairs made to the bracing, etc.

## DILIGENT RIVER

*Beach Protection.*—Last year a cribwork beach protection, 260 feet long, 6 feet wide, and 4 feet high, was constructed on the gravel bar opposite the public wharf to prevent the sea washing through the beach. This year the work done consisted in extending the cribwork wall on top of the beach for a distance of 57 feet to the westward, and 250 feet to the eastward, by driving fifty-one piles 9 feet into the gravel, and sheathing the outer side with 4-inch sawn spruce for a height of from 4 to 4½ feet.

*Wharf.*—The stringers, covering, guard and bracing of the wharf were renewed and twelve new bearing piles driven.

## DRUMHEAD

The outer portion of the wharf, which was badly sunken owing to the ravages of the teredo near low water, was raised from 1 to 3 feet for a distance of 85 feet, by renewing crib timbers, stringers, guard, covering and ballast. To protect this portion of the work and to hold it firmly in place, seventy-seven creosoted piles were driven along the outer face and sides of the "L."

## DUBLIN SHORE

An extension, 50 feet long, 20 feet wide, and 19 feet high, was built to the "L" of the breakwater. Repairs were made to plank, stringers, crib logs, fenders and guard timber. The landing steps were also repaired.

## EAST COMEAU'S HILL

A landing wharf, 110 feet long, 15 feet wide, and 11 feet high at the outer end, was built, and includes a stonework approach, 90 feet in length, with a block and span at the outer end.

## FINLAY POINT

A dam, 50 feet long, was built to control the water of the stream, which runs into the sea at the western side of the wharf. Two short protection walls of pilework were constructed near the outer end of the work. Behind the old groyne, forty loads of stone and thirty loads of brush were placed, and 2,000 cubic yards of sand excavated from the boat berth at the western side of the wharf.

## FOURCHU

*Beach Protection.*—The work done during the year involved the construction of 130 feet of cribwork, connecting the work done last year with the mainland.

*Wharf.*—The pile portion of the wharf was reconstructed, and the outer 70 feet of the cribwork pier rebuilt with pilework. Repairs to the inner 95 feet of the block and span portion were commenced but not completed.

## FOX ISLAND

*Breakwater-wharf.*—The work done consisted in replacing 7,000 feet b.m. of 5-inch sheathing on the outer side and end of the breakwater-wharf, repairing a break at the outer end between the main work and the "L," and placing 200 cubic yards of ballast and twenty-four fenders. Repairs were also made to the covering, stringers and guard.

*Shore Protection Work.*—A portion of the shore protection work leading to the breakwater was reconstructed. The rebuilt portion, which is near the centre of the work, is 100 feet long, 11 feet wide, with an average height of 10 feet, and sheathed with 3-inch plank. The inner end of the work, for a length of 50 feet, was also rebuilt to an average height of 3 feet.

## GRAFF BEACH

The cribwork on the inner end of the breakwater was repaired for a distance of 166 feet, and new ballast put in with a gravel top, 12 inches thick. The entire covering and stringers on the next 141 feet of the work were renewed, and ballast, twenty-one bolsters, twenty-three fenders, and one mooring post placed in position.

## GRAND ETANG

The eastern pierhead was rebuilt from low water to the top of the work, and seventy sheathing piles were driven along the exposed faces. Minor repairs were made to the face piling on the channel side of the western pier.

## GRASS COVE

The contract for the construction of the breakwater-wharf, referred to in last year's report, was completed.

## HALIFAX

*H.M.C. Dockyard Wharf No. 5.*—The contract for the reconstruction of this wharf, referred to in last year's report, was completed.

*H.M.C. Dockyard Parade Grounds.*—The work on the contract awarded last year was completed. Extra work was also done during the year, consisting in covering the crushed stone top of the parade, removing old sods on the east side, raising the stone wall on the south side, rebuilding the roadway on the north side and constructing new curb, gutters, drains, etc.

*H.M.C. Dockyard Camber No. 3.*—The old sheathing and the portion of the cribwork above half tide, on all sides, were removed and the work continued on the harbour frontage to the north, a further distance of 110 feet, or as far as the stone wall adjacent to No. 2 boat slip, making a total length of 566 feet. The work was rebuilt with stone and earth-filled native timber cribwork, and the entire seaward face sheathed with 6- by 8-inch sheathing. On the southern side the sheathing has an average penetration of 4 feet, and on the four remaining sides and continuing northerly on the harbour frontage, an average penetration of 2 feet.

## HANTSPORT

The top of the old wharf and approach was removed and rebuilt with new crib logs, stringers, face timbers, guard timbers and plank. Repairs and renewals were made to fenders, guard, plank and stringers on the main wharf. About 1,500 tons of ballast was placed in the cribwork.

## HARBOUR AU BOUCHE

The wharf was renewed for a length of 90 feet by placing new bearing piles, caps, stringers, covering, and guard. Temporary repairs were made to the crib portion in order to make it safe until the renewal of the remainder of the wharf is completed.

## INVERNESS

Along the channel face of the west pier 230 face piles were driven, 1,560 lineal feet of brush fence was built on the beach, and 3,000 sand grass plants planted. In the piers 387 cubic yards of ballast was placed, and 60 yards of ballast and brush put in behind the narrow west pier to keep the sand from flowing into the channel. Minor repairs were made to the planking of both piers.

## JEDDORE (OYSTER PONDS)

An extension, 32 feet long and 22 feet wide, was built to the wharf. It consists of a span, 12 feet long and 22 feet wide, and a cribwork block, 20 feet long by 22 feet wide. Repairs were also made to the approach.

## KETCH HARBOUR

A wharf was constructed having a stone and gravel approach, 85 feet long, 20 feet wide, and averaging 5 feet high, and four cribwork blocks with three spans, 111 feet long, and 20 feet wide. The inner block is 12 feet long, and the others each 20 feet long, while the spans are each 13 feet long. The total length of the wharf, including the approach, is 196 feet, and the height at the outer end 20 feet.

## LAWLOR'S ISLAND

*East Wharf.*—A wharf was constructed under contract on the east side of the island. The stone and gravel approach is 80 feet long, 15 feet wide, and

averaging 3 feet high. The solid stone-filled native timber cribwork is 30 feet long, 15 feet wide, with an average height of 6 feet, and the pilework, 33 feet long, 15 to 35 feet wide, with a height of  $20\frac{1}{2}$  feet at the outer end.

*West Wharf.*—The repairs made to the wharf during the year comprised the placing of thirty-nine new bearing piles, nine fender piles, 100 lineal feet of 12- by 12-inch guard, 30 lineal feet of 12- by 12-inch cap, 200 lineal feet of 6- by 8-inch braces, and 12,000 feet b.m. of 4-inch covering.

#### LITTLE BRAS D'OR

A wharf was constructed on the western side of Little Bras d'Or channel. It is a solid native timber structure, 78 feet long and 24 feet wide, having a depth of water alongside the wharf of 10 feet at L.W.O.S.T.

#### LITTLE JUDIQUE PONDS

A contract was entered into for the construction of an extension to the breakwater, 100 feet long by 18 feet wide, and an "L," 50 feet long by 18 feet wide, at the outer end of the extension. The work is of native timber cribwork, fully ballasted, with sheathing placed on the seaward side, and outer and eastern ends of the "L."

#### LITTLE RIVER HARBOUR

A cribwork block was built in a depression of a reef to the south of the wharf, to protect boats and small craft lying in the harbour. It is 100 feet long, 10 feet wide on top, and from 6 to 11 feet high, with a batter of 4 in 12 on each side.

#### LOWER EEL BROOK

A landing wharf, 125 feet long, 17 feet wide, and 10 feet high at the outer end, was constructed and has dry masonry walls, stone-filled centre, gravel top, and wooden guard and fenders.

#### MAIN-À-DIEU

A small breakwater was constructed at Lahey's Point, situated about  $1\frac{1}{2}$  miles south of the public wharf. The work is of solid native timber cribwork, 101 feet long and 11 feet wide.

#### MARGAREE HARBOUR

A section near the outer end of the pier, 14 feet long by 10 feet wide by 10 feet high, was rebuilt with native timber cribwork, and the face sheathed with 8-inch spruce logs. A cribwork section near the inner end of the western pier, 100 feet long by 12 feet high by 10 feet wide, and the upper 4 feet of the eastern cribwork pierhead, 30 by 30 by 4 feet, was also reconstructed. A 100-foot cribwork extension, 10 feet wide by 4 feet high, was built to the shore protection work on the east side of the harbour, and a cribwork sand groyne, 50 feet long by 4 feet high by 6 feet wide, constructed at right angles to the outer end of the shore protection.

#### MARGAREE ISLAND

An extension, 50 feet long by 21 feet wide by 19 feet high, was built to the public wharf. It was sheathed with 5-inch hardwood on the seaward side to the top of the work, and on the outer end and lee side to half-tide. The work was covered with 3-inch plank.

## MCNUTT'S ISLAND

A section of the cribwork beach protection, 150 feet long, 8 feet wide, and from 6 to 8 feet high, was rebuilt, and the upper 3 feet, for a length of 195 feet, renewed.

## METEGHAN

*Breakwater.*—A cribwork extension was built by contract to the "L" of the breakwater. It is 60 feet long, 20 feet wide on top, and 31 feet high at the outer end, with batters of 1 in 12 and 3 in 12.

*Wharf.*—A section of the wharf, 40 feet long, 10 feet wide, and 10 feet high, which had been burned, was rebuilt, and ten new fenders and three mooring posts placed.

## MORDEN

The work done during the year consisted in making repairs and renewals to plank, stringers, guard, subguard, and close piling on the outer end and seaward side of the breakwater.

## MURPHY'S POND

A pile wall, 500 feet long, was built around the basin, completely inclosing it, to arrest the flow of sand into the basin from the pond. From the basin and entrance 3,000 cubic yards of sand were removed by drag line excavator.

## NEW HARBOUR

A pier was built inside the breakwater to accommodate boats engaged in the fresh fish collecting service on the coast. The work is 30 by 40 feet on top, consisting of two piers, each 30 by 10 feet on top, battered on both sides, with a span of 20 feet between, and connected by a timber truss carrying the floor of the wharf across the span. The piers are constructed of native timber cribwork sheathed to half-tide with 4-inch creosoted sheathing. A shed, 20 by 25 feet, was also constructed. Along the side of the pier and next to the breakwater, a platform, 7½ feet wide, was built and supported by braces to give additional floor area. A plank walk, from 4 to 7 feet wide, was constructed, joining the pier with the crib portion of the breakwater. A derrick and six ladders were placed on the new pier. Repairs were made to the damaged sections of the concrete portion of the breakwater.

## NEWPORT LANDING

Repairs and renewals were made to plank, stringers, top crib logs, guard timber, and fenders on the old portion of the wharf.

## NYANZA

All the native timber bracing, pile caps, stringers, covering, guard, etc., of the pile trestle portion of the wharf were renewed for a length of 50 feet.

## OSBORNE

The old pile wharf, 201 feet in length, which was destroyed by limnoria, was taken down and replaced by a block and span structure, 110 feet long, 15 feet wide, and 15 feet high at the outer end.

## OWL'S HEAD

The outer 66 feet of the wharf and all of the "L" was rebuilt from high water. New covering was placed on the remaining portion of the work. The shed was repaired and painted, and repairs were made to the approach.

## PARRSBORO

*Beach Protection.*—A portion of the protection work, 166 feet long, extending easterly from the angle of the work, was torn down and rebuilt of sheathed cribwork. The work is  $8\frac{1}{2}$  feet wide on top, and 12 feet high.

*Wharf.*—The old freight shed was removed from the outer end of the old wharf, and one pile bent taken from the old pier. A combined shed, office, and waiting-room, 24 by  $22\frac{1}{2}$  feet, was constructed on the outer portion of the new wharf.

## PEAS BROOK

The contract awarded last year for the construction of a breakwater-wharf was completed. It is a solid ballast-filled, native cribwork structure, 322 feet long, 20 to 22 feet wide, with an "L" at the outer end, 30 by 30 feet, giving a face length of 52 feet. There is a batter of 1 in 4 on the seaward side and 1 in 8 on the harbour side. The structure is sheathed with hardwood sheathing on the seaward side and outer face of the "L." The work has a height of 25 feet at its outer end.

## PICTOU

*East Wharf.*—The general repairs to the east wharf, which were commenced last year, were continued and completed. The work done consisted in driving twenty-five creosoted piles across the outer end face, securing damaged piles in position, sheathing the outer end with 5-inch hardwood, and placing 5-inch hardwood sheathing on a 250-foot length on the west side of the wharf. Sundry repairs and renewals were made to the sheathing, stringers, pile caps, and guard timber.

*Shed Wharf.*—The 5-inch hardwood sheathing on a 118-foot length of the east side of the wharf was renewed, some 28,000 feet b.m. of 4-inch decking was laid, and general repairs and renewals were made to stringers, piling and guard timber. Miscellaneous repairs were also made to the freight shed walls, flooring, windows, etc.

## PLEASANT HARBOUR

The upper 5 feet of the wharf, including three cribwork blocks and two spans, were rebuilt. A new covering, fenders, landing posts, and two mooring posts were placed.

## PORT GREVILLE

A breach in the protection work was closed by rebuilding a portion, 500 feet long. This comprised driving piles in the beach 5 feet apart and sheathing them with 4-inch material.

## PORT MAITLAND

The contract for the construction of an extension to the breakwater, commenced last year, was completed. It is a native timber creosoted sheathed cribwork structure, 583 feet long. The first 521 feet is 20 feet wide, and the outer 62 feet, 25 feet wide and 34 feet high, the last 20 feet being stepped down to 4 feet above L.W.O.S.T. On the inner or harbour side at the outer end there is a creosoted pilework extension, 46 feet long and 10 feet wide, giving a total top width of 35 feet for this section. A timber wave-break, 348 feet long and 10 inches wide, was also constructed with bolsters, braces, and fenders.

## PYE'S HEAD

A wharf was constructed and has a cribwork approach, 63 feet long, and 20 feet wide, and pile trestle work, 125 feet long, and 20 feet wide, with an "L" 50 by 25 feet, giving a face length of 70 feet. There is a freight shed, 24 by 13 feet, situated on the outer portion of the "L." The wharf is approximately 25 feet high along the outer face.

## ROCHDALE

A small breakwater, 60 feet long by 10 feet wide by 8 feet high, was built of native timber cribwork, fully ballasted, fendered and planked.

## ST. FRANCIS HARBOUR

*Breakwater-wharf.*—The contract awarded last year for the construction of an extension to the breakwater-wharf was completed. It has a total length of 374 feet on the seaward side, a width of 16 feet on top, and a height of 24½ feet at the outer end, and is of continuous cribwork sheathed on the seaward side and end with 4-inch hardwood sheathing. The seaward and harbour sides are battered 1 in 4 and 1 in 8, respectively.

*Groyne.*—A cribwork groyne was constructed some 300 feet to the eastward of the breakwater-wharf. It is of cribwork, 100 feet long, 7½ feet wide, and 7½ feet high, filled with ballast, single-fendered at each cross log and sheathed at the outer end. At the shoreward end there is a length of 20 feet of stone and brush-work.

*Old Breakwater.*—Minor repairs were made to face logs, sheathing and ballast on the outer end of the old breakwater.

## SANFORD

*Breakwater.*—The sheathing on the seaward side of the breakwater was repaired and part of the stringers and some covering renewed.

*Shore Protection.*—The work done consisted in building a native timber stone-filled cribwork shore protection, 100 feet long, 10 feet wide, and 10 feet high.

## SEAL ISLAND

A boat slip was built on the east side of the island opposite the breakwater, to provide landing facilities. The slip is 100 feet long, and 20 feet wide, built with the slope of the beach on mud sills, on which stringers were placed and covered with 3-inch plank and 4- by 6-inch guard.

## SHAD BAY

A shed, 14 by 16 feet, was built and is supported by a cribwork block, 16 by 18 by 12 feet.

## SHAG HARBOUR

The contract awarded last year for the construction of a breakwater was completed. It is a native timber stone-filled cribwork structure, 213 feet long, 20 feet wide, and 23 feet high at the outer end, and has a rock bank approach, 53 feet long by 20 feet wide.

## SHEET HARBOUR WEST

The cribwork portion of the wharf comprising the outer 40 feet in length by 25 feet in width, and the "L," 20 by 63 feet, was rebuilt up from high water. The pilework section, 141 feet long and 25 feet wide, was redecked and repairs were made to the fenders. The shed was painted and the roof shingled.

## SHELBURNE

The upper 3 feet of the cribwork blocks, the caps, stringers, and covering over the crib, span and trestle bent portion of the wharf, except under the freight shed, were renewed. Under the track on the west side of the wharf, two sets of built-up 8- by 16-inch stringers were placed.

## SHIP HARBOUR EAST

The wharf was rebuilt up from high water mark, and five new mooring posts were placed in position. The shed was painted and shingled.

## SHORT BEACH

A cribwork extension was built by contract to the breakwater. It is 100 feet long, 15 feet wide on top, and 23 feet high at the outer end, with batters of 1 in 12 and 3 in 12. The outer 86 feet of the existing breakwater, 30 feet in width, was raised for a height of 4 feet.

## SOBER ISLAND

The entire covering and stringers of the wharf were renewed. The top of the cribwork was repaired, and sixty-five new fenders were placed in position. New sills, a door and a window were put in the shed.

## SOUTH INGONISH

*Beach Wharf.*—Owing to the road leading to the wharf being continually damaged by stormy seas washing over it and depositing thereon beach stones and gravel, a new wharf was built on a site formerly occupied by H. C. Corson's wharf. The new wharf is of native timber structure, and is 97 feet long by 25 feet wide. A good road was constructed to connect the new wharf with the public highway.

*Ferry Wharf.*—The covering, fenders and sheathing were renewed.

## SYDNEY

A warehouse was constructed by contract on the terminal pier. It is a single-story wooden frame building, 150 feet long and 40 feet wide. The floor, for 50 feet of the southern portion of the shed, is at wharf level, and the remaining portion at railway car level, these floors being connected by a ramp. The outer walls are sheathed with drop siding and the roof is supported by centre posts. Sliding doors extend along the western side of the building for a distance of 72 feet, and four single sliding doors are placed on the eastern side. A small office is located in the southwestern corner of the building. The work done by day labour included the partial filling of the pond at the rear of the new wharf and warehouse.

## UPPER PORT LATOUR

The top of the outer 218 feet of the wharf was rebuilt and widened for 8 feet on the harbour side, and pile trestle work and close pile sheathing placed for 33 feet across the outer face. A seawall, 196 feet long, 1 foot wide on top, 4 feet wide on the bottom, and 12 feet high, was constructed on the east or seaward side. The work was done by contract.

## VOGLER'S COVE

An extension, 20 feet long, 15 feet wide, and averaging 16 feet high, was built to the wharf. The total length of the wharf is now 137 feet.

## WALLACE

A portion of the crib blocks above high water, and the spans over the shoreward 167 feet of the work, were renewed, and repairs and renewals made to the filling and stonework in the approach.

## WEDGEPORT

A new top, including covering, stringers and guard, was built to the wharf for a distance of 425 feet, and sixty bearing and fender piles were renewed.

## WEST ADVOCATE

A contract was awarded for the construction of an extension to the breakwater-wharf. The extension, 200 feet long, 20 feet wide on top, and 43 feet high at the outer end, was commenced, and the major portion of the work completed. The work has a batter of 1 in 4 on the seaward side. The fenders, sheathing and covering have not been placed, and a portion at the outer end, 70 feet long and 12 feet deep, has yet to be constructed.

## WESTPORT

The work done consisted in renewing thirty-six creosoted bearing and brace piles, 38 to 42 feet long, and the bracing on the outer part of the wharf. Minor repairs were made to the covering.

## WINDSOR

A portion of the old Goudge wharf, 15 feet wide, 70 feet long and 10 to 20 feet deep, was torn down and rebuilt with timber cribwork. Close piling was also placed on the outer face of the new work.

## YARMOUTH BAR

A 100-foot length of the breakwater on the western end, 10 feet high and 15 feet wide, was taken down and rebuilt. The covering was repaired and a shore protection block, 90 feet long, 10 feet wide and 6 feet high, built at the eastern end.

## GENERALLY

Repairs were made to the following works:—

Abbott's Harbour, breakwater; Advocate, wharf; Anderson's Cove, breakwater; Annapolis Royal, wharf; Arichat, groyne; Auld's Cove, wharf; Avonport, wharf; Baddeck, wharf; Ballantyne's Cove, breakwater; Bay St. Lawrence, pier; Big Pond, wharf; Boulardarie Centre, wharf; Breen's Pond, breakwater; Canada Creek, wharf; Canso, wharf; Cape Auget, breakwater; Cap Rouge, breakwater; Castle Bay, roadway; Chebogue Harbour, breakwater; Cow Bay (Port Morien), breakwater; Culloden, breakwater; D'Escousse, wharf; French River, wharf; Friar's Head, breakwater; Gabarus, protection wall, Grand Desert, breakwater; Grand Mira, wharf; Grand Narrows, wharf; Hall's Harbour, wharf; Harbourville, wharf; Iona, wharf; Irish Cove, wharf; Joggins, wharf; Johnston's Harbour, wharf; Kelly's Cove, wharf; Kingsport, wharf; Larry's River, breakwater; Litchfield, breakwater; Little Narrows (South), wharf; Lockeport, wharf; Long Point, roadway; Lower Plymouth, wharf; Lower Selmah, wharf; Lower West Pubnico, wharf; McKay's Point (Judique), breakwater; Mabou Harbour (West), channel wall; Marble Mountain, wharf; Margaretville, breakwater; Middle Country Harbour, wharf; Middle East Pubnico, wharf; Mill Cove, breakwater; New Campbellton, wharf; New Haven, pier; North Sydney, breakwater; Ogilvies, wharf; Parker's Cove, breakwater; Peggy's Cove, breakwater; Petit de Grat, pier; Petite Rivière, breakwater; Picketts Pier, wharf; Pleasant Bay, wharf; Point Edward, wharf; Port Beckerton, wharf; Port Dufferin East, wharf; Port Felix, wharf; Port George, breakwater; Port Latour, breakwater; Port Medway, wharf; Port Wade, wharf; Port Williams, wharf; Pugwash, wharf; Rays Creek, wharf; River Bourgeois, wharf; Ross Ferry, wharf; St. Joseph du Moine, pier; Sandy Cove, breakwater; Seaside, wharf; Sheet Harbour Passage, wharf;

Skinner's Cove, piers; The Wharves, breakwater; Toney River, west pier; Trenton, wharf; Trout Cove, breakwater-wharves; Washabuck Centre, wharf; West Arichat, wharf; West Berlin, shore protection; White Point, wharf.

The following works were commenced, but were unfinished at the end of the fiscal year:—

Brooklyn, breakwater extension; Charlos Cove, breakwater extension; Glace Bay, reconstruction of quay wall.

## PRINCE EDWARD ISLAND

### ALBERTON

The top portion of the wharf approach was repaired. The decayed 12- by 12-inch face timbers in both walls were renewed for an average height of 5 feet, new cross-ties put in where required, and a new 8- by 8-inch guard was placed. The whole approach was then fender-piled at 10-foot centres and graded with gravel. Minor repairs were made to the 3-inch covering on various portions of the pierhead.

### CHARLOTTETOWN

The contract for the extension of the eastern side of the railway wharf, and the construction of a ferry shed thereon, which was described in last year's report, was completed. The work done by day labour consisted in screening the windows in the new shed, putting in ten ventilators, building transfer platforms, grading the west side of the wharf, and installing a new electric service line, in conduit, to connect both sheds with the local electric light system. A small toilet building was constructed on the inner end of the new extension, and a chemical fire extinguisher of 40-gallons capacity placed in the western shed.

### GEORGETOWN

*Queen's Wharf.*—The pierhead of Queen's wharf was strengthened by driving creosoted piles at 5-foot centres on both sides of the four blocks, as well as across the channel face of the outer block. The top face timbers of all the blocks were renewed for an average height of 2 feet, and the roadway thereon was graded with gravel. Portions of the 8- by 8-inch guard timber were also renewed.

*Railway Wharf.*—The doors of the frostproof potato shed, which are of the refrigerator type, were adjusted and repacked with canvas, and 4- by 5-inch gutters placed over the twenty door openings in the shed. In addition to this, two expansion joints were put in the steam pipe line, which is carried in a trench just below the floor level on all sides of the building. In order to eliminate the use of flat cars when loading steamers alongside the wharf, four loading platforms were supplied. These platforms, which are 15 feet long by 10 feet wide, are constructed of 3-inch plank, in two sections, and carried on two trestles, 12 feet long by 4½ feet high, iron strapping being placed on the sill of each door to carry their inner end.

### HAGGERTIES

The channel face of the pierhead of the wharf, 52 feet long, was reconstructed. Along the face of the old outer block ten creosoted piles were driven, to which three 12- by 12-inch creosoted walings were secured. The face and sides of the new work were strengthened with twenty-five piles driven at about 7-foot centres. The decayed or broken floor stringers were renewed in the pierhead, and the whole top covered with new 3-inch hemlock plank. Part of the

8- by 8-inch guard timber on the pierhead and approach was replaced, and the approach roadway, which is 412 feet long by 22 feet wide, graded with clay and gravel.

#### HAYDEN

The wharf was rebuilt and is now 196 feet long, including the pierhead, 30 by  $31\frac{1}{4}$  feet, carried on piles creosoted up to half-tide mark. The superstructure is of 12- by 12-inch native timber, fully ballasted, with top floor-stringered and planked over. The portion immediately inward of the pierhead is  $38\frac{3}{4}$  feet long by 27 feet wide, built of 12- by 12-inch timber and filled with broken stone, and the approach shoreward, 21 feet wide, is of similar construction. The whole work is finished with an 8- by 8-inch guard timber, and fender-piled at about 5-foot centres.

#### HURD'S POINT

Under contract an extension was made to the western end of the pierhead, for a width of 50 feet and a length of  $54\frac{1}{2}$  feet, and a small freight shed was constructed thereon. The extension has a solid pole foundation for an average height of 9 feet with a square timber superstructure, 6 feet high, fully ballasted, floor-stringered and covered with 3-inch plank. The sides and ends are double fender-piled at 10-foot centres. The freight shed is 26 by 48 feet, with a 10-foot 3-inch post. The exterior walls and trim were given two coats of paint.

#### NEWPORT

The eastern side of the pierhead of the wharf, immediately inward of the outer span, for a length of 200 feet and an average height of 15 feet, was rebuilt with 12- by 12-inch timber. General repairs were made to the top timber of the approach for a length of 236 feet. The new work was fender-piled at 10-foot centres, and the roadway graded with gravel.

The guide pier on the western side of the wharf not being long enough to protect the new ferry boat from ice, the provincial Government extended it, and under agreement one-half of the cost of the work was paid for by this department, as the extension also provided the further berthing accommodation urgently required at this place. The extension consists of a 30- by 34-foot block, having a pole foundation and a 12- by 12-inch timber superstructure, 6 feet high, filled with ballast. The top was gravelled over, and the sides were fendered with native and creosoted piling.

#### POWNAI BAY

The outer block of the wharf pierhead, 35 by 40 feet, having become a complete wreck due to the ravages of the teredo, and not being required for the present amount of traffic, was removed. A new block, 15 by 40 feet, was built in the space occupied by the span, which connected the old outer block and the pierhead. It has a pole foundation with a 12- by 12-inch timber superstructure filled with ballast, floor-stringered and planked over, the sides and outer ends being fender-piled at 10-foot centres. In addition to this work, the whole western side of the pierhead, 40 feet in length, was reconstructed with poles and timber, for a width of 20 feet, and the floor stringers and 3-inch covering were renewed.

#### SOURIS

The contract to repair the breakwater, which was commenced last year, was completed. The work consisted in making up the settlement which had taken place in various portions of the stone slope. Along the seaward side of the middle section, for a length of 460 feet, 224.26 cubic yards of rough stone,

measuring not less than 1 cubic yard, was placed, and across the southern face and part of the western face of the outer block 1,723·74 cubic yards of rough stone, measuring not less than 2 cubic yards. The cover course was of stone measuring not less than 3 cubic yards.

#### WEST RIVER BRIDGE

The old wharf was reconstructed under contract. Bents of creosoted piles were driven at 8-foot centres through the old structure, and capped with 12- by 12-inch timber. Three walings were secured to the outside piles on the faces, the lower one being of 12- by 12-inch creosoted timber. Floor stringers of 6- by 12-inch timber were secured to the caps at 3-foot centres, and the top covered with 3-inch plank. The bents were braced with 4- by 10-inch timber, the faces of the new work double-fender-piled at 8-foot centres, and a new 8- by 8-inch guard was placed. The completed work has a length on its channel face of 138 feet, the outer 35 feet which forms a headblock being 41 feet wide. The approach is 22 feet wide.

#### WESTVILLE

As the old wharf had become obsolete, a new one was constructed under contract and is located a short distance to the eastward of the old wharf site. It has a shore approach, 104 feet long by 20 feet wide, and a pierhead, 100 by 40 feet. Both approach and pierhead have a solid pole foundation with square timber superstructure filled with ballast. The pierhead is floor-stringered and planked over, while the approach is graded with stone and gravel to make a roadway. The work is fender-piled at 10-foot centres, the piles around the pierhead being placed double, or one at each side of the projecting ends of the cross-ties.

#### WOOD ISLANDS

The outer portion of the south breakwater, which had been seriously damaged by ice and storms, was repaired. The broken or decayed 10- by 12-inch cross-ties, longitudinals, floor stringers, and 4-inch covering were renewed on the outer 260 feet, and the settlement in the stone ballast filling made up.

#### GENERALLY

Repairs were made to the following works:—

Bay Fortune, wharf; Belfast, wharf; Clifton, wharf; Franklyn Point, wharf; Lambert's, pier; Lennox Island, wharf; Miminegash Harbour, protection works and road construction; Nine Mile Creek, wharf; Pinette, wharf; Tignish, breakwater; Vernon River, south wharf; Victoria, wharf.

### NEW BRUNSWICK

#### ANDERSON'S HOLLOW

On the inner face of the outer block of the breakwater three sections, averaging 30, 36, and 25 feet long, respectively, were rebuilt with cribwork. New fenders and additional ballast were placed, stringers put in between the old ones, and 3- and 4-inch plank covering laid. A section of the wave-break, 45 feet long, was reconstructed at the outer end of the block, and the damaged and broken sheathing replaced on the seaward face. The roadway was widened, and the cribwork retaining wall on the lower side repaired.

#### BLACK'S HARBOUR

A cribwork block, 31 by 35 feet, was built in the angle between the approach and pierhead of the wharf. A portion of the old gravel surfacing was removed

from the original pierhead, and new stringers and plank covering were placed. A combined freight shed and waiting-room, 16 by 24 feet, was built at the outer end of the wharf, and the connecting span between the pierhead and the first cribwork block of the approach reconstructed. Minor repairs were made to the floating slip.

#### BRANTVILLE

A contract was entered into for the construction of a wharf. It has a stone embankment, 231½ feet long by 15 feet wide on top, ten round timber cribwork blocks, 15 by 20 feet on top, nine spans, 15 by 15 feet, an outer span, 15 feet long by 15 to 24 feet wide, and a cribwork pierhead, 31 by 41 feet on top.

#### BUCTOUCHE

Inside the pile section of the wharf 251 piles were driven and braced for a total length of 248 feet along the edge of the fill, and a section, about 250 feet long by 10 to 15 feet wide, was filled with stone and surfaced with gravel.

#### BURNT CHURCH

The old decayed caps, covering, stringers and upper round timbers were removed from the outer 517 feet of the block and span approach of the wharf. The outer span, 20 by 21 feet, was filled with cribwork and new round timbers were placed on the blocks. New 6- by 10-inch stringers were laid on both blocks and spans, and 3-inch creosoted hardwood plank and 8- by 8-inch caps placed on a length of 437 feet. The depressions in the shore block were filled with stone and surfaced with gravel.

#### BURTON

Along the upper side and outer end of the wharf, two sections of the old cribwork faces, 60 and 32 feet long, respectively, were removed to L.W.S.L., and replaced with concrete walls. A concrete floor was laid along the upper side on a section, 40 feet long by 10 to 20 feet wide. A new concrete slip, 12 by 16 feet, and a fender pier at the upper corner were built, and the stone-filled section was levelled.

#### BURTON COURT HOUSE

The old wooden sloping face along the upper side of the wharf, for a length of 106 feet, and the cribwork faces along the lower side of the pierhead, 47 feet in length, and along the approach, 65 feet in length, were removed and replaced with concrete walls. A concrete floor was laid over a section of the approach, 65 feet long by 15 feet wide, and over an area, about 260 square feet, to complete the concrete floor on the pierhead. The shore approach, for a length of 60 feet, was raised from 1 to 2 feet with stone and surfaced with gravel.

#### CAISSIE'E CAPE

A roadway, 1,380 feet long, extending from the public highway to the site of the proposed breakwater, was built, and a total length of 203 rods of woven wire fence, supported by cedar posts and extending along both sides of the roadway, erected. A contract was awarded for the construction of the breakwater and pier, and during the year some materials were purchased and delivered, but no work was done.

#### CAMBRIDGE

Around the sides and outer end of the wharf sixty-two piles were driven. The old cribwork faces, along the lower side and outer end, in lengths of 180

and 74 feet, respectively, were removed to L.W.L. and replaced with concrete walls supported partly on piles and partly on cribwork. Along the lower side of the wharf four concrete fender piers, and a stone wall, 29 feet long, were built, and a reinforced concrete floor, 165 feet long and 15 feet wide, was laid. Fenders were placed along the lower side and outer end of the wharf.

#### CAPE BALD

Large holes in the outer face of the breakwater were filled with concrete blocks. Outside this section four reinforced concrete caissons, 20 feet long, 10 feet high and 6 to 8 feet wide, were placed on levelled foundations, and the spaces between them and the breakwater filled with stone and covered with concrete. An additional caisson was also built. On a section of the approach, 90 feet long, two rows of new 8- by 10-inch stringers were placed between the old ones, and 4-inch plank covering was laid.

#### CLAIR

A contract was awarded for the construction of the substructure of the international bridge across the St. John river between Clair, N.B., and Fort Kent, Maine. It consists of a U-shaped abutment on the Clair side, 35 feet 5 inches at the face, 25 feet long on the side walls, and 26 feet 1 inch high to the top of the coping; a wing wall abutment on the Fort Kent side, 31 feet 10 inches at the face, with wings, 32 feet 4½ inches and 38 feet 3 inches long, respectively, and 37 feet 3 inches high to top of coping; and two piers, 30 feet 7 inches by 6 feet 7 inches on top, and 31 feet 2 inches and 28 feet 5 inches high, respectively. The Fort Kent abutment and the two piers are supported on pile foundations. Riprap was placed around the piers, the Fort Kent abutment, and along the bank in front of the Clair abutment. The superstructure was erected under another contract, and comprises three steel truss spans of an average length of 242 feet 8½ inches by a width of 23 feet 1 inch from centre to centre of trusses. Brackets were attached to the upper side of the bridge to support a sidewalk. Two farm roadways were constructed by day labour, one 125 feet long by 12 feet wide, under the bridge in front of the Clair abutment, and the other about 275 feet long by 9 feet wide, down a steep side hill from the highway to the meadows.

#### DAY'S LANDING

A concrete wall was built along the upper side of the pierhead of the wharf, a fender pier placed at the upper corner, a concrete floor laid and a new slip built. A concrete wall, in which there are three landings and steps for the use of small boats, was constructed along the upper side of the approach for a length of 128 feet. A strip of concrete flooring, 6 feet wide, was laid along the upper side of the approach, and the concrete floor shorewards from the pierhead was continued about 10 feet for a width of 30 feet. The interior of the shore section of the approach was raised with stone and surfaced with gravel.

#### DIGDEGUASH BASIN

A cribwork wharf was built having an approach, 105 feet long by 15.6 feet wide, stone-filled and surfaced with gravel, and a pierhead, 31 by 41 feet, covered with 3-inch plank. A vessel bed, 17 feet wide, was built along the face of the pierhead, and the roadway to the approach, 91 feet long and 16 to 20 feet wide, with side ditches and one cedar culvert, was graded.

## DIPPER HARBOUR

The old piles were removed from a section, 40 feet long, on the outer side of the pierhead of the breakwater, and this area was sheathed with 10- by 10-inch Douglas fir timber, 50 to 55 feet long. The old and decayed covering on the outer 110 feet was also removed, stringers inserted between the old ones, and a new 3-inch covering laid. New cap timber was placed along the outer end and inner side of the pierhead, and 10- by 10-inch top timber put on the wave-break. New fenders were placed at the outer corner of the pierhead, and the freight shed was repaired and painted.

## DOUGLASTOWN

The superstructure of the pierhead of the wharf was rebuilt and raised  $1\frac{1}{2}$  feet. The upper and lower faces were sheathed with 3-inch plank from about 2 feet below low water to the top of the cap, 3-inch covering was laid on two areas of 9 by 49 feet, and 19 by 22 feet, respectively, four new mooring posts were placed on the pierhead, and a round log stringer was laid across the span.

## EEL RIVER BRIDGE

A reinforced concrete covering, 6 inches thick, was laid over the cribwork block, a warehouse,  $10\frac{1}{2}$  by  $12\frac{1}{2}$  feet, built on the wharf, and a hand-derrick erected.

## ESCUMINAC

The construction of a section of the breakwater, comprising the westerly extension of the pierhead and the return or "L," commenced last year under contract, was completed. This section has a total length of 288.6 feet on the seaward face, a width of  $24\frac{1}{2}$  to 32 feet on top, and is of round timber cribwork, with faces of square timber sheathed with 3- and 4-inch creosoted plank.

## GAGETOWN

The old cribwork faces along the upper side, outer end and lower side of the high-water section of the wharf, 34, 44, and 34 feet long, respectively, were removed and replaced with concrete walls. A concrete floor was laid over the outer 30 feet, a new concrete slip and two concrete corner fender piers were built and fenders placed.

## GRAND ANSE

A solid fill was made of the inner 99 feet of the breakwater to replace the old decayed trestle work. A section of the breakwater, 190 feet by 16.8 feet, was filled with stone and surfaced with gravel, the best of the old plank removed from this section being used in repairing the covering of the outer portion. Part of the ice slope was repaired, and 550 cubic yards of large stone riprap was placed on the seaward face of the breakwater, and 120 cubic yards of small stone in the outer portion of the eastern groyne.

## LAMEQUE

A pier adjoining the lower side of the wharf was constructed under contract, and consists of a connecting block, 201.7 feet long, an approach, 719.5 feet long on the outer face, and generally 20 feet wide on top, with two triangular enlargements, 20 by 20 feet, and a pierhead, 47.4 long on the outside face, and 37 feet wide on top. The height of the cribwork varies from 10 to 23 feet, and is of open-faced construction sheathed on all faces, except the shoreward face of the connecting block, with 3-inch creosoted plank secured by 4-

by 8-inch untreated fenders and walings. A span, 17 feet long, was built in the approach. The pierhead is fully ballasted with stone and covered with 3-inch plank. The remainder of the pier is ballasted to 3 feet above low water, with an additional triangular section of ballast, 4 by 4 feet, along each side, and covered with 3-inch plank for a width of 10 feet. Under day labour one side of the roof of the warehouse, 30 by 90 feet, was reshingled, and the other side patched. The solid-filled section of the wharf was surfaced with gravel and the approach re-covered with 3-inch plank.

#### L'ETÊTE

A berth for a floating slip was excavated and levelled, and the slip built. It has a pontoon, 30 feet long, 15 feet wide, and 2 feet deep, constructed of 5-by 18-inch Douglas fir stringers covered with 3-inch creosoted plank, with a gangway, 42 feet long and 3½ feet wide. Three guide piles were driven and braced, and the floating slip was placed in position at the wharf. Minor repairs were made to the covering of the approach.

#### MAUGERVILLE

Along the front and sides of the high-water wharf piles were driven as a foundation for concrete walls. The old cribwork was removed, and the concrete walls, slip and fender pier were built. The interior was partly filled with stone.

#### MIDDLE ISLAND

A small landing wharf was constructed on the mainland, opposite the Island wharf. It is 148 feet long and has a stone embankment approach, surfaced with gravel, 64 feet long by 7 feet wide on top, and a cribwork block, 84 feet long by 7 feet wide on top, and 9 to 12 feet wide on the bottom. The block is covered with 3-inch plank and the sides and end are sheathed with 3-inch hardwood. A cribwork block, 16 feet long, 9 to 10 feet wide, and 8 to 9 feet high, was built to support the outer span of the wharf on the Island. The two upper tiers of the inner block were renewed, two new trestle bents, stringers and covering placed in the inner span, and the plank covering of the wharf was repaired.

#### NORTH HEAD

The stone filling of the inner 110 feet of the approach to the wharf was completed and surfaced with gravel. The old decayed covering was removed from the middle section, 305 feet long, and new cross-ties, stringers and covering were placed on this area. New cap timber, fenders and six mooring-posts were placed along the sheltered side of the approach for a length of 413 feet. The tops of the stringers, fenders, and mooring-posts were painted and general repairs made.

#### OROMOCTO

The old cribwork face, 60 feet long, on the lower side of the low-water wharf was removed to L.W.S.L. and rebuilt with a concrete wall, approximately 6 feet high. A concrete floor was also laid on the lower side, and stone placed along the sides of the approach. New covering, fenders, and two new mooring-posts were placed on the high-water wharf.

#### PALMER'S

*High-water Wharf.*—The concrete walls on the upper and lower sides of the pierhead were continued for lengths of 41 and 28 feet, respectively. They were built on a foundation of a double row of piles driven at 4-foot centre to

centre, and to the elevation of the flooring of the outer end of the pierhead. The concrete floor was continued shorewards over the pierhead. The approach, 116 feet in length, was widened generally to 30 feet with stone, and surfaced with gravel. The lighthouse was raised about  $2\frac{1}{2}$  feet and a cribwork foundation built under it. The freight shed, which was moved to a new location at the upper side of the approach, was repaired, shingled and painted.

*Low-water Wharf.*—The concrete floor on the low-water wharf was continued shorewards for a length of 50 feet, and a width of from 50 to 20 feet.

#### POINT DU CHÊNE

A reinforced concrete wall, 12 feet long and 7 to 8 feet high, was built across the inner end of the outer breakwater. Along a section of the outer face of the ballast wharf thirty creosoted close piles were driven. The two upper tiers of face timbers were renewed along this face and for 15 feet on the south-westerly end. Depressions in the surface of the wharf were filled with stone and the surface levelled.

#### POINT SAPIN

The outer face of the pierhead of the breakwater was sheathed with 6-inch hardwood for a length of 158 feet. A section of the approach, 105 feet long by 15 feet wide, was filled with stone and surfaced with gravel after removing the stringers and covering. The old worn and decayed covering over the remaining portion of the breakwater was repaired with 4-inch plank, and the roadway approach was levelled and ditched for a length of 125 feet. A section of the concrete wave-break was also repaired.

#### RICHIBUCTO BEACH

*North Breakwater.*—New pile breastworks, 5 feet wide,  $2\frac{1}{2}$  feet high at the back, and  $6\frac{1}{2}$  to 8 feet high at the front, were built for a total length of 352 feet. Sheathing was placed between the piles and the brace piles, and the interior filled with brush and stone.

*South Breakwater.*—About 315 cubic yards of stone, varying in depths from 1 to 5 feet, were placed in the outer 300 feet of the breakwater, and ten new piles were driven around the outer corner and end.

#### RICHIBUCTO CAPE

The work done on the breakwater consisted in renewing the face timbers at about L.W.O.S.T.; placing 6-inch creosoted sheathing in a section, 16 feet long, and additional ballast, vertical posts and walings in a section, 57 feet long, in the pierhead; raising and renewing the covering in a section, 30 by 50 feet; replacing several pieces of sheathing on the southern pier; and rebuilding the haul-up windlass. The roadway was graded, and the inner 165 feet of the breakwater approach was filled with stone and surfaced with the material excavated from the roadway.

#### ST. STEPHEN

The length of the warehouse was reduced from 60 to 45 feet, the sides were patched with shingles, and the outside painted. A new floating slip, having a pontoon, 30 by 15 by 2 feet, and a gangway, 42 feet long by 3 feet wide, was built, as well as a landing platform on the lower side of the wharf, 10 by 13 feet. A cribwork bulkhead, 102 feet long by 16 feet wide, was constructed along the upper side, and seventeen fender piles were driven along the outer side of the bulkhead. In a section, 86 feet long by 21 to 24 feet wide, sixty bearing piles were put in, and new pile caps, stringers and 3-inch covering laid.

## SHIPPIGAN GULLY

Along sections of the faces of the eastern breakwater fifty-one piles were driven and a section, 40 by 10 feet, was filled with brush and stone. On the eastern beach 1,600 lineal feet of breastworks were built, and ninety piles connected with cross-braces driven at the dam.

## STONEHAVEN

Concrete walls, 16 and 14 feet high, respectively, were built in sections, 94 feet long on the outer side, and 27 feet long on the inner side of the breakwater. A strip of reinforced concrete flooring, 10 feet wide, was laid along the outer side for a length of 97 feet. Hardwood sheathing, new cap and seven fenders were put on the outer face of the breakwater, 34½ cubic yards of ballast was placed in the interior, and 230 cubic yards of large stone at the northeast corner. A ramp, 40 feet long, extending from the highway over the inner end of the approach, was built, and 405 lineal feet of cap timber laid on the western pier.

## TABUSINTAC

The wharf was extended by building a cribwork block, 39½ feet long and 26½ feet wide, sheathed with 3-inch hardwood and connected with the old wharf by a span, 11½ feet long by 26½ feet wide. Cribwork blocks, 9 by 14 feet, and 8 by 14½ feet, respectively, were built to close the ends of the span in the old wharf, a ballast floor of old timber was laid in the span, and the interior of the span and the southerly block were filled with stone and surfaced with gravel.

## TRACADIE HARBOUR

The brush breastworks along the top of the beach were repaired for a length of 1,609 feet, and 5,766 feet of new breastworks were built in two rows, with pickets and brush.

## WATERBORO

The approach to the wharf was widened and raised about 2 feet, with stone and gravel, and the pierhead behind the plank section raised and levelled. Piles were driven at 4-foot centres along the lower side of the pierhead. Close piles were also driven shoreward from the inner corner of the pierhead, along the line of the proposed concrete wall, for a distance of 92 feet. A second row of piles, at 4-foot centres, was placed inside and parallel to the close piles and 4 feet distant, and about 507 cubic yards of stone was put in the approach.

## WELCHPOOL

A new gangway, 42 feet long and 3 feet wide, was built and placed in position. A pile was put under the platform, the railing around the landing repaired, and new yokes were placed on the pontoon of the floating slip. The gangway, the inside of the waiting-room, and the outside of the freight shed were painted. A guide pile for the floating slip was driven and braced to replace one recently broken. A new shed, 36 feet long by 16 feet wide, was built on the westerly side of the wharf.

## GENERALLY

Repairs were made to the following works:—

Barker's, wharf; Bass River, wharf; Bay du Vin, wharf; Brown's Flats, wharf; Campbellton, wharves; Caraqueet, wharf; Chipman, wharf; Chock-fish, breakwater; Cumming's Cove, wharf; Dalhousie, wharf; Edmunston,

bridge; Fairhaven, wharf; Fox's, wharf; Gooseberry Cove, wharf; Great Salmon River, breakwaters; Hampstead, wharf; Kennebecasis River, ferry landings; L'Etang, wharf; Little Lameque, wharf; Long Point, wharf; Lower St. Louis, wharf; McGowan's, wharf; Mill Cove, wharf; Moulies River, wharf; Neguac, wharf; Rothesay, wharf; St. Andrews, wharf; St. Charles River, wharf; St. John Harbour (Partridge Island), water main and wharf; St. Leonard, bridge; Shippigan, wharf; South Branch, wharf; Taylortown, wharf; Upper Maugerville, wharves; Welsh's Cove, wharf; West Branch, wharf; White's Bluff, wharf.

The following works were commenced, but were unfinished at the end of the fiscal year:—

Beaver Harbour, wharf reconstruction; Kouchibouguac, wharf construction; Seal Cove, breakwater extension; White Head, breakwater construction; Woodward's Cove, breakwater extension.

## QUEBEC

### AMOS

A round timber crib, 16 by 24 feet, was constructed to serve as part of the foundation for the freight shed which was moved a distance of 24 feet. An unloading platform, 64 by 16 feet, with a 16-foot slip, was also built on the wharf to facilitate the transfer of bulky freight from railway cars to the wharf.

### BAGOTVILLE

An extension, 340 feet long, was made under contract to the wharf. The new work consists of an open-faced stone-filled cribwork wall, 20 feet wide at the bottom and 10 feet wide at the top, provided with coping, railing, sheathing, fenders, mooring posts, and ladders. It was surfaced with macadam, and a concrete sidewalk, 10 by 300 feet, laid. The work done by day labour involved the installing of electric cables and electric light posts, renewing fenders on the front face of the headblock, and effecting minor repairs to the slip and gravel surface of the wharf.

### BAIE ST. PAUL (RIVIÈRE DU GOUFFRE)

The upper part of the eastern protection wall was repaired on a length of 385 feet, and its outer part extended for a length of 108 feet by placing a heavy riprap stone footing and rubble stone revetment. The footing of the western wall on a length of 130 feet was enlarged for a mean width of 10 feet and finished with a 2-foot heavy rubble stone revetment. At the downstream end the wall was extended for a distance of 205 feet with a stone riprap footing and a heavy rubble stone revetment. The footing of the south wall was also repaired by adding some stone riprap. The work was done by contract.

### BELCEIL STATION

The facing of the guide pier and breaker, for a length and width of 21 feet, was rebuilt in concrete to a depth of 8 feet, steel rods and steel reinforcement being used in the concrete.

### BERTHIERVILLE

*Icebreakers.*—The two icebreakers built in 1897 on the shore of the river St. Lawrence in front of the upper part of the town were rebuilt in reinforced concrete. These structures are 21 by 27 feet at the base, 9 feet by 14 feet 4 inches at the top, and 20 feet high.

*Protection Wall.*—To prevent the steamers' surge eroding the river bank, a stone protection wall was built along the shore for a length of 600 feet from the Government wharf to Doucet street. It is of dry stone, 2·5 feet thick at the top, 7·5 feet high, and 4 feet 3 inches to 5 feet 1½ inches thick at the base, vertical at the back, and inclined 1 to 4 on the outer face.

*Wharf.*—General repairs were made to the concrete flooring of the approach, and minor improvements to the shed.

## BIC

The work done consisted in the completion of the widening of the head-block of the wharf and ballasting same. Sheathing was put on for a length of 135 feet by a height of 16 feet, 209 lineal feet of face timbers and 240 lineal feet of stringers were laid in place, and the widened section was planked over. A freight shed was also built and painted.

## BLACK CAPES

A protection pier, 132 feet long and 6·5 feet high, built in round timber, ballasted and sheathed on the sea side, was constructed on each side of a small creek where the fishermen harbour their boats. The descent to the beach at Carry's Hill was rebuilt, and the lower portion protected and reinforced by a cribwork pier, 120 feet long and 8 feet high.

## BOIS BRULÉ

An open-faced cribwork, 20 feet long, 14 feet wide and 9 feet high, was built with a skidway, 60 feet long.

## BONAVENTURE

The superstructure of the wharf was rebuilt upon a length of 465 feet by the width of the wharf, and involved the renewal of all upper longitudinals and cross-ties, stringers, flooring and cap pieces.

## CABANO

The wharf was repaired by renewing 20,000 feet b.m. of 3-inch deals and 1,000 feet b.m. of 10- by 10-inch stringers in the flooring, and 3,000 feet b.m. of 8- by 8-inch railing. A shed shelter, 26 feet square, was constructed and the electric lighting system completed. The shed and railing were painted.

## CACOUNA

The wharf flooring was renewed on a width of 4 feet with 30,000 feet b.m. of 3-inch plank, and the stringers on the same width with 16,000 feet b.m. of 10- by 12-inch timber. The cap piece was renewed for a length of 238 feet, after which the whole cap piece, as well as the railing and freight shed, were painted.

## CACOUNA EAST

An extension, 90 feet long, was made to the wharf. It is composed of two open-faced cribwork piers, 25 feet long by 18 feet wide, connected by two spans each 20 feet long.

## CANNES DE ROCHES

A roadway, 2,000 feet long by 16 feet wide, was built from the wharf to the public road. A breastwork, well secured to the top part of the pier, was constructed for a length of 104 feet by a height of 5 feet 6 inches.

## CAP AUX OS

A wharf section, 75 feet long, 22 feet wide and 10 feet high, with a breast-work along the shore, 170 feet long, was built, and 400 feet of roadway made.

## CAP CHAT

The flooring and stringers of the wharf, for a distance of 600 feet by a width of 21 feet, were renewed.

## CAPLAN RIVER

The work done consisted in building an extension to the east pier, 100 feet long, 16 feet wide, and 12 feet high. It is of round timber open-faced stone-filled cribwork and sheathed. Repairs were made upon 85 feet of the cribwork of the old portion. Repairs were also carried out on the west pier for a length of 175 feet by rebuilding the southwest corner at the outer end, and renewing a portion of the sheathing, the cap piece and flooring.

## CAP ST. IGNACE

To improve the stranding berth on the northeast side of the wharf, the bottom of the river alongside the northeast face of the headblock, on a length of 88 feet by a width of 25 feet, was levelled, involving the removal of about 50 cubic yards of clay. Repairs were made to the wharf by renewing 6,000 feet b.m. of 12- by 12-inch face timbers, 7,000 feet b.m. of 10- by 12-inch floor stringers, 12,000 feet b.m. of 3-inch flooring, 3,000 feet b.m. of 3-inch sheathing and 2,000 feet b.m. of 6-inch sheathing.

## COLONIE DES GRÈVES

A 6-inch surface of gravel was laid on the wharf approach and on the riprap on each side. To prevent the erosion of the riprap and the filling of the basin, twenty piles were driven along the downstream side of the approach near the headblock.

## CÔTE STE. CATHERINE

The headblock was rebuilt in concrete, the cribwork being removed down to low water level, and a concrete wall, 3 feet thick at the base, 2 feet thick at the top, and 5 feet high, built all around. The approach was widened on the upstream side from 15 to 20 feet, and a new stone riprap along the same side built for a length of 95 feet on the downstream side. The inclined roadway leading from the public road to the wharf was widened and levelled.

## CROSS POINT

The planking of the landing slip, upon an area of 40 by 70 feet, was renewed with 4-inch plank. A plank sidewalk was built along the west face of the wharf for a length of 525 feet, and attached to the wharf by wooden brackets. The waiting-room was painted and reroofed, 100 lineal feet of face timbers were renewed on the east face of the wharf, and minor repairs made to the planking.

## D'AIGUILLON

A crib and span extension, 100 feet long, was built to the breakwater-wharf and consists of two cribs, each 30 feet long, 22 feet wide, and 14 feet high, with 100 feet of decking.

## DES JOACHIMS

The old cribwork wharf, which had been transferred to the Crown, was demolished and rebuilt. The wharf is now 80 feet long by 22 feet wide, with

a wooden approach, 57 feet long by 16 feet wide, and an earth and stone approach, 16 feet wide on top and 28 feet long. The structure is built to elevation 8 feet above low water, and draws 9 feet of water at the landing face.

#### DOLBEAU (GROSSE ROCHE)

The floor stringers, flooring and sheathing of the wharf were renewed where necessary. The roof and sheathing of the freight shed was repaired, and a slipway, 10 by 45 feet, built in the headblock.

#### DOUCET'S LANDING (STE. ANGÈLE DE LAVAL)

Under contract the high level wharf was razed and reconstructed by building a close-faced cribwork, 181 feet long, 22 feet wide, by 16 feet high, provided with mooring posts, slip, corner protection, steel plates, etc. The full length of the wharf approach, 707.5 feet, was reconstructed by driving all along the east face of the approach 12- by 12-inch tongued and grooved sheet piling, provided with bracings, walings, fenders, etc. The sheet piling was tied to the old approach with steel rods anchored to concrete blocks. The space between the sheet piling and the old approach was filled with stone. The roadway approach on its whole length was widened by levelling with stone and gravel, the present width being from 44 to 49 feet, with 70 feet at the auto-bus station. The work under contract was practically completed. A movable landing slip was built by day labour to give better accommodation to the boats plying between Ste. Angèle and Trois Rivières, and a toilet was built on the wharf. A movable landing platform, 100 feet long by 15 feet wide, resting on trestle work, was built under agreement in order to enlarge the high level wharf during the spring to afford better accommodation for vehicular traffic.

#### DOUGLASTOWN

An extension to the wharf, 200 feet long by 22 feet wide, was built by contract.

#### EAST TEMPLETON

Extensive repairs were made to the wharf by building a round timber crib, 20 by 13 feet, in the landing head, replacing forty stringers and 1,400 feet b.m. of flooring in the landing head and approach, renewing twenty pieces of 6- by 6-inch sheathing in the icebreaker, and painting the steel beams, columns and freight shed.

#### FABRE

In the northwest corner of the wharf, which had been damaged by ice shove, twelve piles, together with the stringers, pile caps and part of the flooring, were renewed.

#### FATHER POINT

A break in the wharf was repaired by driving a protection pilework upon 125 feet of the west face. A two-story wooden shed, 50 by 25 feet, was built on a concrete foundation a few feet west from the shore end of the wharf, and a cribwork protection, 100 feet long, 10 feet wide and 11 feet high, constructed. Minor repairs were also made to the wharf, one old shed was moved to the other end, and the two others dismantled.

#### FAUVEL

A protection pilework was driven around the headblock of the wharf, and a length of 100 feet at the outer end was levelled and built upon a height of 18 inches, a new cap piece being laid. The landing slip was rebuilt, and the planking of the whole wharf generally repaired, new stringers being laid where necessary.

## GASCONS

The work done during the year consisted in rebuilding a 100-foot length of the old wharf from L.W.L. to the top. The timbers, upon a length of 50 feet, were renewed from L.W.L. to the top. Boulders, lying just off the structure, which endangered the safety of fishing boats, were removed. The outer portion of the flooring of the newer breakwater-wharf was replaced and the fenders and sheathing were partly renewed on the west face.

## GASCONS WEST

An extension to the east pier, 150 feet long by 8 feet high, was built in round timber open-faced, stone-filled cribwork. The mouth of the river near the pier was cleaned of loose boulders and stones which endangered navigation.

## GASPÉ

A pile wharf, 91 feet long by 34 feet wide, was constructed by day labour.

## GRANDE BAIE

The flooring of the wharf was reinforced over nine bridges by adding new floor stringers, renewing 15,000 feet b.m. of 3-inch deals, and 1,000 feet b.m. of 8- by 8-inch railing along the inner end.

## GRAND ENTRÉE

A training pilework pier was constructed, and minor repairs made to the wharf. A portion of the wharf, 60 feet long by 28 feet wide, was raised 3 feet.

## GRAND'MÈRE

An open-faced cribwork wharf, fully ballasted with stone, 50 feet long by 35 feet wide, 8 feet high above low water and 9 feet below, was built. The wharf was sheathed and floored with 3-inch deals, and provided with mooring posts. An approach was built at the rear of the wharf and is protected by a stone riprap, and fenced with cedar posts and steel wire. A wooden freight shed, 12 by 16 feet, was built and placed on the wharf. The shed is provided with double doors and roofed with galvanized iron sheets. The outside woodwork was given two coats of paint.

## GRANDES PILES

The top row of cribwork of the wharf was removed and rebuilt to raise the wharf 2 feet on its whole length. The new cribwork was fully ballasted with stone and surfaced with gravel.

## GRANDE RIVIÈRE

The work done consisted in building a training work, 500 feet long, 10 feet wide, and 6 to 9 feet high, composed of fascines, mattresses and spruce anchoring piles.

## GRANDE VALLÉE

A crib structure, 75 feet long, 30 feet wide, and 16 feet high, with a breast-work 300 feet long, was built by day labour.

## GRINDSTONE

The wharf was raised 2 feet for a distance of 300 feet, ballasted with 300 cubic yards of stone and redecked. Minor repairs were made to the shed and roadway.

## GRONDINES

A contract was awarded to construct an extension to the wharf. A close-faced cribwork substructure, 100 feet long by 32 feet 6 inches wide, and built to 3 feet above low water level, was erected and filled with stone. On this foundation a concrete superstructure was built, and has two parallel concrete walls, 100 feet long, spaced 30 feet apart, and one front wall, 30 feet long. The width of the top of the walls is 1 foot 6 inches, and the base, 7 feet, with a height of 15 feet 4 inches. The space between the walls was filled with one-man stone and covered with a 1-foot bituminous macadam pavement. The extension was provided with a wooden slip, 36 feet long, 9 feet high, and 10 feet wide, also mooring posts, mooring rings, ladders, steel protection corner plates, etc.

## GROSSE ISLE

The eastern slip was reconstructed, the western slip repaired, and the wooden flooring, for a length of 115 feet at the shore end of the wharf, replaced by one in concrete. Minor repairs were made to the balance of the wooden flooring and to the stringers.

## HAVRE ST. PIERRE

The work done consisted in renewing 15,000 feet b.m. of 3-inch wooden flooring, and placing 556 cubic yards of stone in the headblock of the wharf and 15,000 feet of sheet piling.

## HUDSON

The reconstruction in concrete of the wharf, 102 feet long by 22 feet wide, commenced under contract last year, was completed. The crib and stone filling were removed to low water level and replaced by a concrete wall 10.5 feet high, 5 feet thick at the base, and 12 inches thick at the top. The top of the wharf was then levelled, and a concrete flooring laid on the whole surface.

## ILE PERROT NORD

The bituminous macadam surfacing of the roadway leading from the public road to the wharf was completed. The old concrete sidewalk, 162 feet long, was torn up and a new one built for a length of 66 feet. The fence along the roadway was renewed on a length of 120 feet.

## ILE PERROT SUD

The reconstruction of the wharf in concrete, commenced in 1928, was completed. The cribwork was removed down to low water level, and replaced by a concrete wall, 7 feet high, 3 feet thick at the base, and 12 inches thick at the top. The stone filling of the headblock was completed to the necessary level, and a 6-inch concrete flooring laid on the whole surface of the wharf. The wharf is 80 feet long by 35 feet wide, with a landing slip and steps.

## ISLE VERTE

To strengthen the flooring the stringers in the headblock of the wharf were reinforced, involving the use of 15,000 feet b.m. of 10- by 12-inch timber. In the wharf near the head-block 8,000 feet b.m. of 3-inch flooring was renewed, and a length of 260 feet near the approach surfaced with gravel.

## ISLE VERTE (RIVIÈRE DES VASES)

The north corner of the outer wharf was rebuilt, 90 feet of railing renewed, and the surface of both wharves regraded with gravel.

## JUBINVILLE (LAC LABELLE)

The wharf known as Jubinville wharf was reconstructed. The landing head is 30 by 30 feet; the cribwork approach, 30 feet long by 16 feet wide; and the stone and earth approach, 98 feet long by 16 feet wide. A freight shed, 9 by 16 feet, was constructed on the landing head, and a floating platform, 16 by 30 feet, was built for the use of small launches.

## KAMOURASKA

A contract was awarded to repair the upstream wharf. The flooring on a mean length of 176 feet was torn up, the rock surface on both sides cleaned, two gravity concrete walls, 105 feet long, constructed, and the space between the walls and the rest of the approach filled with stone and surfaced with 1 foot of gravel. Two ladders and six cast-iron mooring posts were installed.

## LA BUTTE

A round timber open-faced stone-filled protection cribwork was built. It is 800 feet in length by 26 feet in width and 2.5 feet in height.

## LACHINE

During the year six bumper posts were rebuilt in reinforced concrete. Four of the posts extend 6 feet above the wharf, 4 feet below the flooring, and are 2 by 2½ feet at the top and 13 by 2½ feet at the base. The other two are 2 by 2½ feet at the top and 12 by 12 feet at the base. The front and outside faces are protected by steel plates, 6 by 6 feet.

## LAC MÉGANTIC

The work done consisted in constructing a concrete capping, 2 feet wide by 1 foot thick, along the top of the protection wall, for a length of 412 feet, repointing joints on the front face, and surfacing with gravel, on an area of 1,800 square yards, the backfilling made previously.

## LAKE TIBLEMONT

A wharf was constructed and has a round timber open-faced cribwork landing head with three cribs, 16 feet by 16 feet, joined by a 16-foot span, and a stone and earth approach, 60 feet long by 16 feet wide, with riprap side walls. A small freight shed, 16 by 16 feet, on a cribwork foundation, was also built.

## LANORAIE

The wharf was damaged by ice, necessitating urgent repairs. The 8-inch concrete flooring on the headblock was renewed, and the concrete icebreaker rebuilt. Minor repairs were made to the front, back, and downstream walls of the headblock.

## L'ANSE À LOUISE

A contract was awarded for the building of a wharf, 600 feet long by 20 feet wide. The work is in progress. To keep the river in its proper channel and to protect the beach, a breastwork, 90 feet long, was built.

## L'ANSE AU BEAUFILS

The outside right-hand crib, some 100 feet long, was rebuilt from low tide level to the coping, and 327 cubic yards of stone ballast placed inside. A breastwork, 40 feet long, was constructed on the east side to stop the sand from filling up the channel.

## L'ANSE ST. JEAN

An extension was made to the wharf by constructing a pile headblock, 100 feet long by 40 feet wide. The superstructure of the outer end of the wharf was reconstructed on a length of 124 feet by a height of 5 feet 3 inches, and the freight shed and waiting-room were repaired. The work was done by contract. Under day labour flooring and stringers were renewed for a length of 144 feet by a width of 26 feet, and a small guard was placed on each side at the head of the slip.

## LAPRAIRIE

The concrete slope of the dyke was rebuilt in different places for a height of from 6 to 22 feet, and on a total length of 890 feet. The concrete foundation was also rebuilt for a length of 200 feet by a width of 3 feet and to a depth of 6 feet. The river side concrete walls and flooring of the Ruisseau Chauville culvert of this dye were also reconstructed.

## LE FILS (BONAVENTURE)

An extension, 87 feet in length by 15 feet in width and 13 feet in height at the outer end, was built in round timber open-faced cribwork, ballasted with stone, sheathed and covered. It has two mooring posts, two ladders and mooring rings. The older portion of the breakwater from the shore to the outer end was raised from 18 inches to 5 feet, a new cap piece and two mooring posts being placed, and 25 cubic yards of stone were put in the old wharf.

## LES ESCOUMAINS

Part of the wharf was reconstructed under contract. An open-faced cribwork structure, 175 feet long, 30 feet wide at the top by 31.7 feet high, was built and sunk in 16 feet of water at low tide, 25 feet distant from the undamaged portion of the old wharf, this space being spanned by a wooden bridge. The new crib is decked with a 3-inch flooring and is protected by fifty fenders and walings. It is provided with ten mooring posts and four ladders. A small concrete retaining wall of 70 cubic yards was also built at the shore end of the approach.

## L'HOPITAL (LAPEYRÈRE)

A cribwork wharf, 100 feet long, 20 feet wide, and 8 feet high, was built with a stone approach, 100 feet long, 20 feet wide, and from 4 to 7 feet high. A breastwork, 250 feet long, was also constructed along the river.

## L'ISLET

The coping, railing and sidewalk on a length of 150 feet, along the east side of the shore end of the wharf, was demolished and replaced by a concrete wall, 4 feet thick, with a concrete coping and sidewalk. The wooden flooring, on an area of 150 square yards on the northwest side of the small wharf, was renewed and ballasted. On the remainder of the wharf 2,000 feet b.m. of 3-inch flooring was renewed, and 75 square yards of the road gravelled. The work was done by contract.

## LOUISEVILLE

The old pile wharf was demolished and reconstructed in reinforced concrete. The new structure is 101 feet long with a 42-foot return wall at each end. The substructure consists of a composite reinforced concrete sheet piling, 12 inches thick, with 12- by 12-inch reinforced concrete piles driven at every 6 feet 8 inches, centre to centre, in front of the sheet piles. The bearing and

sheet piles extend to 4 feet above the extreme low water level, at which elevation they are incorporated into the superstructure which consists of a reinforced concrete wall or beam, 8 feet high, with buttresses every 20 feet. At each buttress there is a tie, anchoring the front wall to an anchor beam, 40 feet behind. The ties and the beam are supported by 12- by 12-inch reinforced concrete piles. The work was done by contract.

#### LOWER MIGUASHA

The cribwork structure which was commenced last year was completed. Fenders and cap pieces were laid upon a length of 200 feet on both faces of the structure, and the outer end was completed and filled with ballast.

#### MAL BAY

The work done during the year consisted in driving 8-inch hewed spruce sheathing for a distance of 225 feet on the east side shore end of the wharf, and putting in binders at every cross-tie to reinforce the wharf. A concrete wall, 45 feet long, 4 feet wide, and 5 feet high, was built on the east side of the approach to keep the gravel from being washed out, 400 cubic yards of stone ballast was put in the wharf, and 150 cubic yards of stone riprap placed on the outside of the east side.

#### MARSOUINS

A small wharf, 75 feet long, 27 feet wide and 22 feet high, was built a short distance from the eastern end of the jetty on the eastern shore of the mouth of the Marsouins river.

#### MATANE

*Town Wharf.*—Under contract the following works were carried out: 316 protection piles were driven along the west face of the outer portion of the wharf; a new 3-inch flooring was laid over the old flooring of the outer portion, and the 3-inch flooring of the inner portion was removed and replaced by new flooring; and 553 lineal feet of stringers were renewed. Under day labour minor repairs were made to the wharf.

*East Breakwater.*—The superstructure of the east breakwater was rebuilt upon a length of 140 feet by a width of 27 feet and a mean height of 3 feet. The outer end of the last-built portion of the breakwater was reinforced by placing 18-foot hardwood 10- by 10-inch fenders upon a length of 37 feet and laying eight 4-inch steel straps, 10 feet in length, on both corners.

*West Breakwater.*—Under contract the west breakwater was extended 300 feet, 5,592.5 cubic yards of cribwork being built. A protection cribwork with a brush foundation was constructed to stop erosion between the breakwater and Cap aux Pilotes, and 484 protection piles were driven alongside the east face of the breakwater. The south end of the west breakwater was also rebuilt upon a length of 15 feet.

#### MÉCHINS

The covering of the wharf was rebuilt upon a length of 104 feet and a width of 27 feet, by placing stone ballast to a height of 1.6 feet and topping the stone with 6 inches of coarse and fine gravel. The flooring of another portion of the wharf was replaced with 4-inch deals upon a length of 125 feet by a width of 24 feet, 160 lineal feet of 10- by 10-inch stringers being renewed. The plank-ing of the widened section of the wharf was also renewed upon an area of 100 by 15 feet. The southwest corner and south face of the widened portion of the cribwork were rebuilt for a height of 15 feet by a length of 12 feet, face timbers being replaced and new sheathing laid. The north face was also repaired and

resheathed upon a length of 15 feet. In the main wharf eight fenders, two mooring posts, two ladders, and 56 lineal feet of cap piece were renewed. The road approach to the wharf was levelled and gravelled. A contract was entered into for the construction of a 200-foot extension to the wharf. The materials are being procured but no work has been done.

#### MIGUASHA

The work done consisted in driving fifty protection piles at the head of the wharf and replacing some of the face timbers. A 100-foot length of the shore end portion was replanked, the stringers renewed, and the top reballasted for a height of 2 feet.

#### MILLE VACHES

The floor stringers over the nine passes, and the fenders on the southeast corner of the headblock were renewed. Repairs were made to the 3-inch flooring, and the 3-inch sheathing at the east end of the headblock.

#### MOISIE

The bank protection wall was extended for a distance of 306 feet downstream from the portion done last year, and 270 feet upstream. This protection wall consists of 15-foot piles driven at 4-foot centres at high water mark. The piles were solidly braced at the back, and at the front two horizontal 12- by 12-inch walings were placed with a 4-inch yellow birch sheathing.

#### MONT LOUIS

A triangular landing pier with a landing surface, 108 feet long, was built and repairs were made to the protection wall along the roadway leading to the old wharf.

#### MONTMAGNY

The upper twelve tiers of the north end of the headblock, on an area of  $49\frac{1}{2}$  by 59.2 feet, were renewed and involved the demolition of 260 square yards of floor stringers and 945 cubic yards of old crib, which was rebuilt with new material. Fenders, for a length of 617 feet, were placed and secured, as well as 35 feet of walings, and four new mooring posts. The work was done by contract. The work done by day labour consisted in replacing some 1,500 feet b.m. of yellow birch sheathing, 2,300 feet b.m. of 3-inch deals in the wooden sidewalk, repairing the shed and painting the waiting-room.

#### MUCK COVE

A small landing pier, 20 feet long, 20 feet wide and 12 feet high, was built by day labour.

#### NATASHQUAN

The extension to the wharf, 150 feet long by 30 feet high at its outer end at low tide, which was commenced last year under contract, was completed. The work involved the construction of 5,283 cubic yards of crib, 500 square yards of 3-inch flooring, 330 lineal feet of railing, forty-six hardwood fenders, 572 lineal feet of hardwood walings, six mooring posts and one ladder. The outer part of the wharf was also repaired, and consisted in filling this section with 250 cubic yards of stone, renewing 12,000 feet b.m. of 3-inch spruce flooring, 1,000 feet b.m. of 10- by 10-inch fenders, 500 feet b.m. of 10- by 10-inch walings, and 2,000 feet b.m. of 10- by 10-inch railing. Minor repairs were made to the shed.

## NEW CARLISLE

The planking of the shore end portion of the wharf was repaired and a few stringers renewed where necessary. A round timber open-faced stone-filled cribwork pier, 40 feet in length by 20 feet in width, and 8 feet in height, was constructed near the Billingsly road in order to permit the landing of fish.

## NEWPORT

A crib, 75 feet long, 16 feet wide and 8 feet high, was built to close the old outlet of the river. On the west side of the new outlet a crib, 100 feet long, 22 feet wide and 12 feet high, was constructed with a breastwork, 150 feet long. Minor repairs were made to the jetty on the east side of the entrance. Two open-faced cribs, each 24 feet wide, one 14 feet high and the other 16 feet high, were built in the 100-foot gap of the old breakwater-wharf. A new deck was laid for a length of 120 feet, general repairs were made to the cribwork, and sheathing was driven on the east side for a distance of 150 feet.

## NEW RICHMOND

The work done during the year consisted in renewing the 3-inch flooring of the wharf, upon a length of 800 feet by a width of 20 feet, and repairing the remainder of the flooring with the best planks removed from the renewed portion.

## NORWAY BAY

Sixteen cribs of the wharf approach were rebuilt up from the low water line, and fully ballasted.

## PAPINEAUVILLE

The repairs made to the wharf consisted in reconstructing 156 lineal feet of the high level approach, comprising six cribs, 10 by 16 feet, and six platforms, 16 by 16 feet. A new flooring was laid, and the cribs were fully ballasted.

## PASPÉBIAC

An extension to the wharf, 75 feet in length by 25 feet in width, sheathed on the west or outside face with seventy-six round piles, was constructed under contract. The structure is of open-faced round timber stone-filled cribwork. Under day labour general repairs were made to the main wharf and the store shed near the wharf was repaired and painted.

## PEEL HEAD BAY

A 6-inch concrete floor was laid on the stone approach for a length of 240 feet, and a concrete sidewalk, 170 feet long by 3 feet wide, built along the right of way to the wharf.

## PENINSULA

An open-faced cribwork wharf, 115 feet long, 21 feet wide and 12 feet high, was built and sheathed under day labour.

## PÉRIBONKA

New piles, well braced, were placed in eleven bents of the trestle approach of the wharf, and some of the other bents were ballasted with 277 cubic yards of stone. The corbels, floor stringers, 3-inch flooring, and railing over a section, 110 feet long by 20 feet wide, were renewed.

## PETIT BONAVENTURE (ST. SIMÉON)

An extension to the wharf, 80 feet in length by 20 feet in width, was built in line with and at a distance of 75 feet from the headblock of the breakwater. The new structure is of round timber open-faced stone-filled cribwork, covered and sheathed with 3-inch deals.

## PETITE RIVIÈRE AU RENARD

A crib, 75 feet long, 21 feet wide, and 12 feet high, with a breastwork, 100 feet long, was built at the entrance of the river on the north side, and on the south side a second crib, 46 feet long, 21 feet wide, and 12 feet high, was also constructed. In the river past the bridge, a breastwork, 183 feet long, was constructed with a crib 55 feet long, 7 feet high, and 8 feet wide.

## PETITE RIVIÈRE EST

The construction of a breakwater under contract, which was commenced last year, was completed. It is an open-faced cribwork structure, 300 feet long by 27 feet wide, with a batter of 1 in 8 on both sides.

## PHILLIPSBURG

The work done consisted in filling with stone 124 feet 2 inches of the approach, and building two new piers, 12 by 14 feet, near the headblock. Minor repairs were made to the wharf, and the flooring was replaced.

## POINTE AU PIC

A contract was awarded to reconstruct the downstream part of the headblock and repair other parts of the wharf. The work done consisted in reconstructing 1,500 cubic yards of cribwork, 356 square yards of flooring, 817 lineal feet of 12- by 12-inch rock elm fenders and walings, 883 square yards of 4-inch yellow birch sheathing, and 263 lineal feet of 12- by 12-inch coping; placing two new ladders and ten mooring posts; and renewing 3,900 feet b.m. of 12- by 12-inch face timbers. Under day labour a 10-foot length of the concrete sidewalk was cut off to improve traffic facilities, 3-inch lumber was laid between the rails of the siding, and urgent repairs were made to the framework of the hoisting apparatus and to the macadam surface.

## POINTE CLAIRE

A stone riprap was built along the upstream side of the wharf and approach. Extensive stone filling and levelling was made on the whole length and width of the approach, to bring its top surface to 8 feet above L.W.L.

## POINTE FRÉGATE

A wharf, 115 feet long, 30 feet wide, and 12 feet high, was built and well ballasted with stone and gravel.

## PORT DANIEL

The superstructure of the wharf was rebuilt upon a length of 180 feet, by a width of 20 feet, and a height of 6 feet, ties, stringers, planking and cap pieces being replaced. The freight shed was also rebuilt and painted, the hill approach gravelled and graded, and drain ditches cleaned and deepened.

## RIMOUSKI

The work done during the year consisted in replacing 2,775 lineal feet of 10- by 12-inch stringers, 135 ties, 22 feet in length, and the 4-inch planking

upon a length of 575 feet by a width of 33 feet, in the portion of the wharf near the shore; driving 105 protection piles along the west face of the shore end portion of the wharf; renewing seventy-two 8-inch sheathing pieces, 24 feet in length, on the west face of the newer portion of the wharf; replacing eight mooring posts, 12 feet in length; raising the railroad siding upon a length of 600 feet on the filled-in area of the outer portion of the wharf; renewing the 4-inch planking upon areas of 56 by 14 feet and 40 by 16 feet in the outer portion of the older wharf; and levelling the gravel and sand filled-in areas between the north portions of the older and newer wharves. At the wharf aerodrome minor repairs were made to the hangar, 1,300 lineal feet of drain tiles were replaced where necessary, and new fences built upon a length of 4,320 feet. Levelling and filling in were also done where most urgently required.

#### RIVIÈRE BLANCHE

A portion of the headblock of the wharf, 65 feet in length, by a width of 15 feet, and a height of 18 feet, was rebuilt by renewing all ties, face timbers, sheathing, stringers and flooring. An area of 24 by 15 feet of the 4-inch flooring was also renewed in the east portion of the headblock, the stringers being replaced.

#### RIVIÈRE DU LOUP (EN BAS)

The work done consisted in renewing 125,800 feet b.m. of floor stringers, 144,800 feet b.m. of 3-inch flooring and sheathing, 24,000 feet b.m. of 10- by 10-inch cross-ties, and some 6-inch hardwood sheathing on the front face of the wharf. The movable slips were rebuilt, and the sheds, railing and cap pieces painted.

#### RIVIÈRE NICOLET

A stone riprap protection wall was built along the east side of the Nicolet river, where a landslide had carried into the river a portion of the public road leading to the Government wharf. The wall is 524 feet long, resting on two rows of piles, spaced at every 4 feet, longitudinally and transversally. The rear of the stone riprap was filled with sand from the bottom to the elevation of the roadway.

#### RIVIÈRE OUELLE

The wharf was repaired by renewing 10,700 feet b.m. of 6-inch yellow birch sheathing, 11,800 feet b.m. of 3-inch spruce sheathing and flooring, one ladder, some 500 lineal feet of railing and two mooring posts. The railing and sheds were painted.

#### RUISSEAU LEBLANC

The southwest corner of the wharf was reinforced with new face timbers and fenders, and an area of 15 feet in length by the height of the wharf was also strengthened with inside vertical binders. A new cap piece was laid on all faces of the breakwater and painted, and four new ladders were built in place.

#### ST. ANDREWS

The wharf, which is 50 feet 2 inches long by 49 feet 3 inches wide at one end and 49 feet 9 inches wide at the other, was rebuilt in concrete under contract. The crib structure around the two cribs was removed down to L.W.L. and replaced by a concrete wall, 10 feet 8 inches high, 5 feet thick at the base and 1 foot thick at the top. The 14-foot gap between the two cribs was spanned with five 18-inch steel I beams and the whole surface of the wharf covered with a 6-inch concrete flooring.

## STE. ANNE DES MONTS

A 2-inch plank roadway, 15 feet wide, was laid on the wharf for a distance of 900 feet, and a protection breastwork built at the outlet of the river.

## STE. ANNE DU LAC

A dry stone protection wall, 265 feet long, 3 feet wide at the top, 8 feet wide at the bottom, and 7 feet high at the back, was built. On the lake side it is vertical for a height of 2 feet, the balance of face having a batter of 1 in 1.

## ST. ANTOINE

The reconstruction of the wharf consisted in removing the crib and stone filling around the wharf and building a concrete wall,  $4\frac{1}{2}$  feet thick at the base, 1 foot thick at the top, and  $10\frac{1}{2}$  feet high. The whole surface of the wharf was levelled with stone, and a 6-inch concrete floor laid. A stone foundation was built underneath the shed.

## ST. CHARLES

The reconstruction of the stone-filled pile cribwork wharf, which was commenced in 1928, was continued. During the year a section, 47 feet long, was rebuilt, the new crib being 21 feet high in front, 14 feet at the back, and 24 feet wide.

## ST. CHARLES DE CAPLAN

A portion of the 4-inch sheathing on the east face of the wharf was renewed upon a length of 350 feet and for a height of 14 feet. The sheathing on the west side was repaired, 2,000 feet b.m. of 4-inch planking being used. The flooring was also repaired where most urgently required. The descent to the beach at Jos. Babin's property was gravelled and graded, and the small cribwork protection at the foot of the descent was repaired and reballasted. The work done at Côte Robichaud during the year consisted in building an extension to the breakwater of round timber open-faced stone-filled cribwork, sheathed and covered with 3-inch deals. It is 75 feet in length by 21 feet in width and 14 feet in height, with a landing slip, 18 feet long by 6 feet wide. The old portion was partly reballasted with 35 cubic yards of stone. At Ruisseau Watt a round timber open-faced stone-filled cribwork breakwater, 50 feet in length by 18 feet in width and 11 feet in height, was constructed.

## ST. ELOI (POINTE À LA LOUPE)

Some 14,000 feet b.m. of floor stringers and 12,500 feet b.m. of 3-inch flooring were renewed in the wharf, and the approach regraded with 160 loads of gravel.

## ST. ETIENNE DE MALBAIE

The construction under contract of an extension to the wharf, which was commenced last year, was completed. It is a cribwork structure, 120 feet long, 24 feet wide at the inner end, and 34 feet wide at the outer end, resting on a pile foundation. Some 1,036 feet b.m. of 3-inch deals were renewed in the wharf by day labour.

## STE. FAMILLE

The shore end of the wharf, for a length of 268 feet, was demolished and reconstructed in open-faced cribwork, and covered with a macadam surface. Coping, railing, fenders, mooring posts and ladders were placed, and the macadam surface on the rest of the wharf was repaired. The work was done by contract.

## ST. FÉLICIEN

The upstream part of the wharf from high water level up was reconstructed, and the whole wharf raised two feet. The downstream side of the wharf was repaired.

## STE. FÉLICITÉ

The break in the outer end of the wharf, 39 feet of which had been destroyed by a storm, was closed. A double vertical sheathing of 1-inch round timber was placed inside and outside the last outer row of cross-ties which were still in good condition and in position. Timber pieces were bolted together through the cross-ties, 95 lineal feet of stringers, 2,500 feet b.m. of planking, and 178 lineal feet of 12- by 12-inch face timbers were renewed.

## ST. FRANÇOIS NORD, I.O.

A wire fence, stretched on 8-foot posts, spaced 6 feet apart, and provided with eight gates, each 12 feet wide, was built on both sides of the road leading to the wharf, a total length of 5,400 feet.

## ST. FRANÇOIS SUD, I.O.

The work done consisted in renewing seventeen rock elm fenders; 15,000 feet b.m. of 3-inch deals in the flooring and sheathing; 5,000 feet b.m. of floor stringers; and the framework of the hoisting apparatus. The fence along the right of way, as well as the road, was repaired.

## ST. GEORGES DE MALBAIE

A crib, 50 feet long, 24 feet wide and 13 feet high, was constructed, but not put in position on account of the lateness of the season.

## ST. GREGOIRE DE MONTMORENCY

Under contract, 198 lineal feet of the revetment wall eastwards, and 306 feet westwards, was reconstructed, and a slip built at the east end of the wall to reach the beach. The wall is now 1,928 feet long with an average height of 10 feet, 4 feet wide at the base and 1 foot wide at the top.

## ST. HUBERT

The work of levelling, seeding, harrowing, mowing and draining the landing field was continued. Shelters were made for transformers, the pumping station and drainage system were improved, and the ground levelled within a radius of 1,000 feet around the mooring tower. Permanent roadways, runways, and taxiways were constructed. The installation of the water supply system and the heating of the pumping station were completed. A fence was erected around the airport property, a garage constructed, and a radio station built. Hangar No. 3 was constructed and the necessary steam connections made with hangar No. 2. The control and administration building was built, a heating system installed and steam connections made with hangar No. 3. The telephone and electric lines within a radius of 2,100 feet from the mooring tower were laid under ground, and a complete system of electric lighting was installed. An aqua fuel system to bring the gasoline to the top of the mooring tower was installed. The work of installing a passenger elevator commenced last year was completed, and a building constructed at the base of the tower. Work was continued on the installation of winches and of a remote control at the top of the tower, and the heating system and pumping equipment were put in the tower. The electrical installation inside and outside the tower, including

fixtures, was also installed, and a jib crane and landing platform placed. The installation of a central heating system in hangar No. 2 was commenced, an air compressor installed, and various repairs and electrical improvements were carried out. The hydrogen main was laid from the hydrogen generating plant to the mooring tower, concrete foundations were constructed for the gas holder, a building to house the gas plant was erected, a gas holder and steel water tank were built, and a silicol hydrogen generating plant was constructed. Houses were built for the airport manager and customs officer.

#### ST. IGNACE DE LOYOLA

About two-thirds of the stone approach to the wharf, which has a length of 187 feet and a top width of 12 feet, was rebuilt in concrete, and repairs were made to the concrete flooring of the headblock.

#### ST. IRÉNÉE

A contract was awarded for the reconstruction of a portion of the wharf. The approach, for a length of 345 feet, was demolished, piles were driven where necessary to make a solid foundation, and concrete gravity walls erected on both sides and connected by concrete cross-walls every 10 feet. The space between the walls were stone-filled and finished with a macadam surface.

#### ST. JEAN PORT JOLI

The repairs made to the wharf consisted in renewing 3,000 feet b.m. of floor stringers, 10,600 feet b.m. of 3-inch sheathing, 2,000 feet b.m. of 8- by 8-inch railing, and 2,700 feet b.m. of 8- by 8-inch fenders. The head of the fenders, the railing and mooring posts were painted.

#### ST. JUSTE DU LAC

The outer 16-foot length of the wharf was rebuilt for a height of 4 feet and the slip partly reconstructed. A cribwork headblock, which forms an "L" at the outer end, 30 feet long by 16 feet wide, with an average height of 20 feet, was constructed as an extension to the wharf. This addition was decked with 3-inch deals, and a railing, fenders and mooring posts were placed.

#### ST. LAURENT, I.O.

A concrete wall, 150 feet 6 inches long, was built under contract on the west side of the wharf approach, and involved demolishing railing and coping, and constructing the wall including stone backfilling, macadamizing surface, and placing fenders, walings and ladders. Under day labour minor repairs were made to the slip, 1,018 feet b.m. of flooring renewed, and a new slip, 4 by 12 feet, built.

#### ST. LIGUORI

About 9 inches of old concrete around the icebreaker, and most of the nose, was removed and replaced by new reinforced concrete. The nose was protected by a steel plate,  $\frac{5}{16}$  of an inch thick by 8 feet wide and 10 feet long.

#### STE. LUCE

The superstructure of the wharf was rebuilt upon a length of 75 feet and a width of 25 feet. Two courses of ties, fifteen vertical posts, all the stringers and 3-inch planking and cap pieces were renewed. The sheathing on the wharf, for a length of 50 feet, and the approach to the shore end portion, for

a length of 60 feet, were also renewed. The cap pieces, mooring posts and tops of the sheathing and fenders, for the whole length of the wharf, were given two coats of paint.

#### ST. MARC

The old pile wharf was replaced by an open-faced crib headblock, 60 feet long, 20 feet wide, and  $8\frac{1}{2}$  feet above L.W.L. The face was well sheathed, capped with a coping piece, 6 by 10 inches, and floored with 3-inch plank. A slip,  $10\frac{1}{2}$  feet wide, was built in the structure.

#### ST. MICHEL DE BELLECHASSE

The stairway on the east side and the railing on the west side of the wharf were repaired, and twenty-four fenders on the west side and 300 lineal feet of 12- by 12-inch railing on the east side renewed. The headblock and a section of the approach, 30 feet wide by 300 feet long, were paved in concrete.

#### ST. OURS

A 6-inch layer of concrete flooring was laid for a width of 30 feet on the whole length of the wharf. The approach was gravelled, and minor repairs were made to the freight shed.

#### ST. PAUL (ILE AUX NOIX)

An open-faced crib, 65 feet long by 20 feet wide, was built and filled with stone. The approach was partly filled with stone, and minor repairs were made to the road from the right of way.

#### ST. PLACIDE

The wharf was reconstructed in concrete. The crib structure was removed and replaced by a concrete wall,  $10\frac{1}{2}$  feet high, 5 feet thick at the base, and 12 inches thick at the top. The work has a frontage of 85.4 feet on the downstream side and 104.3 feet on the upstream side. The front part of the wharf was covered with a concrete floor for a width of 20.6 feet, and the downstream side for a width of 15.7 feet. The work was done by contract. The stone approach of the wharf was repaired by day labour.

#### ST. ROCH DES AULNAIES

A section of the wooden flooring of the wharf, 20 feet wide by 115 feet long, was torn up and the area filled in with 35 toises of ballast stone and surfaced with a 6-inch layer of concrete. The remainder of the wooden floor and the freight shed were repaired.

#### ST. SIMÉON

Repairs were made to the floor stringers and flooring of the wharf, and to the slip. The freight shed was painted and the macadam surface on the approach, for a length of 175 feet, was repaired. The slip, hoisting apparatus, fenders, and some sheathing were renewed.

#### ST. SIMÉON DE BONAVENTURE

*Protection Work.*—The work done consisted in demolishing the partly destroyed pilework protection and rebuilding it in open-faced round timber stone-filled cribwork, upon 250 feet in length, by 10 feet in width, and 7 feet in height. The protection work at the mouth of the Little Bonaventure river

was also repaired, 400 feet in length being partly rebuilt, broken timbers replaced and new ballast put in. New ballast was also placed in 335 additional feet of the structure.

*Breakwater.*—At Henry's Beach an open-faced round timber stone-filled extension, 50 feet in length, by 14 feet in width, and 14 feet in height, was built to the breakwater. The head of the older portion of the breakwater was sheathed upon a length of 113 feet and a height of 14 feet.

*Wharf.*—The 50-foot cribwork extension to the wharf was completed. Sheathing, planking, stringers and cap pieces were laid on the structure which was also completely filled with ballast.

#### ST. SIMON

The isolated pier built in 1928 was extended to the shore by building an open-faced round timber structure, covered and sheathed with 3-inch deals. It is 180.7 feet long, by 19.9 feet wide, with a cribwork approach 12.2 feet long by 20 feet wide.

#### ST. SULPICE

A reinforced concrete icebreaker, 33 by 33 feet at the base,  $14\frac{1}{2}$  by 33 feet at the top, and 22 feet high, was built at the upstream end of the wharf.

#### ST. ZOTIQUE

As the wharf approach was badly damaged by ice during last spring, two piers had to be extensively repaired and two others completely rebuilt. The flooring was also repaired on the whole length of the approach, and some floor stringers were renewed. The three ice piers situated in Lake St. Francis, some 400 feet upstream from the wharf, were raised 18 inches to more effectively check the movement of ice.

#### SACRÉ-COEUR

A cribwork structure was built to link the isolated pier with the shore. It has a length of 126.8 feet by a width of 20 feet with an approach in stone and gravel, 33.5 feet long by 20 feet wide.

#### SHIGAWAKE

The work done during the year consisted in renewing the sheathing of the wharf upon 120 feet in length by its height, also renewing the flooring upon 140 feet in length from the slip to the outer end of the wharf, replacing twelve fenders and placing 140 cubic yards of stone ballast. The descent to the beach at Chapados by-road was levelled and gravelled upon a length of 100 feet by a width of 20 feet, and a small protection cribwork pier built at the foot of the descent. A concrete protection work to protect a descent to Shigawake Beach was constructed, and a concrete wall, 190 feet in length, built and secured to the rock.

#### SOREL

*New Deep Water Wharf.*—Work on the contract for the construction in concrete of a new wharf was continued. A large number of the piles and slabs, which had been damaged or broken by ice pressure, were removed along the east and west faces of the wharf. As it was found impossible to remove the broken piles on the outer face, the front of the dock was therefore built 5 feet outside of its original alignment. New piles and slabs were cast and driven to replace those broken, and the whole superstructure was completed. Three slips were constructed on the west face of the wharf for the use of the Canada

Steamship Lines, and the sheathing at both ends of the wharf was placed. The filling of the pier was started, about 140,000 cubic yards of the total quantity of 200,000 cubic yards being placed.

*High Level Wharf.*—Under contract 3,260 concrete piles were driven for the foundation of the 2,000,000-bushel capacity grain elevator, and a reinforced concrete dock was partly constructed along the east face of the proposed elevator and the south and east faces of the high level wharf. The new work faces Lanctot Basin and will be 1,144 feet long. During the year piles were driven for about 400 lineal feet of the elevator dock, and the superstructure was built on a length of 246 feet.

*Pontbriand Wharf.*—A new concrete flooring, 8 inches thick by 40 feet wide, was laid on the whole length of the wharf, and the remainder of the wharf, having a width of 80 feet, was covered with gravel.

*Harbour Improvements Generally.*—As part of the 400-foot concrete roadway from the foot of Roi street to the high level wharf had to be demolished in connection with the construction of the grain elevator, a new roadway was opened along the Richelieu river by extending Reine street. This roadway, which is 25 feet wide and some 500 feet long, was surfaced with gravel. On the Richelieu river section of the dock five landing slips were filled, and the construction of a concrete slab, 24 feet wide, was started to provide a new roadway on the dock proper, the length constructed this year being 384 feet. To accommodate navigation on the St. Lawrence river face of this "L"-shaped dock two new landing slips were built. A new 3-inch flooring was laid on the part of the Canada Steamship Lines wharf adjoining the high level wharf and the old wharf of the Canada Steamship Lines, south of St. Jacques street, was filled and levelled. As the water pipe which supplies the high level wharf was destroyed when driving the piles for the elevator foundation, it was replaced by a new 4-inch cast-iron pipe. The Canadian National Railways built a siding along the Richelieu river from the station down to the wharf. The laying of this track altered the grades in a few streets and the following remedial works had to be made: a movable gangway, furnished with a hoisting frame to accommodate the ferry, was built; the freight shed of the Sorel-Berthier ferry was removed; a combined shed and garage, which was in the way of the track, was cut in two and repaired; and two other buildings were demolished. Some filling was also made to provide a level crossing over the siding.

#### STRATFORD CENTRE

The stone riprap on the southwest side of the approach was repaired, and a 90-foot length of the approach reconstructed in open-faced cribwork and surfaced.

#### TADOUSSAC

*Anse Tadoussac.*—On the front face of the headblock and pier six rock elm fenders and 468 feet b.m. of rock elm walings were renewed. On the north-east side of the approach 15,000 feet b.m. of 10- by 10-inch face timbers and cross-ties were also renewed, and 1,100 cubic yards of the approach was excavated and filled in with 812 cubic yards of stone surfaced with a 6-inch concrete slab. The shed was shingled and painted.

*Anse à l'Eau.*—The repairs made to the wharf consisted in renewing 3,500 feet b.m. of 3-inch flooring and 2,300 feet b.m. of oak fenders and walings. The windows of the shed were glazed, and minor repairs made to the gravel surface of the approach.

## THURSO

The landing head of the wharf was rebuilt, after demolishing the old cribwork and replacing it with new material. A small icebreaker was constructed at the rear of the freight shed, and the low level freight shed rebuilt.

## TROIS PISTOLES

The concrete wall south of the inner leg of the inner wharf was completed. On the inner wharf 1,816 feet of 10- by 10-inch face timbers, 2,000 feet b.m. of 8- by 8-inch railing, and 6,000 feet b.m. of 3-inch flooring were renewed. On the outer wharf, 3,000 feet b.m. of 10- by 12-inch floor stringers, 12,000 feet b.m. of 3-inch flooring, 3,000 feet b.m. of 10- by 10-inch face timbers, and 4,000 feet b.m. of 4-inch hardwood sheathing at the headblock were also renewed.

## VALLEYFIELD

A macadam roadway, 22 feet wide, was built from the street to the wharf, a distance of 415 feet, and a concrete wall constructed along the side of the road.

## VARENNES

The construction under contract of a concrete protection wall in front of the village, which was commenced last year, was completed. The wall extends from the wharf upstream along the shore for a length of 465 feet. It is 21 feet high, 7 feet wide at the base, 16 inches wide at the top, and rests on a pile foundation, the piles in each row being driven at 5-foot centres. The concrete flooring of the wharf was repaired by day labour, and repairs were made to the gravel approach. Two reinforced concrete icebreakers similar to the two built last year were constructed on the shore of the St. Lawrence river in front of the village. These icebreakers are 22 feet 3 inches square at the base, 8 feet square at the top, and 18 feet high. The two sloping faces were given a concrete covering, 24 inches thick, with a slope of 1 in 1. The other faces and tops of the piers were similarly covered.

## VERCHÈRES

The construction of a breakwater, 40 feet downstream from the wharf, which was commenced last year, was completed. It is 216 feet long, made of two rows of piles driven at 6-foot centres and filled with stone. The piles in each row are driven at 2-foot centres. The work was done by contract. During the last spring ice shove, and the high water of 1929, the wharf approach was badly damaged, a section of the concrete wall along the downstream side was undermined and fell down, and the roadway leading to the approach badly washed out. The necessary repairs were made, the concrete wall being rebuilt, the flooring repaired where necessary and considerable stone filling made. This work was done by day labour.

## VERDUN

The wharf headblock, 80 feet long by 40 feet wide, was rebuilt in concrete. The cribwork was removed down to L.W.L. along the upstream, downstream and front faces, and replaced by a concrete wall, 4 feet thick at the base, 2 feet thick at the top, and 5 feet high. Repairs were also made to the concrete flooring of the wharf.

## VILLE MARIE

Extensive repairs were made to the wharf involving general repairs to the pilework landing head and approach, splicing 210 piles and renewing pile caps, stringers, braces, wheelguard and fenders. The superstructure on a section of the landing head, 40 by 145 feet, was rebuilt.

## YAMACHICHE

A wooden landing platform, 100 feet long by 20 feet wide, resting on three rows of piles, 30 feet long, spaced 10 feet apart, transversely, was built in front of the turning basin. The front and rear rows of piles are spaced 5 feet apart, longitudinally, and the middle row, 10 feet apart. The flooring is of 3-inch plank.

## GENERALLY

Repairs were made to the following works:—

Anse du Moulin, breakwater; Boucherville, retaining wall; Bryant's Landing, roadway; Cap à l'Aigle, wharf; Cap de la Madeleine, wharf; Cape Cove, wharf; Carleton, wharf; Caughnawaga, wharf; Chandler, wharf; Choisy, wharf; Desjardins, wharf; Fort William, wharf; Georgeville, approach; Hull, wharf; Iberville, wharf; Magog, wharf approach; Maria, wharf; Marsboro (Victoria Bay), wharf; Montebello, wharf; Notre Dame de l'Isle Verte, wharves; Notre Dame du Portage, wharf; Perkins Landing, wharf; Piopolis, wharf; Pointe Basse, wharf; Rigaud, wharf; Rivière au Renard, wharf; Ste. Adelaide de Pabos, wharf; Ste. Anne de Beaupré, wharf; Ste. Anne de Bellevue, wharf; St. Fabien, pier; St. Godfroy, wharf; St. Jean (I.O.), wharf; St. Mathias, wharf approach; St. Pétronille (I.O.), wharf; St. Roch de Richelieu, protection work; Sandy Beach, wharf; Seven Islands, wharf; Squatteck, wharf; Terrebonne, protection wall.

The following works were commenced but were unfinished at the end of the year:—

Anse au Griffon, breakwater construction; Anse à Valteau, wharf extension; Bradore Bay, wharf construction; Grande Anse, wharf construction; Les Eboulements, wharf repairs; Manicouagan, wharf construction; Paspébiac East, breakwater extension; Petit Cap, breakwater construction; Pointe aux Outards, wharf construction; Port Daniel West, breakwater construction; River St. John, protection wall construction; Rivière au Renard, wharf extension; Rivière au Tonnerre, wharf construction; Roberval, wharf repairs and improvements.

## ONTARIO

## ALLANDALE

A portion of the stone approach of the wharf, 270 feet long and 16 feet wide, which had sunk, was filled in with stone and levelled with gravel and cinders.

## BAYFIELD

The south pier was rebuilt for a length of 100 feet, and face timbers were replaced. The north pier, for a length of 100 feet, was reinforced by a new concrete wall and general repairs were made to a further length of 100 feet.

## BEAVERTON

The contract for the reconstruction in concrete of the north revetment wall, 156 feet 9 inches long, commenced last year, was completed. During the year the mass concrete work was constructed, and the walings, niggerheads and iron railing were placed over the full length.

## BELLE RIVER

To prevent erosion of the sheet-pile wall, two lengths of additional wall, 71 and 19 feet long, respectively, were built of round piling, 20 feet long, placed at 7-foot centres. The work was sheathed with 4- by 12-inch by 16-foot sheathing and fitted with two 6- by 8-inch wales.

## BROCKVILLE

The 7-foot fence to the north of Block House Island was repaired for a length of 495 feet, and 341 lineal feet of sidewalk extending along the east side of the island renewed. The decking, floor stringers, cross-ties and posts of the stem of the breakwater, 300 feet long by 80 feet wide, were removed and the superstructure reconstructed from low water level for a width of 16 feet, around the sides and ends, with inside railing and wheel-guards. On the north-west side the planking, for a width of 7 feet by a length of 157 feet, was replaced, and the earth approach graded.

## BURLINGTON CHANNEL

*Bridge Substructures.*—A contract was awarded for the construction of new substructures for the C.N.R. swing bridge over Burlington channel, and a substructure and road approach for an additional leaf to the highway bascule bridge, together with a section of the new north pier, 60 feet long. Excavation work for the pivot pier of the C.N.R. bridge and the rest pier of the highway bridge was proceeded with, and is approximately one-half finished. Steel cofferdams were driven in position for the pivot and rest piers, and on the north side of the protection pier, extending easterly for a length of 70 feet from the rest pier cofferdam. The steel work forming part of the protection pier, and the steel piling on its westerly end, for a length of 65 feet, were driven in position.

*New North Pier.*—The construction, under contract, of a new north pier, covering a total length of 2,700 feet, was commenced. The substructure is of pilework bents, with tongued and grooved sheet-pile face walls and varying in width from 14 to 40 feet, while the superstructure will be of block and mass concrete. The substructure of the headblock at the lake end, which is 100 by 40 feet, is almost completed. West of the headblock, for a length of 500 feet, pile-bents were driven in position and 100 feet of grillage placed in the work. At the Burlington Bay end, the headblock, for a length of 50 feet and a width of 40 feet, is about completed, the pile-bents being driven in position, together with the face piling and grillage.

*Old North Pier.*—The sheet piling of the old north pier, which was damaged by a severe storm in October, 1929, was tied back to new anchor piles with steel cable. The work was commenced at the east end of the pier and extended westerly for 500 feet.

*Lift Bridge.*—As the lubricating system failed to function and the lift bridge could not be operated, urgent repairs were required. The lubricating tracts were cleared for the proper lubrication of the bearings, new link pins and bushings supplied, and defects in the trunnion bearings remedied. It being necessary to change from direct to alternating electric current for the operation of the lift bridge, a power house, 20 by 20 feet, was constructed, and a motor generating set and control equipment were installed.

## CHATHAM

A portion of the sheet-pile wall, 90 feet long, above the footbridge at McGregor's Creek, was repaired by cutting off the tops of the sheet piles above water and replacing them with new timber. This timber, together with the tops of the piles renewed during the past four or five years, was coated with carbolineum.

## COBOURG

The contract for the reconstruction of a damaged section of the southwest breakwater, commenced last year, was completed. The reconstructed work is

110 feet long and 30 feet 8 inches wide, with a maximum depth of 29 feet. The substructure is of stone-filled cribwork. Owing to the very high stage of water in Lake Ontario, and the fact that it would be inadvisable to place the mass concrete on the concrete footing blocks, which were some 3 feet under water, a change was made in the contract eliminating the mass concrete in the superstructure and substituting rubble mound construction.

#### GODERICH

*South Pier.*—The contract for the reconstruction in concrete of the superstructure of the south pier, for a length of 300 feet, which was commenced last year, was completed. In this work the timber substructure below water level was utilized, and strengthened by round timber piles driven at 5-foot intervals along both faces, separated from the old timbers by filler wales, and tied together with 1½-inch steel tie-rods. Upon this substructure a permanent superstructure was placed consisting of concrete footing blocks, 3½ feet wide by 10 feet long, mass concrete side walls, cross-walls, and reinforced concrete deck slab.

*North Pier.*—The reconstruction, under contract, of the north pier in concrete, for a length of 500 feet, was completed, the work being carried out similarly to that of the south pier.

*Mooring Wharf.*—The contract, commenced last year, for the extension at each end of the mooring wharf across the west side of the inner harbour, between the inner end of the north pier and the Commercial wharf, was completed. The new work comprises a timber crib extension to the north of the old mooring wharf, 190 feet long, with 8 feet of sheet piling at the northerly end, and a cribwork extension at the southerly end, 250 feet long. On the mooring cribs six bollards were placed at 30-foot intervals, five on the shore to the west and one to the northeast. The mooring wharf, as now extended, completely fills the gap between the westerly end of the north pier and the Commercial wharf, with the exception of a 33-foot gap immediately north of the north pier, which was left to permit small fishing boats to obtain shelter in the rear of this structure. The completed work gives a continuous length of mooring wharf for 640 feet on the west side of the harbour.

*Generally.*—Under day labour repairs were made to timber piers, canal gates and the life chain. The ramp was built up to the mooring wharf and four mooring bollards were placed at the inner end of the harbour.

#### GRAND BEND

The outer end of the north pier and the side walls, for a distance of about 400 feet toward the shore, were rebuilt, and 155 cubic yards of ballast placed in the pier. A concrete roadway and sheet pile wall on the north side of the harbour were repaired. The work of rebuilding the south pier was started, but owing to high water, could not be finished. The superstructure was removed and additional bearing piles were driven to hold the face timbers. Piles were also driven between this pier and the south shore, upon which it is proposed to erect a reinforced concrete retaining wall.

#### GRAVENHURST

The wharf approach roadway, 500 feet long by 18 feet wide, was widened and surfaced. A floating wharf, 66 feet long by 8 feet wide, was constructed, and two sections of stone-filled cribwork wall, one 80 feet long on the west side of the road approach, and the other 56 feet long on the east side, were built. A concrete walk, 600 feet long by 4 feet wide, leading to the wharf, was also constructed.

## HAMILTON

Repairs were made under contract to the revetment wall for a length of 1,200 feet on the north face. On the Wellington street side of the wall 1,100 lineal feet of waling was renewed, and 466 feet on the north side, extending westerly from the Wellington street end. Along the revetment wall seven clusters of four piles each were placed.

## HONEY HARBOUR

Owing to the high stage of water in Georgian bay the wharf headblock, 80 by 20 feet, and a portion of the stone approach, were raised 2 feet 3 inches.

## KENORA

The decking and guardrail of the Matheson street wharf were repaired. On the Main street wharf waling was placed, and sheeting and 75 per cent of the decking were renewed. On the Subway wharf the decking was repaired.

## KINCARDINE

The reconstruction under contract of two sections of the north pier, 100 feet and 200 feet long, respectively, which was commenced last year, was continued. At the end of the year the 100-foot section of piling was completed, and thirty-three piles were driven in the work of close-spaced round piling. On the outer 200-foot section practically all the excavation was done, the piles driven, 60 feet of superstructure built, a further 60 feet finished except for decking, and blocks placed for 50 feet ready for the mass concrete. Another contract was awarded for the reconstruction of a length of 200 feet of the superstructure of the north pier. About 20 per cent of the excavation was done and 42 per cent of the piles driven. Under day labour mooring piles were driven on the north side of the harbour, and repairs made to the stringers and decking near the bridge. A shore protection crib was placed across the gap between the west pier and the Lang property, and sand bags and stone filling were put in to protect the foundation of the house.

## KINGSTON

*La Salle Causeway.*—Repairs were made to the first-class roadway, and the foundation for the five bollards and two niggerheads was renewed.

*R.M.C. Grounds.*—On the concrete coaling pier one-half of the gravel surface, which had been washed away by the waves, was replaced with stone and tarvia. The Commandant's boathouse, located south of the causeway, was demolished and the material used to rebuild it in Navy bay. The wooden sidewalks, part of the bathing houses' platform, the main boathouse platform, and the hand-railing were repaired.

*Dry Dock.*—To accommodate larger vessels the dock chamber was lengthened 93 feet. This construction performed under contract involved the demolition of 533 cubic yards of masonry in the side walls and end chamber, starting from the angle of the splay walls. It was also necessary to remove 1,146 cubic yards of earth and 4,058 cubic yards of solid rock, and some of this material was deposited immediately west of the dock to form a breakwater. The masonry stone, after removal, was found to be unfit for use in the extension work, and was, therefore, dumped into the breakwater. The floor, side and end walls were built of concrete, 2,256 cubic yards being placed in the work. Seven sets of bilge blocks and fifteen keel blocks were added to the extension. The dock has now a berthing length of 373 feet and the width of the chamber at the floor level is 47 feet. Steps were built on the east side of the dock, extra lengths of bilge chains supplied, and drainage tiles placed under the concrete floor and back of the side and end walls, to carry off water seeping through rock crevices.

## KINGSVILLE

The superstructure of a section of the east pier, 104.6 feet long, was rebuilt in concrete and minor repairs were made to the warehouse.

## LEAMINGTON

Near the shore 68 lineal feet of the superstructure of the wharf was rebuilt in concrete. Minor repairs were made to the decking on the "L" and approach.

## LION'S HEAD

Sheet piling was placed on the inner end of the wharf opposite the warehouse and seven mooring posts were driven.

## L'ORIGNAL

The flooring of the wharf was patched, some 25,576 feet b.m. of 3-inch lumber being used. The stone and earth approach was graded and temporary repairs were made to the landing face of the low level landing. The low level landing flooring was loaded with stone to prevent it from raising during the high water period.

## MANITOWANING

A wharf having a landing platform, 60 feet wide by 200 feet long, was constructed on cedar piles, and stands in 8 to 20 feet of water. It is connected to the shore by a stone-filled and gravel-topped roadway, 80 feet long by 16 feet wide. The stringers, cap timbers and decking are of British Columbia cedar. The work was done by contract.

## MEAFORD

In the east revetment wall three detached sections were reconstructed as follows: one section extending southerly for a length of 20 feet 7 inches from the intersection of the revetment wall with the east breakwater; a second section in front of the old elevator wharf covering a length of 150 feet 3 inches; and a third section extending northeasterly from the east end of the road bridge covering a length of 130 feet. New face timbers, where required, averaging three courses, were securely bolted in place on the face walls back of the H piles, and the timber was levelled off at 1 foot below zero level. Mass concrete face walls were then constructed, 7 feet high and 18 inches thick, over the three sections. Two new timber walings, 10 by 10 inches, were securely bolted in position, one to the steel H piles and the other to the mass concrete work. The shore end of the breakwater was repaired, the damaged section, covering a length of 200 feet by a width of 20 feet, being filled with 798 cubic yards of rubble stone.

## MINAKI

The wharf was renewed throughout, as it had been considerably damaged during the summer of 1927-28 by the excessively high water in the Winnipeg river. The structure is 221 feet long by 16 feet wide with an "L" at the lake end, 54 feet long. Electric light standards were erected on the wharf.

## OAKVILLE

The superstructure of the south pier, for a length of 122 feet and a width of 12 feet, was reconstructed by renewing five courses of face timbers on both sides of the pier, together with two rows of cross-ties, three longitudinals and decking. A very severe storm in October wrecked the end crib at the south end of the north pier to such an extent that the lighthouse, erected on the adjoining

crib, was exposed to storm action. To protect the lighthouse it was necessary to remove the damaged crib and construct in its place a new one, 26 feet long, 20 feet wide, and 17 feet high, fully ballasted.

#### OTTAWA

The Union bridge was scraped free of rust and painted over its entire surface. The portion of the Laurier bridge, located above the Rideau canal and the driveway, was also painted. The three old underground flumes which were beneath the Hull causeway were filled with about 120 cubic yards of stone.

#### PELEE ISLAND

*North Wharf.*—The warehouse, 15 feet 4 inches by 70 feet 8 inches, located on the north wharf, was reconstructed. After the close of navigation, the face timbers across the outer end of the north pier, and for 12 feet on the west and 23 feet on the east side, were rebuilt. The decking, for a length of 50 feet from the outer end, was lifted and relaid, after replacing defective stringers and planking. The decking, for a length of 20 feet north of the warehouse, was also renewed, and one span on the approach redecked.

*West Wharf.*—On the west wharf sheet piling was driven on the south side, opposite the warehouse, and a break in the face wall, under the water, was repaired. The ballast stone which had run out of the crib was lifted by the departmental dredge and replaced inside the wharf. On the north side of the pier adjacent to the concrete portion 70 lineal feet of face wall was rebuilt. Minor repairs were made to the siding on the warehouse, and the southeast end of the roof was resingled. The road approach was repaired with broken stone to prevent further damage by the seas breaking over the face wall.

#### PENETANGUISHENE

The superstructure, including cap timbers, stringers and decking, of the 350-foot section of the wharf was reconstructed for a length of 223 feet 3 inches by a width of 20 feet, and raised 1 foot for the outer 98 feet.

#### PORT ARTHUR

*Rubble Mound Breakwater Extension, Main Harbour (North).*—The contract for an extension to the rubble mound breakwater, in the main harbour north, which was described in last year's report, was resumed. The placing of rubble mound core was continued during the year and 313,478 cubic yards were placed in the work. This work, for a length of 2,000 feet, was built up to water level. The first 200 feet, adjacent to the existing breakwater to the north, was completed above water level and covered with covering rock.

#### PORT BRUCE

*West Pier.*—Two sections of the superstructure of the west pier were rebuilt, one for a length of 50 feet near the shore line, part of which is 20 feet wide and part 12 feet wide, and the other for a length of 110 feet at a point near the inner end, part of which is 12 feet wide and part 10 feet wide. General repairs were made to the decking and stringers.

*East Pier.*—The superstructure of the east pier, for a length of 107 feet, was also rebuilt and sheet-piled. A concrete wing was built on the eastern end of the concrete wall to prevent the seas from running behind it.

#### PORT BURWELL

*West Pier.*—The front superstructure of the west pier was rebuilt for a length of 292 feet, a width of 14 feet and a height of 6 feet above low water

level. The inner harbour end, for a length of 80 feet, was also reconstructed, and 496 lineal feet of hardwood waling placed on the outer end of the sheet pile wall on the west side of the harbour. On the westerly side of the west pier 450 lineal feet of sand fence was erected to prevent the sand from blowing into the entrance channel. A small boat-house was built on the east side of the harbour and a boat and motor purchased. The work was done by day labour.

*Rubble Mound Breakwater.*—The work under contract, on the construction of rubble mound breakwater, which was commenced last year, was resumed, and the breakwater constructed to its full height for a distance of 1,550 feet, and the toe stone placed for the full length of the work. The mound is composed of quarry-run stone with a slope of  $1\frac{1}{2}$  to 1 on the lake face, and 1 to 1 on the harbour face, the facing being of 5- to 10-ton stone. The mound has a top width of 12 feet and a total height of  $26\frac{1}{2}$  feet.

#### PORT COLBORNE

The contract for the repairs to the east and west breakwaters, which was commenced last year, was continued. The work done this year was confined to the rebuilding of the damaged portions of the west breakwater. A total length of 838 feet from the water level up and a total length of 312 feet of the back or harbour portion were reconstructed. Talus blocks were also made on the lake side for a length of 175 feet. At the end of the season the west breakwater was completed, with the exception of a 67-foot length at the extreme westerly end.

#### PORT DOVER

*West Pier.*—New face timbers, fender wale and decking were placed where required, five fender cribs built, and a new timber foundation was placed under the lighthouse. The work was done by day labour.

*East Pier.*—The contract work for the reconstruction of the east pier, commenced last year, was resumed. The old east pier was removed, and the timber cribs required for the new structure were placed, together with the concrete superstructure. The tenth timber crib was damaged by a storm and had to be removed for repairs. The pier is now completed for a length of 900 feet with the exception of walings. The reconstructed pier will have a length of 1,000 feet and a width of 20 feet.

#### PORT ELGIN

The landing dock was repaired and consisted in renewing 180 feet of 8- by 10-inch waling, repairing decking and stringers, and constructing a 25-foot crib, with backfilling at the inner end of the dock to replace a short span which had become decayed.

#### PORT HOPE

A contract was awarded to repair three sections of the harbour, and during the year the following work was performed:

*Centre Pier.*—The superstructure face timbers, averaging three courses, were removed and tongued and grooved sheet piling, 24 feet long, was driven in place for a length of 165 feet at the south end of the pier and for 93 feet north from the southwest corner. A timber waling, 10 by 12 inches, was placed along the 258 feet of pilework.

*West Entrance Pier.*—The old damaged timber superstructure was removed for a length of 270 feet from the south end of the pier, extending northerly, with a width of 30 feet and a depth of 4 feet, and replaced by a new timber superstructure of the same dimensions.

*Southwest Breakwater.*—The old timber superstructure, for a length of 560 feet, was removed, and a rubble mound section built on the timber substructure, the width at the base being 30 feet and at the top 10 feet.

#### PORT MAITLAND

The contract awarded last year for repairs to the headblock and face timbers of the west pier, and the protection of a 50-foot section immediately inward from the headblock was proceeded with. Owing to severe storms during the winter of 1928-29 and the spring of 1929, the steel sheet piling, which had been driven by the contractors around the headblock, was destroyed on the south and west sides to such an extent that it was decided to close the contract and secure the headblock from further damage by other means. However, the work in connection with the 50-foot section was completed and involved the protection of the old structure by 16-inch deep arch web Lackawanna steel sheet piling, with tie rods and concrete side walls and deck. The filling of some holes on the east side of the pier was also carried out under this contract. Extending in a northeasterly direction from the inner end of the west pier a round timber sheet pile wall, 700 feet long by 30 feet wide, reinforced by brace piles and anchor rods, was constructed under another contract. A third contract was awarded for the reconstruction of a length of 472 feet of the innermost end of the west pier, a length of 54 feet at the lighthouse at the outer end, and the securing of the damaged headblock, by building a concrete side wall, surrounding the sheet piling on the west side and placing large rubble stone over and at the west of the headblock. During the year the securing of the headblock was completed except the placing of a small quantity of heavy stone on the west side. The work at the inner end of the pier was confined to driving steel sheet piling which was done for a length of 358 feet on both sides of the pier, and 25 feet at the inner end.

#### PORT STANLEY

The work done by day labour consisted in driving four 4-pile clusters at equal intervals along the west face of the east pier and two sets of mooring piles, one north and the other south of this pier. The piles are 40 feet long, and the clusters bound with steel cable. On the east side of the harbour eight 3-pile clusters, a 33-pile bulkhead and three 2-pile clusters were placed, as well as three 3-pile clusters and five additional piles to the original clusters at the end of the west pier. One-half of the cost of this work was paid by the Cleveland and Buffalo Transit Company. The decking, stringers and face timbers of the west pier immediately north of the elevator and the decking and stringers on the 200-foot outer section were repaired, and the superstructure renewed. Additional stone ballast was placed and bollards repaired. Shoal buoys were also constructed and placed. Under contract a sheet pile wall extension to the east pier, of 12-inch piling, strengthened by batter piles at 5-foot intervals and protected on the east side by three 5-pile clusters and one 10-pile cluster, was constructed. The wall is deflected 31 degrees east from the alignment of the east pier to facilitate the turning of large vessels. -

#### PRESCOTT

*Pile Foundation.*—The contract for the construction of timber revetments and pile foundation for the terminal grain elevator, which was commenced last year, was completed. About 1,814,450 lineal feet of round piling and 2,195,920 feet b.m. of sheet piling were driven in the work. Wales, filler blocks, anchor logs and 12-inch channel iron facing were also placed, and bolted and secured with anchor rods, bolts, and spikes.

*Highway Diversion and Grading Trackage.*—The expropriation of a portion of the public highway necessitated the construction of a new section further north, and to cover this work, as well as the trackage work to connect the elevator with the C.P.R. and C.N.R. main lines, a contract was let. The usual work of excavation and fill was done, an overhead bridge constructed over the highway, tile and concrete drainage pipes and culverts were placed, the grading for tracks completed and the concrete surface put on the highway.

*Superstructure.*—A contract was awarded for the construction of the superstructure of the elevator and is rapidly progressing. At the end of the year approximately 20 per cent of the work was completed including nearly all the concrete mat on piles, 80 per cent of the column bases and 60 per cent of the floor slabs and columns. Some of the tanks were started and about 60 per cent of the dock work performed.

#### PROVIDENCE BAY

To facilitate the handling of automobiles, etc., to and from boats, a trapezoidal-shaped structure was built contiguous to the wharf. It is 96 feet long on the wharf side and 40 feet long on the outer side, centred opposite the middle of the inner side and  $23\frac{1}{2}$  feet distant. The work is of wooden pilework decked with plank on a level with the existing wharf. Round close piling encloses the exposed sides and is secured to the wharf by anchor rods. The piling extends upward 5 feet above the deck, making a protective parapet. The interior of the structure was filled with rubble stone.

#### RONDEAU

Under contract the superstructure, for a length of 202 feet, at the inner end of the east pier, was removed, a number of cross-tie timbers were placed, forty-one footing blocks moulded, round bearing piles and sheet piling driven, and the concrete superstructure rebuilt. On the east side of the east pier, for a length of 99 feet, sheet piling was driven to protect the pier from further damage from settlement. On the west pier seven spring piles were framed and driven. The work done by day labour consisted in building a shore protection comprised of one timber crib, 50 feet long, and two concrete cribs, 150 and 160 feet long, respectively, resting on a timber grillage with fascines.

#### SARNIA

In the work of extending the harbour accommodation, nine 8-pile clusters and eight mooring piles along the south side of the elevator slip, and the north-easterly 8-pile cluster in the winter storage harbour were pulled. Under contract the fender and mooring piles along the east side of the winter storage basin were also taken out. At the south of the elevator slip sixteen 12-pile fender clusters were constructed and placed, and twenty to the east of the winter storage basin, together with one 40-pile cluster. South of the elevator slip fifteen single mooring piles, faced with galvanized iron, were also placed, and sixteen east of the winter storage basin.

#### SAUGEEN RIVER

Under day labour the landing piers on the south side of the harbour were raised from 12 to 19 inches, on a length of 235 feet and a width of 16 feet. A contract was awarded for the construction of a sheet-pile wall, 125 feet long above the landing piers, and a cribwork block below, 100 feet long by 16 feet wide, with a concrete superstructure. During the year the steel sheet piles and anchor piles for the revetment wall were driven and waling placed. The timber section of the crib was completed and the crib placed, but not fully ballasted.

## SOUTH LANCASTER

The wharf and freight shed, being in a very dilapidated condition, were demolished and the piles pulled out, except those required for a small landing head, 27 by 56 feet, which was built adjoining the outer end of the approach. The lumber salvaged from the freight shed was used to build a smaller one.

## TAYLOR'S BAY

A new block and span wharf of round timber cribwork was built. The main structure has a stone-filled approach of 30 feet, three 12- by 12-foot cribs, and a headblock, 16 by 16 feet, with intervening spans of 14 feet. An "L", having a 16- by 16-foot crib and a 14-foot span, was constructed at the outer end and the whole structure floored with 3-inch decking.

## THORAH ISLAND

The work done during the year under contract consisted in constructing two entrance piers, each 40 by 10 feet, and two shore cribs, of the same dimensions, with superstructures of 10- by 12-inch stringers, decked with 3-inch plank. The damaged face wall, at the southerly end of the harbour, was repaired and reset in position. The superstructure was raised 2 feet on the west, south and east face walls.

## TOBERMORY

Settlement having occurred at the outer end of the cribwork wharf, a 170-foot section was rebuilt under contract. The section was raised from 12 inches at the east end to 52 inches at the west end. Under day labour the 12- by 12-inch timbers and decking of the glance booms in Big Tub harbour were renewed, and the booms replaced in the water and secured.

## WAUBAUSHENE

A rubble mound breakwater, 400 feet long, was constructed of field stone. It is 8 feet wide on top with side slopes of 1 to 1. Minor repairs were also made to the wharf decking.

## WHEATLEY

Repairs were made to the wharf by renewing caps, stringers and decking on large areas of the approach trestle, and renewing face timbers, stringers and decking on the outer cribs.

## WHITBY

*West Pier.*—The reconstruction in concrete of 513 lineal feet of the west entrance pier on its east side, with a width of 10 feet and a depth of 6 feet, which was commenced under contract last year, was completed. The work done this year comprised the putting in position of bed timbers for the concrete blocks, placing the blocks, constructing mass concrete work, and also placing bollards.

*Breakwater.*—The breakwater west of the west entrance pier having been damaged by storms, the reconstruction of a length of 506 feet by a width of 16 feet and a depth of 6 feet 7 inches was commenced under contract. Work was stopped in November owing to weather conditions, one-half of the contract being then completed.

*Generally.*—To repair the damage done by scouring at the foot of Brock street, a section of small cribwork 28 by 8 feet, was constructed, filled with stone, and planked over. The work was done by day labour.

## WINDSOR

The work done consisted in driving and framing new clusters of fender piles, and renewing and repairing old defective clusters. The concrete floor in the warehouse was patched, the steel doors were repaired, and two cast iron mooring posts placed on the wharf.

## GENERALLY

Repairs were made to the following works:—

Barry's Bay, wharf; Blind River, wharf; Bracebridge, revetment wall; Bruce Mines, wharf; Cape Croker, wharf; Cockburn Island, wharf shed; Colpoys Bay, wharf; Craigie Lea, wharf and warehouse; Dyer's Bay, wharf; Fitzroy Harbour, wharf; Gargantua, wharf; Kagawong, wharf; Keewatin, wharf; Mattagami Landing, wharf; New Liskeard, wharf; North Bay, wharf; Paradis Bay, wharf; Parry Sound, wharf; Pembroke, wharf; Port Rowan, wharf; Port Sydney, wharf; Thessalon, east and west wharves; Treadwell, wharf; Two and Seven Mile Narrows, glance booms; Victoria Harbour, wharf.

## MANITOBA

## ASSINIBOINE RIVER

Some 7,685 feet of old dykes were renewed and repaired, and 6,930 lineal feet of new dyke was constructed to prevent flood damage to farm lands in the vicinity of Portage la Prairie, and between Portage la Prairie and Winnipeg. The average dimensions of the dykes were 2.5 feet high by 2.5 feet wide.

## DELTA

The bridge was widened by 4 feet to provide a sidewalk for pedestrians in order that they would not have to use the vehicular portion of the bridge.

## GULL HARBOUR

The wharf approach, for a length of 120 feet, was reconstructed of round cribwork, some five tiers of timber being replaced. Replacements were also made in the old cribs and stringers, and part of the covering was renewed.

## RIVERTON

The wharf along the north bank of the Icelandic river was extended for a length of 200 feet by a width of 20 feet, and is composed of pile-bents spaced 5 feet apart, each pile-bent being made up of four bearing piles with cap, stringers and covering.

## ROSEAU RIVER

The construction of approximately 13 miles of dyke and a control dam in the river, 2 miles from the international boundary, was resumed, and as completed, provides a floodway approximately 1,000 feet wide at its narrowest point between two dykes, having a general height of 6 feet. These dykes widen out at the south end to form a considerable basin for the reception of the flood water from the river. The east dyke extends approximately 5,000 feet east of the river where the public road was raised. At the river crossing a dam was placed in the line of the east dyke. This dam is 120 feet long, and has three piers and two sluice-ways controlled by stop logs. The type of work is of pile-work with bracing and waling and three sets of sheet piling, two of timber and one of steel. The piers are filled with stone. The dam is connected with the dykes by the extension of the main row of sheet piling well into the dyke. Both banks of the river, the dyke, and the excavated ditch are riprapped in the vicinity of the dam.

## ST. GEORGE

In order to provide landings on each side of the river two small wharves were constructed. The wharf on the west side is 250 feet long and has an earth and stone fill, 120 feet long, and pilework, 130 feet long by 15 feet wide. The wharf on the east side is 130 feet long with an earth-filled approach, 20 feet long, and a pilework structure, 110 feet long. Each wharf has pile-bents 10 feet apart, with three piles to the bent.

## SELKIRK

*Marine Railway.*—Near the end of the navigation season of 1929, when pulling out the ss. *Grand Rapids*, of the Manitoba Transport Company, the cradle left the track, putting the slip out of operation. The cradle was eventually pulled to the top of the track with the vessel, and the vessel side-tracked. Examination showed that the rollers and frames were practically demolished, and that the timber work of the railway was in a bad state of repair, the timbers being considerably decayed. Repairs were undertaken and practically completed.

*Wharf.*—The wharf was reconstructed for a length of 720 feet and a width of 20 feet. The work consists of pile bents spaced 6 feet apart, each bent having three piles with bracing on the outer piles. Waling and a facing of 4-inch plank were placed on the front of the wharf. The superstructure has 12- by 12-inch caps, 8- by 10-inch stringers, and a 4-inch covering.

## WANIPIGOW RIVER

To prevent leakage in the dam, the upper face, for a length of 100 feet, was sheathed with flatted poles and a brush and rock fill, 12 feet wide and 8 feet high, constructed.

## GENERALLY

Repairs were made to the following works:—

Gimli, protection work; Killarney, inlet dam.

## SASKATCHEWAN

## LUMSDEN

For the protection of the town from the floods of the Qu'Appelle river, dykes were constructed along the bank of the river from the C.N.R. right of way to the lower end of the town, a distance of about 6,500 feet. For the most part earthen dykes with a 6-foot top and  $1\frac{1}{2}$  to 1 slope were used. For 1,025 feet a timber breastwork, consisting of bearing piles and 4- by 8-inch tongued and grooved cedar, was built; while in the earthen dyke a similar core was placed for 726 feet. Work west of the C.N.R. right of way was constructed by the railway at their own expense. The contract for the work was let by the C.N.R. East of the railway 75 per cent of the cost was paid by this department and the balance by the town of Lumsden.

## MOOSE JAW

The construction of a seed cleaning plant was carried out under contract by this department for the Department of Agriculture. The building is a reinforced concrete structure, 116 feet long, by 62 feet wide for a height of 49 feet, and extending to a complete height of 168 feet, the upper portion being 62 by 49 feet.

## ALBERTA

## ALBERTA BEACH

Construction was started on an extension, 300 feet long, having ten 3-pile bents and three cribs, each 16 feet long and 10 feet wide, and a cribwork pier-head, 20 by 30 feet. The piles were driven and the cribs sunk and ballasted, but the bracing and superstructure were not completed. Piles were also purchased to replace the 400-foot approach.

## COLD LAKE

A wharf was constructed, and has a stone-filled cribwork approach, 120 feet long by 10 feet wide, and a pierhead, 60 feet long by 16 feet wide on top, with a batter of 1 to 1 on the sheathed outer face. The whole work is solidly filled with stone.

## FORT MCMURRAY

A pontoon, which had been lost when the three pontoon wharves were being pulled out of the river in the fall on account of the danger from ice flow, was replaced and the others repaired. The new pontoon is 14 by 16 feet, consisting of a double tier of float logs with stringers, covering, and guardrail, and a hinged approach, 24 feet long by 12 feet wide.

## BRITISH COLUMBIA

## ALICE ARM

The wharfhead, which is 100 by 50 feet, was repaired by renewing thirty-two fender piles, eleven concrete footings, and constructing twelve concrete footings. Minor repairs were made to the freight shed and derrick, and the float was secured.

## BEATON

The wharf was reconstructed under contract. The new work is a combined pile-bent and crib structure, 286 feet long by 32 feet wide, running on a uniform grade of 1 in 12, from elevation + 28 at the upper end to elevation + 4.2 above L.W.L. at the lower end. Owing to the rocky nature of the foreshore being unsuitable for pile driving, the inner 64 feet of the structure is supported by three cribs, 12 feet long by 32 feet wide, placed at 14-foot intervals. A freight shed, 16 by 20 feet, built on skids, was also provided.

## BELLA COOLA

The piling and superstructure of the wharf approach were renewed throughout. The approach is 590 by 14 feet, widened at the outer end. A 12-foot extension was made to the freight shed. The work was done by contract.

## BUCKLEY BAY

The concrete landing slip was raised for its full length and extended 14 feet by means of concrete retaining walls at either side, with the intervening space filled with boulders, gravel and sand, and topped with a 6-inch concrete slab. The new landing slip is 274 feet long by 10 feet 6 inches wide. Cedar log floats, 159 by 6 feet, and 40 by 12 feet, were secured in place by untreated piles on the north side of the slip, for the accommodation of passengers landing from the ferry and launches.

## CAMPBELL RIVER

Under contract a float, 70 by 10 feet, was built of cedar logs, 10- by 12-inch stringers, 3- by 10-inch joists, 4- by 4-inch guard, and covered with 2- by 8-inch decking. Creosoted piles from 41½ to 44½ feet long were used, reinforced by four brace piles, cross-bracing on the first three spans, and 6- by 8-inch braces for the entire length of the float. Access is given from the wharf approach by a short incline, 10 by 5 feet, to the end of which the old gangway is secured. To protect the float from the southeasterly gales a rectangular breakwater of creosoted piling, with arms, 53 and 56 feet long, respectively, was built. The landing steps formerly at the site of the new float were dismantled and re-erected at the north end of the wharf.

## CANOE

A floored and fendered pile-bent addition, 16 feet wide by 98 feet long, was built east of and alongside the wharf approach, and connecting with the "L" at the outer end of the structure. This addition provides sufficient space to enable vehicular traffic to turn on the wharf.

## COLUMBIA RIVER BELOW BURTON

The work involved the construction of two rock-weighted fascine mattresses, 30 feet wide by 98 feet long, and 30 feet wide by 40 feet long, respectively, alongside and on the downstream side of Cottonwood dam, to prevent erosion and undermining of the dam. The mattresses are 2 feet thick, of brush fascines, secured between 6-inch poles placed on the river bottom, the whole being weighted down with a 12-inch layer of rock.

## COMOX

At the front of the wharf four dolphins of creosoted piles were constructed under contract. New decking was laid on a portion of the wharfhead, and one of the slips decked over. The roof and walls of the freight shed, 20 by 40 feet, were sheathed with corrugated iron, and the damaged southeast corner of the wharfhead repaired. The wharf approach was redecked for its entire length of 1,002 feet by a width of 20 feet, and runways of 2-inch planks were laid along the approach for vehicle tracks. Repairs were made to the joists where necessary, and a new float, 18 by 40 feet, was built. This float is composed of cedar logs of 24-inch diameter, with 8- by 12-inch stringers, 3- by 8-inch joists, 4- by 4-inch guard, and decked with 2- by 8-inch plank. Creosoted mooring piles were used for this float.

## COMOX LAKE (PUNTLEDGE LAKE)

A floating approach, 135 feet 4 inches by 16 feet, was constructed and temporarily moored in place, as the pile-driver was not available to drive the necessary piling for permanent mooring.

## CRAWFORD BAY

The lower 160-foot length of the crib approach to the wharf was reconditioned by renewing defective logs in the lower part of the crib, and completely rebuilding the upper 3 feet to 4 feet of cribwork with new cedar face and tie logs.

## CROOKED, PACK AND PARSNIP RIVERS

As the most essential work on this waterway is at various riffles and shallows along the Crooked river, the improvements were confined to this waterway. The most critical points in this river system were improved by brushing, removal of boulders, building tow-paths, improving wing dams, raising height of cribbing,

closing overflow channels, and removing sweepers. Work was done at the following locations: Harrison and Scattery riffles; Long riffle; Cross rapids and Billy Martin; Cottonwood and 1st, 2nd, and 3rd riffles; and Horseshoe riffle.

#### DEEP COVE

An approach, 290 by 6 feet, on a 6 per cent grade, supported on creosoted piles, with a float at the outer end, 60 by 14 feet, with a connecting gangway, 4 by 32 feet, was constructed under contract.

#### DEGNEN'S BAY

A pile approach, 120 by 6 feet, and a float, 40 by 15 feet, with a connecting gangway, 34 by 4 feet, were constructed to replace the old structure which was beyond repair. Creosoted piling was used throughout.

#### DENMAN ISLAND

A new float, 12 to 18 feet wide by 56 feet long, of cedar log construction, fitted with guard braces and decking, and connected to the wharf by a 5- by 36-foot gangway, was built to replace the old float which was badly eaten by the teredo. At the south side of the concrete ramp four new guide piers and a boom were built close to the wharf. The piers extend to a height of 16 feet above L.W.L. The tops are 2 feet square, and the sides have a 1 to 2 slope except on the faces next to the ramp where they are vertical.

#### DIGBY ISLAND

A walk, 766 feet long by 8 feet wide, with handrails on each side, was built on the existing creosoted piling upon which new creosoted diagonal sway braces were placed. A breakwater of creosoted piles, 80 feet long, was constructed on the south side of the approach to protect the float from the southeasterly exposure. Subsequently an extension of 17 feet was made to the breakwater at the easterly end to further protect the float. A new float was also provided. It is 58 feet long by 16 feet wide and provided with vertical stanchions. The gangway was also repaired. The work was done by contract.

#### ELKIN'S POINT

A float, 20 by 75 feet, with a floating approach, 8 by 125 feet, abutting on a concrete pier, 6 by 12 feet, with a shore section, 8 by 42 feet, was built. In the float and approach thirty-four cedar logs were used, with three cross-ties, 10 by 18 inches, and fifteen intermediate cross-ties in the float, and nine 8- by 16-inch and fifty-six 3- by 12-inch cross-ties in the approach, the whole being suitably bolted. The float is held in place by two stiff legs fastened to the float with a stirrup iron and to the rock ashore with U bolts. A stiff leg anchored to a 4- by 4- by 3-foot concrete block was also used midway along the approach which was secured to a 6- by 12-foot concrete abutment at high water mark. A gangway, 6 by 26 feet, hinged to the top of the concrete pier, connected the floating approach to the shore section.

#### FORD'S COVE

A triangular-shaped extension, 40 feet long, was made under contract to the wharf landing face, thus giving a total length of 110 feet. The bearing, fender and brace piles are of creosoted fir caps, 12 by 14 inches, stringers, 8 by 13 inches, joists, 4 by 12 inches, chocks, 6 by 10 inches, and sub-cap on angle face, 12 by 14 inches.

## FRASER LAKE

The work done consisted in constructing two turnout platforms, each 16 feet wide by 29 feet long, at the pile-bent wharf. These platforms were placed at the outer end and in a central part of the wharf, and will also provide additional storage room for freight.

## FRASER RIVER

*Nicomen Island.*—The construction under contract of a bank protection on the south side of Nicomen island near McDonald's landing which was commenced last year was completed. During the year 1,300 lineal feet of bank was graded, 194,580 square feet covered with straw, 2,522 tons of rock was placed in the mound and 7,526 tons of rock as bank paving. Protection work on the upper portion of the river slope of the new dyke was made by planting willows to form a root network.

*Steveston, Dyke No. 3.*—Dyke No. 3 was extended for a distance of 200 feet south towards the river channel, two rows of round piling being driven and secured with two 10- by 12-inch wales throughout their length. The upstream row of piles was faced with three rows of 4- by 12-inch fir, spaced at 12-inch centres. The top of the dyke extension is 9 feet above Sandheads zero. Along the full length of the extension on the downstream side rock was placed for a depth of 2 feet and a width of 20 feet. This rock was flared out to a width of 50 feet around the outer end of the extension. A 7-pile dolphin was driven just beyond the end of the extension to safeguard navigation.

*Steveston, Lulu Island Bank Protection.*—To prevent erosion which threatened the dyke immediately to the north, the construction of a bank protection was commenced under contract, but the work was not quite completed at the end of the year.

*Steveston, North Jetty, Section 4.*—The work under contract of repairing a 2,000-foot length of the north jetty commenced in 1928 was completed. During the year 11,942 tons of 200-lb. rock was placed.

*Steveston, North Jetty, Section 5.*—The construction of section 5 of this jetty, referred to in last year's report, was completed. During the year 32,204 tons of 150-lb. rock and 97,278 tons of 500-lb. rock were placed. It was found as the work progressed that a very considerable scouring of the original ground surface had taken place along the line of the work since it was commenced, giving an average of about 10 feet more in depth than originally called for. It was accordingly decided to bring the top of the mound to L.W.L. only, instead of H.W.L. as originally planned, with an 8-foot top width instead of a 3-foot one as called for under contract. This reduced height of mound covers the whole length under contract, except for the first 300 feet west of section 4, or from Station 208-00 to 211-00, where the mound is slightly above L.W.L.

*Survey Platforms.*—At the mouth of the river on a line approximately north and south of the end of the Steveston jetty, four platforms were constructed for the Hydrographic Survey, Department of Marine. They are of pile and timber construction, three being 10 by 10 feet supported on nine fir piles, and one 16 by 16 feet supported on sixteen piles. The caps are 10 by 10 inches, joists 4 by 10 inches, and decking 2 by 12 inches. The piles are braced with 3- by 12-inch material. Repairs were made to two of the existing platforms.

## GIBSON'S LANDING

The superstructure of the wharf approach was renewed. The roadway has a width of 16 feet at the pierhead and a length of 275 feet; and the sidewalk is 4 feet wide by 250 feet long. A handrail was placed on both sides of the approach.

## GINOLS

A contract was awarded to reconstruct the wharf. The new work is a combined pile-bent and crib structure having a level approach, 28 feet long, 16 feet wide for 22 feet, and 32 feet wide for the remaining length, connected with an incline platform, 200 feet long by 32 feet wide, running on a uniform grade of 1 in 8.3 from elevation +24 feet at the level platform to elevation +4 feet above L.W.L. at the lower end. The rocky nature of the foreshore above L.W.L. being unsuited for driving piles, one 8- by 16-foot, and four 12- by 32-foot cribs were constructed at 14-foot intervals to carry the inner 112-foot length of the structure. A freight shed, 16 by 20 feet, built on skids was also provided.

## GLENANNAN

A pile and framed timber wharf, 32 feet wide by 52 feet long, was constructed, and has a quarried rock mound approach,  $144\frac{1}{2}$  feet long, with a crest, 12 feet wide, and side slopes of 1 in 1. The wharf is provided with a small incline ramp, 12 feet wide by 20.8 feet long, to serve for landings at low water stages.

## GOWER POINT

A new float, 36 by 48 feet, was built to replace the structure which had been badly eaten by the teredo and waterlogged. In the construction eleven cedar logs were used with end-ties, 10 by 14 inches, intermediate cross-ties, 4 by 14 inches, two stringers, 6 by 8 inches, and eleven stringers, 3 by 8 inches, with 2- by 12-inch decking.

## GRAY CREEK

The wharf was reconstructed under contract. It is a pile-bent structure consisting of a level approach, 16 feet wide by 39.5 feet long, connected with an incline platform, 234 feet long by 32 feet wide, which runs on a slope of 1 in 10.2 to a level section of triangular shape, having sides of 32, 37.7 and 50 feet, respectively.

## GRIEF POINT AND RAGGED ISLANDS

*Grief Point.*—The six wooden spar anchors near Grief Point, which had been destroyed by the teredo, were replaced with iron spar buoys. Each buoy is 24 feet long with a maximum width of  $21\frac{1}{2}$  inches tapered at each end, and shackled to a concrete anchor, 8 by 8 by 3 feet, with 40 feet of  $1\frac{1}{2}$ -inch chain.

*Ragged Islands.*—The boom stick protection work was replaced at strategic points along the shore with concrete piers. In all twenty-four of these abutments were built, containing a total of 800 cubic yards of mass concrete. The individual abutments varied considerably in size from 10 to 50 yards, depending largely on the shape of the bank. One U-shaped anchor bolt of 3-inch round iron, was set in the top of each pier. The top of each pier is 3 feet above H.W.L. and  $2\frac{1}{2}$  feet in width across the top. The sides and front slope on an average of 65 degrees from the horizontal.

## HOLBERG

The trail, 1,442 feet long, connecting the boat landing with the settlement, was cleared of obstructions and repaired. Repairs were made to the floating landing at the end of the trail, a new float, 40 by 20 feet, with two 4-pile dolphins of creosoted piles at its face and a new gangway, 34 feet by 3 feet 11 inches, being constructed.

## IRVINE'S LANDING (PENDER HARBOUR)

To improve shipping facilities the old float was replaced by a wharf. The pierhead is of irregular shape with 120 feet of landing face. The approach is 130 feet long by an average width of 16 feet. A section of the old float, 15

by 36 feet, was attached to the pier, and a new gangway, 6 by 40 feet, constructed. A warehouse, 20 by 30 feet, was built, a movable slipway, 10 by 36 feet, installed, and a landing platform, 6 by 12 feet, built at the end of the gangway. The piling and posts are creosoted, and the square and deck timber is of British Columbia fir. The work was done by contract.

#### JACKSON BAY

A concrete anchor was made, and wire rope for fastening the float supplied. Six sections of the floating approach were renewed, involving the use of twenty cedar logs and 7,752 feet of lumber.

#### JERICHO

*Air Station.*—A new slipway, 290 feet long and 20 feet wide, was built under contract. It is level for a length of 60 feet, and has a grade of 1 in 10 for the remaining length. The inner portion, 200 feet long, is of pile-bent construction. The balance or outer portion, which lies for the most part below L.W.L., and is of frame construction, was built ashore, towed into position between guide piles, and sunk by loading with rails so that the bents rested on the sand, the inner end being hinged to the outer end of the fixed portion. At the outer end of the old slipway, as the bottom was of almost pure mud, the short piles to be used in this portion would not hold, so it was decided to frame the last four bents of the fixed portion, float it into position, and hold it down by driving four 70-foot untreated fir piles with a penetration of from 60 to 65 feet, butt down. To stabilize the outer bent of the fixed portion two extra untreated fir piles, 65 feet long, were also driven. As a severe westerly storm loosened the westerly side of the slip at the framed portion, tearing it loose from the piles on that side and raising it about 12 inches, 10 tons of rails were placed on this portion to prevent further lifting, and some of the planking was repaired.

#### KILLINEY

The old wharfhead was demolished and replaced with a new inclined landing platform of pile-bent construction, 32 feet wide by 65 feet long, running on a grade from elevation +8 feet at the approach to elevation +4 feet at the outer end. A new freight shed, 16 by 26 feet, was constructed on a pile-bent platform of the same dimensions. The approach, 16 feet wide by 108 feet long, was repaired.

#### LANG BAY

An extension of creosoted piling driven at 10-foot centres was made to the wharf. The stringers are 8 by 10 inches, joists, 3 by 10 inches, caps, 10 by 12 inches, guard, 8 by 8 inches, and decking, 3 by 12 inches. The old slipway was planked over and the boat landing steps renewed. The freight shed was repaired, four posts were placed in the wharf approach, and four new mooring cleats fitted.

#### MINSTREL ISLAND

A float, 30 by 64 feet, was constructed and placed in position. It is comprised of twenty cedar logs with 14- by 16-inch end-ties, fastened with 1½-inch bolts. Four cross-ties, 12 inches square, were used where the float logs are joined, with intermediate cross-ties, 4 by 12 inches. The structure was decked with 2-inch plank, a 6-inch square guardrail placed, and a shed, 12 by 24 feet, built on the float. The float was fastened to two concrete anchors by 1-inch galvanized wire rope, and four mooring cleats were provided.

#### NEW MASSETT

The superstructure of the wharf approach, 14 feet wide, was entirely renewed for a length of 291 feet by 14 feet, from the shore end.

## NEW WESTMINSTER

Repairs and renewals were made to the wharf and involved the placing of caps, joists and decking. A 4-pile dolphin was driven at the southeast corner of the wharf.

## OKANAGAN LAKE

A new pile-driver hull including housing and pile-driver leads was built to replace the old departmental pile-driver plant at Okanagan Lake. The hull is 23 feet wide by 60.7 feet long, built of creosoted coast fir.

## OKANAGAN RIVER

The work of constructing a clay and gravel mound dam, commenced last year under contract, was completed. The experimental dam was removed, the old control dam partially removed, and bank protection work made below the new dam. Winches and lifting apparatus were installed and inspection hatches constructed.

## PHIPP'S POINT

An extension of concrete mass construction was made to the wharf. It is 8 feet wide by 100 feet long, with an average height of about 7 feet. It has 8- by 10-inch vertical timber bumper pieces placed 8 feet apart and fastened to the concrete with 1-inch tie-rods. A small freight shed, 14 by 18 feet, was built on the bank adjacent to the concrete pier.

## PORT ALBERNI

To increase the accommodation for fishing boats two new floats, 306½ and 302.8 feet long, respectively, were built under contract. They extend westerly from the existing float landings, and are held in place by creosoted mooring piles. The floats are of cedar log construction with 6- by 10-inch stringers, 3- by 6-inch joists, 4- by 4-inch guard and decked with 2- by 8-inch plank. The piles are braced with 6-inch square bracing. A dolphin of seven creosoted piles was driven at the northerly end of the face of the Assembly wharfhead.

## PORT ESSINGTON

A floating landing approach, 317 by 8 feet, was built on untreated bearing piles. On both sides of the approach four floats, each 40 by 5½ feet, were constructed, and at the west end of these floats a floating landing, 22 by 21½ feet, was built and connected to the approach by a gangway, 44 by 4 feet. The work was done by contract.

## PORT MANN

A pile-trestle approach, 8 by 140 feet, with a gangway, 6 by 30 feet, and a float, 26 by 50 feet, held in position by two 4-pile dolphins, was constructed under contract. The trestle consists of eleven 2-pile bents spaced at 14-foot centres. The float is made of six cedar logs, with a minimum diameter of 30 inches, each 50 feet long, and two logs, each 46½ feet long. There are eleven cross-ties, each 4 by 16 inches by 20 feet, and two end-ties of shorter length to allow spacing for mooring dolphins. The decking is 2 by 12 inches, with a 4- by 6-inch guard.

## PORT MOODY

The caps, joists, stringers, decking, guard and handrail were renewed in the deck superstructure of the wharf approach, for a length of 312 feet by its width of 16 feet, from the outer end of the old pierhead outwards. Repairs were made to 310 of the original fir-bearing piles in the approach, which had been eaten by limnoria, by sheathing them with 3 inches of concrete to the required height.

## PORT RENFREW

An extension, 30 feet by 30 feet 10 inches, was made to the wharfhead. This extension is supported by piles, reinforced by brace piles and sway braces, and capped with 12- by 12-inch timber. The stringers are 10 by 12 inches, joists, 3 by 10 inches, and decking, 3 by 12 inches. In the old portion of the wharf twenty untreated fender piles, and in the wharfhead and approach about 50 per cent of the decking were renewed. New creosoted sway braces, 6 by 8 inches by 34 feet, were placed on five bents in the old portion of the wharfhead.

## PORT WASHINGTON

Repairs were made under contract to the wharf and consisted in demolishing the superstructure of the existing approach and wharfhead, constructing a new approach, 75 feet long by 16 feet wide, splayed to the back of the wharfhead, building a new superstructure on the wharfhead, 80 by 40 feet, and rearranging the creosoted bearing piles. Fender and dolphin piles at the front of the wharf were renewed, and a new floating fender log was provided at the face. A new float, 16 by 25 feet, with a slip, was built at the front of the wharfhead, and a galvanized iron freight shed, 15 by 20 feet, constructed.

## POWELL RIVER

Extensive repairs were made to the wharf. The south side of the approach at the shore end was widened 6 feet for a length of 200 feet, while the north side at the outer end was widened 6 feet for a length of 165 feet. This gave a width of 20 feet for the full length of the approach. On the main wharf an area of 6,975 square feet was redecked, including the filling up of the old slipway to the level of the main deck. All the material used in the work was British Columbia cedar. The work was done by day labour. Under contract twenty-three plain fir fender piles, 50 feet long, were driven along the landing face of the wharf, twelve chocks supplied and placed, loose decking refastened, and guard-rail drift-bolted in place.

## ROBERTS CREEK

To strengthen the wharf and provide further accommodation for the increasing traffic, an extension, 10 feet wide, was made along the face and the southeast side of the wharf, which now measures 70 feet on the outer end and 147 feet on the southeast side. The work was done by contract. In addition to the contract work an addition, 12 by 20 feet, was made to the shed.

## ROYSTON

The superstructure of the wharf approach, which is 1,267 feet long by 14 feet wide, was entirely renewed for a length of 1,222 feet from high-water mark outwards, 123,714 feet b.m. of lumber being used. Seven creosoted and forty-two untreated piles were also renewed. The work was done by contract.

## SHOAL BAY

An extension to the wharf was built under contract. It is triangular in shape, being 41 feet long along the face and 40 feet on the base, with a cluster of eight piles at the apex. The piling used in the work is of creosoted fir and the timbers, except the decking, were given two coats of hot creosote before being placed. The caps are 10 by 12 inches; stringers, 6 by 11 inches; joists, 3 by 10 inches; decking, 3 by 12 inches; guardrail, 6 by 8 inches; and chocks, 6 by 10 inches. Three iron mooring cleets were placed on the extension.

## SHUSHARTIE BAY

A new floating landing, 60 by 30 feet, was constructed and moored in the bay. It was secured by means of 1-inch chains and four concrete anchors. A freight shed, 14 by 20 feet, was built on the float.

## SIDNEY

The hulk which is used as a breakwater for the automobile ferry landing, and which, owing to scour, had a considerable list, was righted. After it was lifted to a vertical position it was secured in place by means of creosoted piles and dolphins along its side. A new 21-creosoted pile dolphin was also driven.

## SORRENTO

The wharf was reconstructed. The new work is a pile-bent structure consisting of a 16- by 156-foot level approach, connected with a level platform, 32 feet wide by 52 feet long, from which extends an inclined landing platform, 32 feet wide by 155.5 feet long. This platform runs on a grade of 1 in 12 from elevation + 15 feet at the level platform to elevation + 2.1 feet at the outer end, above L.W.L. The existing 12- by 20-foot freight shed, which was transferred from the old demolished wharf to the new structure, was repaired and painted.

## SOUTH PENDER ISLAND

The wharf was entirely rebuilt under contract. The new structure has a wharfhead, 60 by 40 feet, with an approach, 120 by 14 feet, widened to the back of the wharfhead. A new float, 24 by 16 feet, was constructed with a connecting gangway, 30 by 4 feet. At the front of the wharf a slip, 10 by 20 feet, was made, and a new freight shed of galvanized iron, 14 by 15 feet, built. The bearing and mooring piles of the float are creosoted, and the fender piles untreated.

## STUART ISLAND

A new float was constructed and placed in position. It is 30 by 50 feet with an approach, 8 by 270 feet, having two sections, the inner or shore one, 150 feet long, and the outer one, 120 feet long. In the float and approach ten fir, thirty-five cedar and two hemlock logs were used, with end-ties, 8 by 14 inches, and cross-ties, 4 by 14 inches, in the approach. The decking on the float and approach is 2 by 12 inches. A shed, 10 by 16 feet, was built on the float. The float was held in position by boom sticks fastened to it and secured by eyebolts to the rock.

## SUMMERLAND

Defective piles were replaced in several bents of the wharf and two new dolphins driven. A total of twelve new fender piles were driven, in pairs, on both landing faces of the wharf, between the outer four dolphins. The double decking over the bents, in which new bearing piles were driven, was removed and replaced, the decking and joists being renewed where required. Two cavils were replaced, and the superstructure and decking of the outer ten bents, which had lifted during the last high water, were rebolted and spiked.

## UNION BAY

The timber superstructure of the wharfhead, 98 by 51 feet, was renewed, and eleven creosoted fender piles were driven at the front of the wharf. A new slip, 30 feet long by 9 feet wide, was constructed at the front of the wharf, and a freight shed of galvanized iron, 18 by 25 feet, built. The superstructure and handrail of the wharfhead approach were renewed for a length of 200 feet from the shore end, involving the driving of twenty-three new bearing piles. A new float, 35 by 14 feet, was also built. The work was done by contract.

## VANCOUVER

*Stanley Park Retaining Wall.*—During the year 375 feet of wall, including coping and one set of granite steps, was constructed. The wall is built of granite rubble boulders with a grout of Portland cement, and is carried to a height of 11 feet. The base is approximately 5 feet wide, and the top of the wall, 2 feet, with a granite coping, 8 by 15 inches.

## VICTORIA

*Ogden Point Piers.*—Under contract four 42-creosoted pile dolphins were placed off the corners of both piers as a safeguard to ships approaching berths. The material dredged from Victoria harbour was dumped around each dolphin to an approximate height of 35 feet below L.W.L. to provide greater stability. To act as floating fenders fifty-one logs, each 59½ feet long, were secured by chains, which pass through the logs and are attached to 18-inch square concrete blocks. As the brace piles were loosened by the action of the sea, the dolphins were strengthened by new and heavier timber walings and ¾-inch wire rope and chain. To provide protection against the heavy sea breaking over the top of the piers, the walls at the end of each pier were raised 5½ feet, and a bullnose provided at the top. Two heavy bollards were removed from the end of each pier and placed on top of the parapet walls. A new float, with a connecting gangway, 25 feet by 3 feet 10 inches, was built at the west end of the Government wharf and secured in place by creosoted mooring piles.

## WILLIAM HEAD

*Quarantine Station Wharves.*—At the front of the main wharf 1,750 and 1,562 lineal feet, respectively, of creosoted bearing and brace piles, and 104 untreated fender and dolphin piles were renewed. A new boat-house float, 45 by 20 feet, was built and the old boat house, after being repaired, was placed on the new float. The float is connected to the shore by means of a short pile approach with a gangway, 32 by 4 feet. In addition two dolphin creosoted piles, with one bearing and one fender creosoted pile, were driven at the coal wharf. The work was done by contract. The copper sheathed piles in the wharfhead were repaired by day labour.

## GENERALLY

Repairs were made to the following works:—

Blubber Bay, wharf; Burdwood Bay, float; Burgoyne Bay, wharf; Carr's Landing, wharf; Chemainus, approach; Church House, float; Coal Harbour, approach; Cowan's Cove, float; Cracroft, float; Crescent Bay, wharf; Deer Park, wharf; Donley's Landing, float; Ewing's Landing, wharf; Gillies Bay, float; Gordon Road, wharf; Graham Landing, wharf; Hardy Bay, wharf; Hopkins Landing, float; Kaslo, wharf; Kuper Island, wharf; Kuskanook, wharf; Lund, wharf; Manson's Landing, wharf; Nelson, storehouse; Okanagan Centre, wharf; Procter, wharf; Quathiaski Cove, approach; Quatsino, wharf; Rivers Inlet, float; Russell's Landing, wharf float; Sandspit, wharf; Sayward, wharf; Seaford, float; Squirrel Cove, float; Sturdies Bay, wharf; Van Anda, wharf; West Demars, wharf; White Rock, wharf; Willow Point, wharf.

The following works were commenced but were unfinished at the end of the fiscal year:— :

Halecyon, wharf reconstruction; Johnson's Landing, wharf reconstruction; Mirror Lake, wharf reconstruction; Needles, wharf reconstruction; Prince Rupert, construction of floats.

## DREDGING OPERATIONS

## CONTRACT DREDGING AND DREDGING BY DAY LABOUR, 1929-30

- Anse à la Croix, East, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$1,212.03. Object of work: removal of rocks and boulders from beaching ground and improving fishing harbours in mouth of Ruisseau Deschênes.
- Anse à la Croix, Ste. Félicité, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$500. Object of work: removing boulders.
- Anse à Mercier, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$193.05. Object of work: improving harbour.
- Anse au Griffon, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$150.39. Object of work: improving C. Robinson's harbour and the fishing harbour of T. English at Trait Carré.
- Baie la Vallière, P.Q.*—Under agreement with A. Laperrière, dredge W. Robidoux. Quantity removed, 5,228 cubic yards, place measurement, castover, at 30 cents per cubic yard, class "B", clay, sod. Total expenditure, \$1,568.40. Work commenced October 28, completed November 22. Object of work: continuing the work of opening a channel through marsh at mouth of the Yamaska river.
- Beauport, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 5,110 cubic yards, scow measurement, at \$1 per cubic yard, class "B", mud, clay, stones, boulders. Total expenditure, \$5,801.23. Work commenced June 1, completed August 17. Object of work: to give more facilities to the schooners calling at wharf.
- Bic, Que.*—Under day labour with District Engineer Amiot, hand dredging. Quantity removed, 2,200 cubic yards, place measurement, at \$1 per cubic yard, class "B", clay, stones, gravel. Total expenditure, \$2,500. Object of work: extension of channel.
- Brooklyn, N.S.*—Under contract No. 18023 with the Beacon Dredging Company, dredges Beacon Bar and Leonfield. Quantity removed, 174,693.9 cubic yards, scow measurement, at 62½ cents per cubic yard, and 23.33 cubic yards, place measurement, class "A", at \$6 per cubic yard. Mud, sand, sawdust and boulders. Amount passed for payment, \$109,323.68. Work commenced May 28 and completed November 28. Object of work: deepening channel and basin in front of Mersey Company's pier and west side of this company's main dock.
- Burlington Channel, Ont.*—Under agreement with Huffman Construction Company. Quantity removed, 2,512.77 cubic yards, place measurement, at 67 cents per cubic yard, class "B". Amount passed for payment, \$1,683.56. Work commenced August 13, completed August 20. Object of work: dredging near outer entrance.
- Byng Inlet, Ont.*—Under contract with R. G. Weddell. Quantity removed, 516 cubic yards, place measurement, class "A", at \$8.50 per cubic yard, granite rock. Amount passed for payment, \$2,925.72. Work commenced April 17, suspended for season May 31. Object of work: to remove dangerous obstructions from Watt's Bend in Magnetawan river.  
NOTE.—Work paid for at two-thirds of contract price.
- Byng Inlet, Ont.*—Under contract No. 18092 with Randolph Macdonald Company. Quantity removed 6,080 cubic yards, place measurement, at \$5.88 per cubic yard, class "A", granite rock. Amount passed for payment, \$23,833.60. Work commenced September 4, suspended for season November 15. Object of work: improvement of channel.  
NOTE.—Paid for at two-thirds of contract price, as rock not yet removed though it is drilled and blasted.
- Cacouna, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 700 boulders. Total expenditure, \$1,242.58. Work commenced July 17, completed August 15. Object of work: to permit the landing of small launches at high tide and provide a beach for tourists.
- Campbellton, N.B.*—Under contract No. 15901 with Felix Michaud, dredge Excavator. Quantity removed, 23,185.6 cubic yards, scow measurement, at 57½ cents per cubic yard, class "B", mud. Amount passed for payment, \$13,331.73. Work resumed June 19, completed October 7. Object of work: contract completion for improving berthing facilities at deep water wharf.
- Cap à la Baleine, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$1,100.38. Object of work: removing ledge rock and boulders from Anse du Cap à la Baleine and boulders and rock from Anse à Dufour.
- Cap au Renard, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$100. Object of work: removing boulders.
- Cap Chat, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$100. Object of work: removing rock from fishing harbour.

- Cap des Rosiers, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$312.29. Object of work: removing boulders from various fishing harbours.
- Cariboo Islands, Que.*—Under District Engineer Sabourin. Total expenditure, \$200. Object of work: removing boulders.
- Charlemagne, P.Q.*—Under contract No. 18018 with the St. Lawrence and Great Lakes Dredging and Construction Company, dredge *Ella M.* Quantity removed, 21,000 cubic yards, scow measurement, class "B", at 30 cents per cubic yard, clay, sawdust, and logs. Amount passed for payment, \$6,300. Work commenced August 5, completed September 27. Object of work: deepening an area in front of the St. Lawrence Paper Mill Company's wharf.
- Charlemagne, P.Q.*—Under contract with the Russell Construction Company, dredge *Jack Canuck.* Quantity removed, 4,118 cubic yards, scow measurement, at 30 cents per cubic yard, class "B", sand, clay. Amount passed for payment, \$1,235.40. Work completed 1928.

NOTE.—To pay for material removed over the authorized quantity.

- Château Richer, P.Q.*—Under agreement with T. Lacouline. Quantity removed, 2,148 cubic yards, place measurement, at 90 cents per cubic yard, class "B". Amount passed for payment, \$1,933.20. Work completed November 20. Object of work: dredging berths on each side of Lacouline's wharf.
- Chlorydormes, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$100. Object of work: improving fishing harbour at Anse à la Rogne.
- Cobourg, Ont.*—Under contract 18001 with National Sand and Material Company, dredge Baxter Dick. Quantity removed, 28,892 cubic yards, scow measurement, at 47½ cents per cubic yard, class "B", sand. Amount passed for payment, \$13,723.70. Work commenced June 12, completed July 6. Object of work: removing shoal area at harbour entrance.
- Collingwood, Ont.*—Under contract with R. G. Weddell, dredge *P. J. Carey.* Quantity removed, 64,425 cubic yards, place measurement, class "B", at 82 cents per cubic yard, 13,000 cubic yards, place measurement, class "B", at 70 cents per cubic yard, 5,400 cubic yards, place measurement, class "A", at \$3.68 per cubic yard, 880 cubic yards, place measurement, class "A", at \$2.45 per cubic yard (blasted but not yet removed). Amount passed for payment, \$83,956.50. Work commenced April 12, suspended for season November 26. Object of work: widening and deepening the main ship channel to the new elevator.
- Courtenay River, B.C.*—Under contract No. 18080 with North Western Dredging Company, dredge No. 4. Quantity removed, 53,967.3 cubic yards, place measurement, castover, class "B", at 89 cents per cubic yard and 18 cubic yards, place measurement, class "A", at \$9 per cubic yard. Amount passed for payment, \$48,942.89, including lump sum of \$750 for removal of dolphin piles. Work commenced August 26, 1929, completed January 17, 1930. Object of work: to facilitate navigation for small coasting vessels to and from wharves at Courtenay.
- Douglastown, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$108.25. Object of work: improving fishing harbour.
- Dundee, P.Q.*—Under contract No. 19028 with Cummins and Robinson, dredge clam No. 1. Quantity removed, 23,441 cubic yards, place measurement, at 25 cents per cubic yard, class "B", clay, mud, boulders. Amount passed for payment, \$5,860.25. Work commenced September 9, suspended for season November 20. Object of work: draining and improving Sherwood and Bronson outlets for about 3,600 feet.
- Dupuis' Cove, P.Q.*—Under day labour with District Engineer Amiot. Amount passed for payment, \$475.05. Object of work: removal of boulders to improve cove and give shelter to twenty-five fishing smacks at Ruiseau Castor.
- Echourie-Ste. Anne des Monts, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure \$87. Object of work: improving harbour.
- Fame Point, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$100. Object of work: improving fishing harbours.
- First Narrows, Calamity Point, Vancouver, B.C.*—Under contract No. 16050 with the North Western Dredging Company. Quantity removed, 621,959 cubic yards, place measurement, at 18.7 cents per cubic yard. Amount passed for payment, \$116,306.33. Work commenced April 1, 1929, suspended for season March 27, 1930. Object of work, widening and straightening entrance to Vancouver harbour.
- Fort William, Ont.*—Under contract No. 15959 with the Canadian Dredging Company, dredge *Leland.* Quantity removed, 83,861 cubic yards, place measurement, class "B", at 24 cents per cubic yard, 18 cubic yards, place measurement, class "A", at \$6 per cubic yard, place measurement, sand, clay, rock. Amount passed for payment, \$20,234.64. Work resumed May 6, completed June 13. Object of work: completion of the redredging to 25 feet below zero of an area of the mouth of the Mission river, 1,900 by 225 feet.

*Fort William, Ont.*—Under contract No. 18000 with the Great Lakes Dredging and Contracting Company, dredge *Dominion*. Quantity removed, 188,843 cubic yards, place measurement, class "B," at 17½ cents per cubic yard, 10 cubic yards, place measurement, class "A," at \$7.50 per cubic yard, sand, clay, rock. Amount passed for payment, \$41,148.35, including \$7,553.72 for overtow. Work commenced September 7, completed November 14. Object of work: deepening an area in the Kaministiquia river above the West Fort turning basin to serve as a slip for the dock of the Great Lakes Paper Company.

*Fort William, Ont.*—Under contract No. 18000 with the Great Lakes Dredging and Contracting Company, dredge *Dominion*. Quantity removed, 194,040 cubic yards, place measurement, at 17½ cents per cubic yards, class "B," sand, clay. Amount passed for payment, \$40,844.86, including \$6,402.76 for overtow. Work was commenced on July 8, suspended on September 6, resumed November 14 and suspended for season November 22. Object of work: deepening, straightening and widening the Kaministiquia river, near the Canada Iron Foundry.

*Fourchu, N.S.*—Under contract No. 19007 with the Halifax Dredging Company, dredge No. 2. Quantity removed, 21,967.8 cubic yards, scow measurement, at 75 cents per cubic yard, class "B," mud. Amount passed for payment, \$16,475.85. Work commenced September 24, suspended for season November 23. Object of work: deepening entrance channel, a turning basin and berth at the site of the proposed wharf of the British Metals Corporation (Canada) Limited.

*Fraser River, North Arm, B.C.*—Under contract No. 19089 with the British Columbia Bridge and Dredging Company, dredge B.C.B. and D. Co. No. 1. Quantity removed, 460,427 cubic yards, place measurement, at 14 cents per cubic yard, class "B." Total expenditure, \$64,459.78. Work commenced November 15, 1929, suspended for season March 21, 1930. Object of work: dredging cuts 1, 2, 2A, and 5.

*Gendron's Rapids, P.Q.*—Under day labour with District Engineer St. Laurent. Quantity removed, 50 boulders. Total expenditure, \$150. Work commenced September 6, completed September 15. Object of work: removal of boulders from rapids.

*Goderich, Ont.*—Under contract No. 15872 with W. L. Forrest, dredge *M. Clairmont* and drill boat *Pat Murdock*. Quantity removed, 13,204 cubic yards, place measurement, at \$3.17 per cubic yard, 3,068 cubic yards, place measurement, at \$2.11 per cubic yard, blasted but not removed, 9,218 cubic yards, place measurement, at \$1.06 per cubic yard, being balance paid on the contract rate per cubic yard for material blasted last year but removed in 1929-30. All material is class "A," limestone rock. Amount passed for payment, \$58,101.24. Work was resumed April 1 and suspended for season November 30. Object of work, completion of extension to slip east of Goderich elevator.

*Goderich, Ont.*—Under agreement with Kilmer and Barber. Quantity removed 30 cubic yards, place measurement, at \$3 per cubic yard, class "A," rock. Amount passed for payment, \$90. Work done in October. Object of work: removing a high spot in outer harbour.

*Goderich, Ont.*—Under contract No. 18091 with the C. S. Boone Dredging and Construction Company, dredge *Isobel*. Quantity removed, 43,027 cubic yards, place measurement, class "B," at 38 cents per cubic yard, 7,400 cubic yards, place measurement, class "A," at \$2.15 per cubic yard, 12,912 cubic yards, place measurement, class "A," blasted, but not removed, at \$1.43 per cubic yard. Mud, gravel, rock. Amount passed for payment, \$50,724.42. Work commenced September 12, suspended for season November 30. Object of work: widening slip east of elevators and existing turning basin in the inner harbour.

*Grand Pabos, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$50. Object of work: improving fishing harbour.

*Grande Grève, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$175. Object of work: removing boulders.

*Grande Rivière, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$151.26. Object of work: cleaning harbours.

*Grande Vallée, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$660.59. Object of work: removal of boulders at fishermen's main harbour at outlet of Grande Vallée river.

*Grands Capucins, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$311.87. Object of work: removal of boulders to improve fishing harbour.

*Grands Méchins, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$303.43. Object of work: removing boulders from east and west harbours.

- Grosse Isle, P.Q.*—Under contract No. 18009 with the National Dock and Dredging Company, dredge *New Welland*. Quantity removed, 26,010 cubic yards, scow measurement, at 36 cents per cubic yard, class "B," mud. Amount passed for payment, \$10,443.60. Work commenced July 2, completed July 10. Object of work: deepening berth on both sides of western wharf, 150 by 60 feet.
- Guysborough, N.S.*—Under contract No. 15788 with the Beacon Dredging Company, dredge *New Brunswick*. Quantity removed, 4,229.1 cubic yards, scow measurement, at 92½ cents per cubic yard, class "B," clay, boulders, and gravel. Amount passed for payment, \$3,911.91. Work resumed May 11, completed July 30. Object of work: completion of contract for improvement of harbour entrance for navigation.
- Hamilton, Ont.*—Under agreement with the Russell Construction Company, dredge derrick No. 4. Quantity removed, 6,262 cubic yards, place measurement, at 68 cents per cubic yard, class "B," sand, clay, cinders, sewage. Amount passed for payment, \$4,258.16. Work commenced December 2, completed December 10. Object of work: dredging near North End Park.
- Hamilton, Ont.*—Under contract No. 19021 with the R. C. Huffman Construction Company, dredge No. 3 suction. Quantity removed, 110,600 cubic yards, place measurement, at 24½ cents per cubic yard, class "B," silt, clay, sand, mud. Amount passed for payment, \$26,820.50. Work commenced December 5, suspended for season March 31, 1930. Object of work: deepening approach and slipways into proposed new terminal for Canada Steamship Lines.
- Hamilton, Ont.*—Under contract No. 19052 with J. P. Porter and Sons. Quantity removed, 201,669 cubic yards, place measurement, at 27.85 cents per cubic yard, class "B," sand, silt, clay, gravel, mud. Amount passed for payment, \$56,164.82. Work commenced September 13, completed November 25. Object of work: dredging channel to, and basin at the wharf of the Steel Company of Canada Limited.
- Hamilton, Ont.*—Under contract No. 15917 with the Hamilton By-products and Coke Ovens Limited, dredge *Shuniah*. Quantity removed, 97,926.7 cubic yards, place measurement, at 21 cents per cubic yard, class "B," sand, clay, rock. Amount passed for payment, \$20,564.61. Work commenced May 6, completed June 13. Object of work: dredging channel.
- House Harbour, M.I. P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$2,113.91. Object of work: construction of slipway for dredge 126. P.W.D.
- Ile Perrot, P.Q.*—Under contract No. 18059 with Les Chantiers Manseau, dredge *B.S.L.* Quantity removed, 1,501 cubic yards, place measurement, at \$7.50 per cubic yard, class "A," rock. Amount passed for payment, \$11,257.50. Work commenced November 2, suspended for season November 27. Object of work: deepening entrance channel leading to wharf at Ste. Jeanne de l'Ile Perrot.
- Ile Verte, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 2,200 cubic yards place measurement. Amount passed for payment, \$3,500. Total expenditure, \$3,617.49. Work commenced October 8, completed November 15. Object of work: dredging on both sides of the wharf.
- Jersey Cove, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$50. Object of work: improving fishing harbour.
- Kincardine, Ont.*—Under contract No. 17095 with C. S. Boone Dredging and Construction Company, dredge General Meade. Quantity removed, 40,000 cubic yards, scow measurement, at 39 cents per cubic yard, class "B," sand, clay, gravel, silt. Amount passed for payment, \$15,600. Work commenced July 2, completed October 1. Object of work: to maintain entrance channel and turning basin.
- Kingston-Little Cataraqui Bay, Ont.*—Under contract No. 20023 with the St. Lawrence and Great Lakes Dredging and Construction Company Limited, dredge *Cyclone*. Quantity removed, 95,265 cubic yards, place measurement, at 36 cents per cubic yard, class "B." Amount passed for payment, \$34,295.40. Work commenced November 5, suspended for season December 11. Object of work: dredging slips at Kingston Elevator Company's proposed plant.
- Kingston, Ont.*—Under agreement with R. G. Weddell, dredge *Menesetung*. Quantity removed, 777 cubic yards, place measurement, at \$6.20 per cubic yard, class "A," 213 cubic yards, place measurement, at 85 cents per cubic yard, class "B," limestone. Amount passed for payment, \$4,998.45. Work commenced June 11, completed July 31. Object of work: dredging slip of Crawford Coal Co.
- Kingston, Ont.*—Under contract No. 15896 with R. G. Weddell, dredge *Menesetung*. Quantity removed, 978 cubic yards, place measurement, at \$5.85 per cubic yard, class "A," solid rock and boulders. Amount passed for payment, \$5,721.30. Work resumed May 28, completed August 2. Object of work: deepening an area in front of the University and Hospital Dock.

*Lake Nipissing, Ont.*—Under day labour with District Engineer St. Laurent. Amount passed for payment, \$149. Work commenced February 22, completed March 8. Object of work: to clear boulders and loose material from lake on left hand side of the entrance to the rock cut at Monetteville.

*Lake St. Louis, P.Q.*—Under contract with the St. Lawrence and Great Lakes Dredging and Construction Company, dredge *Bruxelles*. Quantity removed, 1,533.4 cubic yards, place measurement, at \$3 per cubic yard, class "A," 7,975.6 cubic yards, place measurement, at 55 cents per cubic yard, class "B," boulders, hardpan, shale. Amount passed for payment, \$8,986.78. Work commenced November 1, suspended for season November 13. Object of work: deepening and widening ship channel near Dorval Island and upstream therefrom.

*Lake St. Louis, P.Q.*—Under contract No. 20,000 with J. P. Porter and Sons, dredge *Bruxelles*. Quantity removed, 2,518 cubic yards, place measurement, at \$5.40 per cubic yard, class "A," 2,370 cubic yards, place measurement, at 75 cents per cubic yard, class "B" rock. Amount passed for payment, \$15,374.70. Work commenced November 15, suspended for season November 28. Object of work: deepening and widening ship channel area "H" Windmill Point.

*L'Anse à Fougère, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$100. Object of work: removing boulders.

*L'Anse St. Yvon, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$271.73. Object of work: removing boulders.

*Laurenson's Creek-Kenora, Ont.*—Under day labour with District Engineer Harcourt. Amount passed for payment, \$587.75. Work completed July 3. Object of work: to improve channel at Kenora.

*Lévis, P.Q.*—Under agreement with National Dock and Dredging Corporation, dredge *Stephen D.* Quantity removed, 1,305 cubic yards, place measurement, at \$1.10 per cubic yard. Amount passed for payment, \$1,435.50. Inspection \$44. Total expenditure, \$1,479.50. Work commenced November 26, completed November 28. Dredging at ferry wharf.

*Little Aldouane River, N.B.*—Under day labour with District Engineer Stead. Amount passed for payment, \$3,984.26. Work commenced July 26, completed October 11. Object of work: widening and straightening the channel for 400 feet immediately below the wharf.

*Little Current, Ont.*—Under contract No. 15888 with Randolph Macdonald Company, dredge *R.M.C. No. 10* and drill boat *Rock Prince*. Quantity removed, 18,039 cubic yards, place measurement, at \$3.45 per cubic yard, 210 cubic yards, scow measurement, at 90 cents per cubic yard, class "B," rock, boulders. Amount passed for payment, \$62,423.55. Work resumed March 23, completed August 20. Object of work, completion of the widening of Little Current channel to facilitate west passage of lake freighters.

*Little Montreal River, P.Q.*—Under contract with G. Lorrain. Quantity removed, 29,302.5 cubic yards, place measurement, at 35 cents per cubic yard, class "B," 128 cubic yards, place measurement, class "A," at \$2.25 per cubic yard, clay, sand, gravel, rock, hardpan, boulders. Amount passed for payment, \$5,271.93 (amount contributed by department). Work commenced April 15, suspended for season, November 15. Object of work: drainage of about 15,000 acres for cultivation.

*Liverpool, N.S.*—Under contract 18,077 with the St. John Dry Dock & Shipbuilding Company, dredge *Leconfield*. Quantity removed, 44,913.7 cubic yards, scow measurement, at 70 cents per cubic yard, class "B." Amount passed for payment, \$31,439.59. Work commenced August 29, completed September 25. Object of work: deepening channel through bar at harbour mouth.

*Manche d'Epée, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$99.60. Object of work: removing boulders.

*Mitchell's Bay, Ont.*—Under contract No. 18035 with Cummins and Robinson, dredge *C and R No. 3*. Quantity removed, 41,251 cubic yards, place measurement, at 18 cents per cubic yard, class "B," clay, sand, silt. Amount passed for payment, \$7,425.18. Work commenced September 16, suspended for season November 28. Object of work: deepening channel for 1,270 feet and widening it to 60 feet.

*Nicolet River, P.Q.*—Under contract No. 18021 with the National Dock and Dredging Corporation, dredge *New Welland*. Quantity removed, 22,824 cubic yards, scow measurement, at 38½ cents per cubic yard, class "B," sand, clay, stones. Amount passed for payment, \$8,787.24. Work commenced June 17, completed June 27. Object of work: deepening channel from river St. Lawrence towards the downstream wharf for about a distance of 1,600 feet.

- Norton Creek (Ste. Clothilde), P.Q.*—Under contract with the National Dock and Dredging Corporation, dredges, steam shovels Nos. 1 and 2. Quantity removed, 13,864 cubic yards, place measurement, at \$2.70 per cubic yard, class "A," 16,071 cubic yards, place measurement, at 58 cents per cubic yard, class "B," sand, clay, gravel, boulders, rock. Amount passed for payment, \$23,376.99 (amount contributed by Department). Work commenced June 14, suspended for season November 16. Object of work: drainage of approximately 18,000 acres for cultivation.
- Notre Dame de l'Isle Verte, P.Q.*—Under day labour with District Engineer Sabourin. Total expenditure, \$885.50. Work commenced July 16, completed August 8. Object of work: blasting boulders and cleaning channel.
- Oshawa, Ont.*—Under contract No. 19026 with the Canadian Dredging Company, dredge hydraulic No. 2. Quantity removed, 80,750 cubic yards, place measurement, at 21 cents per cubic yard, class "B," sand, gravel, clay. Amount passed for payment, \$16,957.50. Work commenced October 16, suspended for season December 14. Object of work: deepening approach, entrance channel and basin.
- Pabos Mills, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$101.02. Object of work: improving fishing harbour.
- Parry Sound, Ont.*—Under contract No. 18041 with Randolph Macdonald Company, dredge R.M.C. No. 10. Quantity removed, 26,469.6 cubic yards, place measurement, at 48 cents per cubic yard, class "B," sand, mud, mill waste. Amount passed for payment, \$12,705.40. Work commenced August 13, completed October 19. Object of work: deepening area in vicinity of the government wharf.
- Petit Cap, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$300.10. Object of work: improving fishing harbours.
- Petit de Grat, N.S.*—Contract No. 18060 with the Beacon Dredging Company, dredge New Brunswick No. 1. Quantity removed, 21,676.7 cubic yards, scow measurement, at \$1 per cubic yard, class "B," 3,068.1 cubic yards, place measurement, at 66½ cents per cubic yard, class "B," 139.6 cubic yards, place measurement, at \$12 per cubic yard, class "A," 19.3 cubic yards, place measurement, at \$6 per cubic yard, class "A," mud, gravel, rock. Amount passed for payment, \$25,513.10. Work commenced August 13, completed November 9. Object of work: deepening the northern entrance channel and dredging to 10 feet low spring tide for coastal boats.
- Petite Anse, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$346.75. Object of work: improving fishing harbours.
- Petite Rivière Ouest, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$100. Object of work: improving fishing harbour.
- Petite Vallée, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$74.90. Object of work: removing boulders.
- Petit Matane, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$1,259.25. Object of work: removing rock reef and ledge in harbour and boulders from channel in cove at eastern limit of Petit Matane, and other harbours.
- Petits Méchins, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$600.25. Object of work: removal of boulders to improve harbour.
- Pointe aux Anglais, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 280 cubic yards, place measurement, boulders. Total expenditure, \$386.20. Work commenced September 16, completed October 25. Object of work: removing boulders from harbour.
- Point Edward, Ont.*—Under day labour with District Engineer Harcourt. Total expenditure, \$3,976.50. Object of work: survey and inspection of sand and gravel dredging in Upper St. Clair river, Ont.
- Pointe Frégate, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$175.01. Object of work: removing boulders from harbour.
- Pointe Jaune, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$50. Object of work: removing boulders.
- Pointe St. Pierre, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$50. Object of work: improving fishing harbour.
- Poncheville, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$1,106.90. Object of work: removal of boulders from fishing harbour.
- Portage St. Hélier, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$50. Object of work: removing boulders.
- Port Arthur, Ont.*—Under contract No. 15905 with Canadian Dredging Company Limited, dredge *Leland*. Quantity removed, 3,287 cubic yards, place measurement, at 19 cents per cubic yard, class "B," 723 cubic yards, castover, place measurement, at 12½ cents

per cubic yard, class "B," clay, sand. Amount passed for payment, \$716.11. Work commenced May 1, completed May 4. Object of work: completion of contract No 15905 at Reliance elevator slip extension.

*Port Arthur, Ont.*—Under agreement with Canadian Dredging Company, dredge *Dominion*. Twelve hours rental of plant at \$50 per hour. Amount passed for payment, \$600. Work done October 6. Object of work: dredging at Union Terminal Elevator.

*Port Dover, Ont.*—Under contract No. 15974 with A. C. Stewart and Company sublet to Chatham Dredging and General Contracting Company, dredge *St. Clair*. Quantity removed, 52,275 cubic yards, scow measurement, at 60 cents per cubic yard, 7,220 cubic yards, scow measurement, crib material, at \$1 per cubic yard, 1,035 cubic yards, place measurement, castover, at 40 cents per cubic yard, class "B," sand, clay and crib material. Cost of dredging, \$38,999. Object of work: dredging in connection with construction of new east pier under contract 15974 with A. C. Stewart and Co.

*Port Dover, Ont.*—Under agreement with the Chatham Dredging and General Contracting Company. Quantity removed, 6,109 cubic yards, scow measurement, at 60 cents per cubic yard, class "B," sand. Amount passed for payment, \$3,665.40. Work commenced May 30, completed June 15. Object of work: to increase accommodation in harbour on west side of west pier.

*Port Lewis, P.Q.*—Under agreement with Les Chantiers Manseau, dredge *B.S.L.* Quantity removed, 1,017 cubic yards, place measurement, at \$4.25 per cubic yard, class "A," 24,996 cubic yards, scow measurement, at 37 cents per cubic yard, class "B," sand, clay, boulders. Amount passed for payment, \$13,570.77. Work commenced October 10, completed October 31. Object of work: deepening the west entrance channel and in front of the government wharf.

*Port Stanley, Ont.*—Under contract No. 18043 with the Frontenac Dredging Company, dredge *St. Lawrence*. Quantity removed, 57,472 cubic yards, scow measurement, at 40½ cents per cubic yard, class "B," clay, sand, silt. Amount passed for payment, \$23,276.16. Work commenced August 5, completed November 21. Object of work: deepening entrance channel and inner harbour.

*Prescott, Ont.*—Under contract No. 17098 with Canadian Dredging Company, dredge *Clam Shell No. 5*. Quantity removed, 522,188 cubic yards, place measurement, at 38½ cents per cubic yard, class "B," sand, clay. Amount passed for payment, \$201,042. Work commenced June 29, suspended for season November 20. Object of work: development of harbour.

*Richelieu River, P.Q.*—Under contract with Les Chantiers Manseau, dredges *B.S.I. No. 1* and *Bruxelles*. Quantity removed, 360,757 cubic yards, place measurement, at 19 cents per cubic yard, class "B," sand, clay, and two wrecks. Amount passed for payment, \$86,275.92. Work resumed April 10, completed October 14. Object of work: deepening mouth of Richelieu river to 27 feet and deepening channel between Sorel and St. Ours to 12 feet. The overtow amounted to \$9,214.79 and removal of wrecks to \$8,517.30.

*Rimouski River, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$2,990.93. Object of work: widening the channel over Cay Mouton and cleaning an area 1,000 by 50 feet near Price Bros. wharf.

*Rivière aux Mulets, P.Q.*—Under day labour with District Engineer Dansereau. Quantity removed, 1,300 cubic yards, place measurement, class "A," rock and boulders. Amount passed for payment, \$2,003.11. Object of work: removal of rocks and boulders.

*Rivière au Renard, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$50. Object of work: improving fishing harbour.

*Rivière Blanche, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 400 cubic yards, place measurement, boulders. Amount passed for payment, \$1,500.05. Work commenced September 20, completed October 26. Object of work: removal of boulders impeding navigation.

*Rivière des Ilots, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$697. Object of work: improving harbour.

*Rivière des Prairies, P.Q.*—Under contract No. 18011 with Les Chantiers Manseau, dredge *R.M. No. 8*. Quantity removed, 240,705 cubic yards, place measurement, at 32 cents per cubic yard, class "B," clay. Amount passed for payment, \$77,025.60. Work commenced July 2, suspended for season November 26. Object of work: deepening channel from Bout de l'Île to the village of Rivière des Prairies.

*Rivière du Lièvre-Long Rapids, P.Q.*—Under day labour with District Engineer St. Laurent. Quantity removed, 200 cubic yards, place measurement. Amount passed for payment, \$987.16. Work commenced February 11, completed March 8. Object of work: to remove point of rock in Long Rapids.

- Rivière du Loup (en bas), P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 250 cubic yards, place measurement, of ballast stone. Amount passed for payment, \$450. Work commenced July 19, completed August 19. Object of work: removing from channel the ballast stone that had fallen out of Viel's wharf.
- Rivière Petit Sault (Isle Verte), P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 1,400 cubic yards, place measurement, at \$1 per cubic yard, mud, clay, sand and gravel, and 30 boulders blasted. Amount passed for payment, \$1,600. Work commenced July 13, completed September 14. Object of work: to permit small scows loaded with sea grass to come near the road.
- Rivière St. François, P.Q.*—Under contract No. 18054 with A. Laperrière, dredges *W. Robidoux No. 1* and *W. Robidoux No. 2*. Quantity removed, 59,617 cubic yards, place measurement, at 23 cents per cubic yard, class "B," clay, sand, gravel. Amount passed for payment, \$13,711.91. Work commenced July 30, completed November 21. Object of work: deepening several areas.
- Rivière Verte, Isle Verte, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 200 cubic yards, place measurement, boulders. Total expenditure, \$599.46. Work commenced July 22, completed September 6. Object of work: to remove shoal of boulders between two wharves.
- Rondeau, Ont.*—Under day labour with District Engineer Craig. Total expenditure, \$2,800. To pay balance on work already performed. Object of work: harbour improvements.
- Ruisseau Arbour, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$75. Object of work: improving harbour.
- Ruisseau des Olives, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$75.63. Object of work: improving harbour.
- Ruisseau Jaco Hughes West, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$299.69. Object of work: removal of boulders from fishermen's harbour west of Ruisseau Jacquot Hughes harbour.
- Ruisseau Rouge, Isle Verte, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 300 cubic yards, place measurement, clay. Total expenditure, \$299. Work commenced August 13, completed September 30, 1929. Object of work: redredging channel.
- Sarnia, Ont.*—Under contract No. 18063 with the Canadian Dredging Company, dredge *Primrose*. Quantity removed, 259,147 cubic yards, place measurement, at 20 cents per cubic yard, class "B" sand, silt. Amount passed for payment, \$51,829.40. Work commenced June 18, completed August 25. Object of work: widening and deepening an additional slip to the elevator entrance involving 99,376 cubic yards and extending the storage basin involving 159,771 cubic yards.
- Sarnia, Ont.*—Under agreement with Detroit River Construction Co. Amount passed for payment, \$1,290. Object of work: to remove cluster piles and mooring piles along the south side of the elevator slip preparatory to dredging.
- Sault Ste. Marie, Ont.*—Under day labour with District Engineer Fuller. Amount passed for payment, \$4,145.53. Object of work: survey and sweeping *re* proposed dredging and the construction of row boats.
- Sault Ste. Marie, Ont.*—Under contract No. 18039 with the Soo Dredging and Construction Company, derrick scow No. 24. rented for 400½ hours at \$13.50 per hour, removing solid rock, sand, and gravel. Amount passed for payment, \$5,406.75. Work commenced August 6, completed October 16. Object of work: cleaning and sweeping approaches at New Ontario wharf and at Algoma Central Railway Coal wharf.
- Sault Ste. Marie, Ont.*—Under agreement with the Soo Dredging and Construction Company, derrick scow No. 24, rented for 179 hours at \$13.50 per hour. Amount passed for payment, \$2,416.50. Work commenced August 6, completed October 16. Object of work: removing rock shoal.
- Sault Ste. Marie, Ont.*—Under agreement with the Soo Dredging and Construction Company, dredge derrick scow No. 24, rented for 351 hours at \$13.50 per hour. Amount passed for payment, \$4,738.50. Work commenced October 17, completed November 27. Object of work: dredging on eastern side of approach to government wharf.
- Sault Ste. Marie, Ont.*—Under contract No. 19000 with A. B. McLean and Sons, dredge *McLean No. 4*. Quantity removed, 513 cubic yards, place measurement, class "A," at \$32.56 per cubic yard, 262 cubic yards, place measurement, class "B," at \$2 per cubic yard. Amount passed for payment, \$17,227.28. Work commenced August 13, completed November 2. Object of work: deepening approaches at New Ontario wharf and at Algoma Central Railway Coal wharf.

- Shelter Bay, P.Q.*—Under contract No. 18057 with the National Dock and Dredging Corporation, dredge *New Welland*. Quantity removed, 10,000 cubic yards, scow measurement, at \$1.60 per cubic yard, class "B." Amount passed for payment, \$16,000. Work commenced July 25, completed July 27. Object of work: dredging a basin on north side of the wharf. *Note*.—\$6,000 charged to 1930-31.
- Shippigan, N.B.*—Under agreement with the Miramichi Dredging Company, dredge *Peter England*. Quantity removed, 1,890.8 cubic yards, scow measurement, at 79½ cents per cubic yard, class "B," sand, mud. Amount passed for payment, \$1,503.19. Work commenced May 23, completed June 8. Object of work: dredging deep water berth.
- Shippigan, N.B.*—Under agreement with the Miramichi Dredging Company, dredge *Peter England*. Quantity removed, 2,181.9 cubic yards, scow measurement, at 79½ cents per cubic yard, class "B," mud. Amount passed for payment, \$1,734.61. Work commenced June 17, completed June 27. Object of work: removal of 599.3 cubic yards scow measurement and 1,582.6 cubic yards, scow measurement, at the frost proof warehouse and Monarch Cold Storage, respectively.
- Sorel, P.Q.*—Under contract No. 15915 with Les Chantiers Manseau, dredge *Bruxelles*. Quantity removed, 35,148 cubic yards, place measurement, at 24 cents per cubic yard, class "B," clay, sand. Amount passed for payment, \$3,435.52. Work resumed on September 2, completed September 12. Object of work: to complete dredging of basins on each side of the new deep water pier.
- Sorel, P.Q.*—Under contract No. 18062 with Les Chantiers Manseau, dredge *Bruxelles*. Quantity removed, 111,920 cubic yards, place measurement, at 24 cents per cubic yard, class "B," clay, sand and two wrecks for \$3,589.92. Amount passed for payment, \$35,450.72. Work commenced August 1, suspended for season December 7. Object of work: deepening an area in Lanctot basin in connection with new wharf.
- Sydenham River, Ont.*—Under day labour with District Engineer Harcourt. Quantity removed, 160 snags. Amount passed for payment, \$1,477.20. Work commenced May 28, completed July 15. Object of work: removal of snags.
- St. Adelaïde de Pabos, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$99.90. Object of work: improving fishing harbour.
- Ste. Anne des Monts, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$113.37. Object of work: improving fishing harbour.
- St. Antoine de Tilly, P.Q.*—Under contract No. 15906 with the National Dock and Dredging Corporation, dredge *Capital*. Quantity removed, 11,261 cubic yards, scow measurement, class "B," at 90 cents per cubic yard, 321.45 cubic yards, place measurement, at \$10 per cubic yard, class "A," sand, clay, boulders. Amount passed for payment, \$13,349.40. Work resumed May 20, suspended for season September 26. Object of work: deepening channel to government wharf.
- St. Antoine de Tilly, P.Q.*—Under contract No. 18010 with the National Dock and Dredging Corporation, dredge *Capital*. Quantity removed, 5,117 cubic yards, scow measurement, class "B," at 90 cents per cubic yard, 333.38 cubic yards, place measurement, class "A," at \$10 per cubic yard, sand, clay, boulders. Amount passed for payment, \$7,939.10. Work commenced September 26, suspended for season November 20. Object of work: deepening channel.
- Ste. Félicité, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$3,756.66. Object of work: improving fishing harbours and enlarging and improving harbours at Longue Pointe. Removing boulders near west face of wharf, cleaning and digging channel through reef to give fishing boats access to beach and digging channel through reef in Ruisseau Grande Ligne harbour.
- St. Francis Harbour, N.S.*—Under contract with the Beacon Dredging Company. Quantity removed, 13,750 cubic yards, scow measurement, at 75 cents per cubic yard. Amount passed for payment, \$10,312.50. Object of work: dredging a crib seat, 100 by 45 feet, at the inner portion of the breakwater extension and a basin to provide a vessel berth on the harbour side of same structure.
- St. Joachim de Tourelle, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$150. Object of work: removing boulders.
- Thames River, Ont.*—Under day labour with District Engineer Harcourt. Total expenditure, \$1,685.85. Object of work: removal of snags.
- Toronto (East Channel), Ont.*—Under contract No. 18007 with the National Sand and Material Company, dredge *Baxter Dick*. Quantity removed, 19,311 cubic yards, scow measurement, at 34½ cents per cubic yard, class "B," sand. Amount passed for payment, \$6,662.30. Work commenced July 10, completed July 31. Object of work: deepening eastern approach to Lake Ontario.

- Toronto, Ont.*—Under contract No. 18040 with the Great Lakes Dredging and Contracting Company, dredge No. 8. Quantity removed, 44,073 cubic yards, scow measurement, at 27½ cents per cubic yard, class "B," sand, shell rock. Amount passed for payment, \$12,230.26. Work commenced August 7, suspended for season, December 5, 1929. Object of work: deepening western channel between piers and approach to lake Ontario.
- Trois Pistoles, P.Q.*—Under day labour with District Engineer Sabourin. Quantity removed, 800 cubic yards, place measurement, sand. Amount passed for payment, \$1,000. Work commenced July 6, completed August 10. Object of work: improving berths for schooners.
- Trois Ruisseaux, P.Q.*—Under day labour with District Engineer Amiot. Total expenditure, \$346. Object of work: removing boulders from fishing harbours.
- Upper St. Lawrence River, Brockville, Ont.*—Under contract No. 18076 with J. P. Porter and Sons. Quantity drilled and blasted 5,435 cubic yards, place measurement, of granite rock, class "A," at \$3.89 per cubic yard. Amount passed for payment, \$14,131. Work commenced October 21, suspended for season December 20. Object of work: improvement of channel. (Paid for at \$2.60 per cubic yard since material is not yet removed.)
- Upper St. Lawrence River, Ont.*—Under day labour with District Engineer St. Laurent. Amount passed for payment, \$8,900. Object of work: survey for dredging.
- Valleyfield, P.Q.*—Under contract No. 18022 with Les Chantiers Manseau, dredge *B.S.L.* Quantity removed, 51,497.1 cubic yards, place measurement, class "B," at 58 cents per cubic yard, 2,957.9 cubic yards, place measurement, class "A," at \$5.80 per cubic yard, hardpan, clay and boulders. Amount passed for payment, \$47,024.14. Work commenced July 2, completed October 8, 1929. Object of work: to enable heavy barges of Montreal Cottons Limited to reach Valleyfield wharf.
- White Head, N.B.*—Under contract No. 18058 with J. S. Gregory, dredge *Keta*. Quantity removed, 13,493 cubic yards scow measurement, at \$1.40 per cubic yard, class "B," sand, clay, gravel. Amount passed for payment, \$18,890.20. Work commenced July 13, completed November 1. Object of work: deepening a channel 50 feet wide leading to the public wharf and deepening basin in front of the same structure.
- Yamachiche River, P.Q.*—Under contract with the National Dock and Dredging Corporation, dredge *New Welland*. Quantity removed, 29,106 cubic yards, scow measurement, at 39 cents per cubic yard, class "B," clay. Amount passed for payment, \$11,351.34. Work commenced May 27, completed June 15. Object of work: deepening a turning basin.
- Yamaska River-Brouillard Ferry, P.Q.*—Under agreement with A. Laperrière. Quantity removed, 1,968 cubic yards, place measurement, at \$1 per cubic yard, class "B," clay, sand, gravel and boulders. Amount passed for payment, \$1,968. Work commenced May 22, completed May 31. Object of work: dredging the ferry crossing in Yamaska river.
- Yamaska River, P.Q.*—Under contract No. 15807 with A. Laperrière, dredge *W. Robidoux*. Quantity removed, 7,845 cubic yards, place measurement, at 30 cents per cubic yard, class "B," sand. Amount passed for payment, \$2,353.50. Work resumed June 3, completed June 25. Object of work: completion of contract work of cleaning channel from outlet of the river to the dam.
- Yamaska River, P.Q.*—Under contract with A. Laperrière, dredge *W. Robidoux No. 1* and *W. Robidoux No. 2*. Quantity removed, 22,159 cubic yards, place measurement, at 23 cents per cubic yard, class "B," sand, clay. Amount passed for payment, \$5,096.57. Work commenced July 13, completed August 30. Object of work: deepening channel from dam to Yamaska wharf.
- Yarmouth Harbour, N.S.*—Under contract No. 18043 with the Beacon Dredging Company. Quantity removed, 34,765.52 cubic yards, scow measurement, at 68 cents per cubic yard, plus 2 cents per cubic yard for overtow, class "B," mud, clay, stone. Amount passed for payment, \$24,335.88. Object of work: deepening boat basin at Evangeline wharf, 2,881.2 cubic yards, scow measurement, at Cold Storage wharf, 791.4 cubic yards, scow measurement, and at Fishermens' boat basin, 31,092.92 cubic yards, scow measurement.

## DRY DOCKS

## CHAMPLAIN DRY DOCK

The general works of operation and maintenance were carried on by the regular staff and the following works were executed: repairs were made to the brickwork, arches, baffle-plates, water-fronts, clinker breakers, etc., of the steam boilers; the fire grate bars were repaired and renewed in the mechanical stokers of the steam boilers; the asbestos covering of steam and water feed pipe lines and drums of boilers was repaired, and on the pipe lines and steam drums cleaned and painted; two of the armatures of electric motors of capstans were renewed, and repairs were made to the concrete flooring of the dock; the electric generators, steam turbines, engines, etc., were polished and painted, and the brickwork of the buildings painted; general repairs were made to the inside of the toilet building, and the gratings were renewed over the dock sumps; the capstans, bollards, lamp standards, and sluice gate valves in penstocks were scraped and painted, and the roof and covering of the penthouse over the boiler room repaired; alterations were made to the operating mechanism of tidal and ballast valves of the rolling caisson; the brickwork of the auxiliary boiler was repaired, and a brick chimney built for the boiler; and general repairs were made to the buildings and the steam electric hydraulic mechanical equipment.

The dock was occupied for 203 days by twenty-four ships of a total tonnage of 93,208 tons.

Four Canadian Government vessels occupied the dock for thirty-eight days during the season of navigation, and six during the winter.

## ESQUIMALT NEW DRY DOCK

The equipment was kept in good order throughout the year. The construction of an addition to the pump house to house the machine shop, and the installation of a motor generator set, which was commenced under contract in 1928, were completed. Other contract work, commenced last year, involved the completion of the construction of two residences for the dockmaster and chief operator, respectively, and an addition to the brick lavatory building. Additional pumps and motors for each of the two caissons were installed under contract, and a steam locomotive crane was also supplied under contract.

Thirty-three vessels were docked for repairs, cleaning, and painting, the total tonnage being 146,473 tons, with the dock occupied 126 days, excluding Sundays and holidays.

## ESQUIMALT OLD DRY DOCK

The dock being closed no vessels were accepted for docking, but on three occasions vessels were permitted to moor in the dock, for which service wharfage of one-half cent per ton per day was collected. Throughout the year the equipment, buildings, and grounds were kept clean and in good order.

## LORNE DRY DOCK

The general works of operation and maintenance were carried on by the regular staff, and the following works were executed; repairs were made to the steam and water feed pipe lines and their asbestos covering, and to the brickwork of the boilers; the woodwork of the inside of the power-house and the brickwork of the hose tower, oil store and forge building were painted; 400 feet of fence was repaired; the plank roadway of the coal shed was also repaired, and 1,900 square yards of macadam road was resurfaced with amiesite.

The dock was occupied for 182 days by fourteen vessels of a total tonnage of 27,442 tons.

Four Canadian Government vessels occupied the dock for fifty-four days during the season of navigation, and none during the winter.

## TELEGRAPH SYSTEMS OF THE DOMINION

As a matter of general interest, pursuant to the statement submitted last year the latest figures to hand showing the extent of telegraph lines in operation in the Dominion are given hereunder:—

Canada	Length of Lines in miles				Length of Conductors in Miles				Number of Offices
	Aerial	Under ground	Sub-marine	Total	Aerial	Under ground	Sub-marine	Total	
Canadian National Telegraphs.....	23,674	15	17	23,706	127,763	1,141	134	129,038	1,937
Government Telegraph Service.....	9,351½	.....	364½	9,715½ <sup>12</sup>	11,035	.....	364½	11,399½	796
Canadian Pacific Telegraphs.....	15,686	54½	106½	15,847	138,650	2,122	260	141,032	1,510

## CONSTRUCTION

The Government Telegraph System on March 31, 1930, comprised 9,351½ miles of pole line, 11,035 miles of wire, 364½ knots of cable and 796 offices.

During the year 159 $\frac{1}{4}$  miles of new lines were constructed as follows:—

	Miles	Miles
<i>Nova Scotia</i> —		
Cape Breton—		
Stirling Mines-Framboise.....	4 $\frac{3}{4}$	
Port Hawkesbury-Glendale.....	13	
Ottawa Brook-West Alba.....	2 $\frac{1}{2}$	
		20 $\frac{1}{4}$
<i>Quebec</i> —		
Magdalen Islands.....	1 $\frac{1}{2}$	
North Shore.....	2 $\frac{1}{2}$	
		4
<i>Alberta</i> —		
Peace River-Fort Vermilion Line.....	100	
		100
<i>British Columbia</i> —		
Vancouver Island—		
Taylor Bay-Mapledale Extension.....	$\frac{1}{2}$	
Shingle Bay Extension.....	6	
North Gabriola Island Line.....	20	
Indian Point Extension.....	4 $\frac{1}{2}$	
Stillwater Line.....	1	
		32
Northern British Columbia—		
Lilly Pad Ranch Extension.....	3	
		3
Total increase in pole mileage.....		159 $\frac{1}{4}$

The reduction in pole mileage due to sale of lines is as follows:—

	Miles
<i>British Columbia Mainland</i> —	
Golden-Invermere and Kamloops-Revelstoke Lines.....	656

Making the pole mileage for 1929-30 as follows:—

Mileage 1928-29.....	9,848
Plus new construction.....	159 $\frac{1}{4}$
	10,007 $\frac{1}{4}$
Less sales.....	656
On March 31, 1930.....	9,351 $\frac{1}{4}$

The difference in wire mileage submitted in 1928-29 and 1929-30 is accounted for by additions due to new construction and deductions due to sale and abandonments, as follows:

	Miles	Miles
Wire mileage 1928-29.....		12,085 $\frac{3}{4}$
Plus new construction:		
<i>Nova Scotia</i> —		
Cape Breton.....		39
<i>Quebec</i> —		
Magdalen Islands.....	12	
North Shore.....	5	
		17
<i>Alberta</i> —		
Peace River-Fort Vermilion.....		100
<i>British Columbia</i> —		
Vancouver Island—		
Taylor Bay Extension.....	$\frac{1}{2}$	
Shingle Bay Extension.....	6	
North Gabriola Line.....	20	
Indian Point Line.....	4 $\frac{1}{2}$	
Stillwater Metallic Circuit.....	19	
		50
Northern British Columbia—		
Lytton-Lillooet Metallic Circuit.....	47

NOTE.—In addition to the above an Excise Tax of \$1,844.24 was collected and paid over to the Department of National Revenue.

## MAINTENANCE

The cost of staff and maintenance of the Government Telegraph and Telephone Service in the Maritime Provinces, Quebec and Lower St. Lawrence during the fiscal year 1929-30 was \$224,465.38.

This is an increase of \$13,344.41 compared with the previous year, and is made up as follows:—

Bay of Fundy.....	\$ 76 74
Cape Breton.....	2,468 62
Prince Edward Island and Mainland.....	64 57
North Shore St. Lawrence East.....	8,095 49
North Shore St. Lawrence West.....	5,725 66
Quebec County.....	768 49
Grosse Isle-Orleans Island.....	388 51
Magdalen Islands.....	2,838 22
Maritime Provinces and Gulf Generally.....	1,716 04

Net Decrease.....	<hr/> \$43,751 55

The decrease in the cost of staff and maintenance of the whole System was \$30,407.14 made up as follows:—

Decrease West of Quebec.....	\$43,751 55
Increase Quebec and East.....	13,344 41
	<hr/>
Decrease.....	<hr/> \$30,407 14

The decrease of \$8,016.87 in the total expenditure is made up as follows:—

Decrease in repairs Quebec and East.....	\$ 6,373 44
Decrease in repairs West of Quebec.....	30,732 05
	<hr/>
Total decrease in repairs.....	<hr/> \$37,105 49
Total decrease in staff and maintenance.....	30,407 14
	<hr/>
	<hr/> \$67,512 63
Less increase in cost of construction.....	59,495 76
	<hr/>
Total decrease in expenditure.....	<hr/> \$ 8,016 87

## REVENUE

The operating revenue for 1929-30 as compared with that of the preceding year shows a decrease of \$19,066.33, which is offset by a reduction in cost of operation of \$30,407.14. The number of offices operated at the close of the year was 796, which is a decrease of 99 compared with the preceding year. The number of messages shows a decrease of 41,518, which was mainly due to the closing of all offices on the British Columbia Mainland Division through the sale of lines to the British Columbia Telephone Company.

## SYSTEMS

## NEWFOUNDLAND

This line was completed in 1883, and connects Port au Basque with Cape Ray, a distance of 14 miles. Its operation is carried on as heretofore, under an agreement with the Anglo-American Cable Company, the Dominion Government paying a small yearly subsidy. The line was constructed for the purpose of connecting the lighthouse at Cape Ray with the Meteorological and Signal Services as an aid to shipping.

## CAPE BRETON

Owing to the demand for increased telephone facilities in Inverness and Victoria counties, and the consequent overloading of lines, it was found advisable to establish a telephone exchange at South Lake Ainslie. In addition to the above there were  $20\frac{1}{4}$  miles of new construction to provide service to other localities. This work included the following:—

Stirling Mines to Framboise.....	4 $\frac{3}{4}$ miles
Port Hawkesbury to Glendale.....	13 "
Ottawa Brook to West Alba.....	2 $\frac{1}{2}$ "

The work of repoling and moving lines, to meet the new highway requirements, was completed on 116 miles of line, and included the following sections: The Boularderie Island line; Grand River to Enon; Washabuck Bridge to Washabuck Centre; North East Margaree to Big Intervale; Cape North, Ingonish Ferry to Smoky Mountain; Margaree Forks to East Margaree; and South West Margaree and in the vicinity of Strathlorne.

The telephone service was augmented by the addition of fifty-five new telephones and five telephones were removed, resulting in a net increase for the year of fifty telephone subscribers.

The revenue for the past year showed an increase of \$878.90 over that of the preceding year. This increase was due principally to the mine activities in the Framboise and Eastern Harbour areas and to the fishing industry adjacent to offices in Victoria county. The tourist traffic in Cape Breton was also a contributor to telegraph and telephone revenue. The cost of operation for 1929-30 as compared with that of the previous year shows an increase of \$2,468.72.

## BAY OF FUNDY

The telegraph and telephone lines of this system, indispensable to the fishing industry, continued to give satisfactory service during the year. This system, the principal lines of which are on Grand Manan Island, also gives service to the adjacent islands and lighthouses. The cost of operation was \$4,353.11 which is \$76.74 greater than the preceding year. There was a slight increase in the revenue as well as an increase in the messages handled. The number of offices remains unchanged.

## CHATHAM-ESCUMINAC

A satisfactory service was maintained during the year. The cost of operation for 1929-30 compared with that of the previous year shows a decrease of \$65.13. The revenue also decreased by \$126.76. This system extends for a distance of 85 miles adjacent to the northeast coast of New Brunswick in the vicinity of Chatham.

## MAGDALEN ISLANDS

The telephone lines on these islands gave satisfactory service during the year. The work of changing this system from grounded to metallic circuits which was begun last year on Amherst Island was continued this year on Grindstone Island and House Harbour. To provide for the erecting of cross-arms to

accommodate the increased number of wires, the pole line in the above areas was completely reconstructed, 675 new poles being placed. The number of telephone subscribers, which last year was 182, has increased to 195, divided among the three exchanges as follows: Amherst Island, 50; Grosse Isle, 41; and Grindstone West, 104. The cost of operation of this system for the year was \$2,838.22 more than the previous year. There was an increase in revenue of \$122.20.

#### ANTICOSTI ISLAND

The telegraph service on this island, which since 1924 has been under lease to the Administration of Anticosti, is now operated by the Anticosti Corporation, the present owners of the island. The corporation has taken over the lease of the telegraph service subject to its original terms and conditions. The telegraph service by way of the 45-mile cable from Gaspé to Jupiter River has been very satisfactory throughout the year.

#### NORTH SHORE ST. LAWRENCE EAST

The pulpwood industry from which this system derives a large portion of its traffic continued to suffer from the slump which was evidenced in the preceding year. The salmon fishing carried on by the several clubs which have leases on the most important streams along the north shore is attracting a yearly increasing number of sportsmen, and in consequence the augmented revenue from this service is quite perceptible. The main line from Murray Bay to Red Bay, Labrador, a distance of 1,014 miles, continues to be the sole means of wire communication over this long stretch of territory. The cost of operation for 1929-30, as compared with the previous year, shows an increase of \$8,095.49. The number of messages transmitted shows a decrease of 2,643, but notwithstanding this decrease in volume the revenue shows an increase of \$3,268.27 for the year.

#### NORTH SHORE ST. LAWRENCE WEST AND CHICOUTIMI DISTRICT

This district is made up of that portion of the main line between Murray Bay and Bersimis river, a distance of approximately 150 miles, and the lines on both sides of the Saguenay river between Tadoussac and Chicoutimi, aggregating 162 miles. During the past year the Provincial Government carried out a plan of highway construction between Murray Bay and Portneuf river, a distance of approximately 100 miles, and between L'Anse St. Jean and Grande Baie, a further distance of 40 miles, which necessitated the rebuilding of lines over the greater portion of these sections. This work, begun in May, was continued throughout the season until the end of October, the lines thus rebuilt or moved to the side of the new highway showing a marked degree of improvement. The number of offices was increased by two and the revenue shows an increase of \$184.33.

#### ISLAND OF ORLEANS AND QUARANTINE SYSTEM

During the year these lines gave a satisfactory service to the Island of Orleans, Grosse Isle, and Crane Island. These Islands are situated in the St. Lawrence river about 6 miles below the city of Quebec, and extend 45 miles down the river. The islands are connected by a system of land lines and cables over which the telegraph and telephone traffic of the residents is inexpensively and promptly handled. The cost of operation for 1929-30, as compared with that of the previous year, shows an increase of \$388.51. There was a decrease of 385 in the number of messages transmitted, but nevertheless, an increase of \$150.23 was shown in the revenue.

## QUEBEC COUNTY

The usual satisfactory service was given during the year by these telephone lines. Apart from a very valuable toll line service to the public, there are seventy-four telephone subscribers served by these lines. The cost of operation for 1929-30 as compared with the previous year was increased by \$768.49, while the revenue showed an increase of \$108.37.

## TIMISKAMING

La Compagnie du Téléphone du Nord, Limitée, continues to operate these lines under lease.

## PELEE ISLAND, ONTARIO

This island, situated in lake Erie, 17 miles from the mainland, is served by two telephone cables. These cables terminate near Scudder dock and are connected with the island telephone exchange at the west dock by a six-mile stretch of land line. By this combined service, and through the Bell Telephone Company's exchanges at Kingsville and Leamington, a local and long distance telephone service is provided for the residents of this very productive island. The cost of operation for 1929-30 as compared with the previous year shows an increase of \$511.59.

## SASKATCHEWAN AND ALBERTA

The lines of this system in the above provinces were maintained in a very satisfactory condition during the past year. In Saskatchewan the principal work executed was the recutting and improving of the right of way between Island Hill and Isle la Crosse, a distance of approximately 100 miles. In Alberta the one important piece of construction was confined to the Peace River section where the construction of the Peace River-Fort Vermilion line is being carried out. This line when completed will be 265 miles in length. Up to the end of the building season 100 miles of pole line was completed and during the winter an additional 60 miles of right of way cleared. Bridges were also built over several of the larger creeks. Up to the present time one new office has been opened on this line. This is located at Notikewin, 65 miles north of the town of Peace River. At this latter place a new combined dwelling and office building was constructed and is a great convenience to the public at large. The volume of business during the past year was most satisfactory showing an increase of \$4,859.54 over the previous year, due to an increase of 7,537 in the number of messages transmitted. The cost of operation for 1929-30, as compared with the previous year, shows a decrease of \$1,051.13.

## BRITISH COLUMBIA MAINLAND

All the Government-owned telephone lines in this division were transferred by sale to the British Columbia Telephone Company at the end of October last. The lines sold as above comprised 656 miles situated on the several branches as follows:—

Kamloops to Barriere Section North Thompson.....	93	miles
Kamloops-Heffley Lake Section Adams Lake Section and Knouffe Lake...	74	"
Blucher Hall-Barriere Junction.....	7	"
Kamloops-Fruitlands Line North Thompson.....	15½	"
Kamloops-Pritchard Line.....	28	"
Kamloops to Revelstoke via Monte Creek Chase and Sicamous.....	241½	"
Golden Invermere Fort Steele Section.....	197	"

The revenue derived from these lines for the seven months of the fiscal year previous to their sale was \$14,603.39, whereas the cost of maintenance for the same period was \$25,344.90.

## VANCOUVER ISLAND DISTRICT

The lines in this district were maintained in a satisfactory working condition. General repairs and improvements were carried out on all the sections with the result that except during heavy gales there were no serious interruptions. The wire mileage of this district was increased to the extent of 50 miles by reason of the following construction:—

Taylor Bay-Mapledale extension.....	6	$\frac{1}{2}$ miles
Shingle Bay.....	6	"
Indian Point.....	4 $\frac{1}{2}$	"
North Gabriola Island line.....	20	"
Powell River-Stillwater metallic circuit.....	19	"

The cost of operation for 1929-30, as compared with the preceding year, shows an increase of \$1,424.63. The revenue was increased by \$2,813.30, due in part to the increase of 7,168 in the number of messages sent.

## YUKON SYSTEM AND BRANCHES

The main line and branches composing the Yukon Telegraph system, together with the lines now known as the Northern British Columbia Division, were operated during the year in a satisfactory manner. Delays in repairing interruptions to the circuit were not very heavy, except on one or two occasions in the latter part of the year. New construction was confined to the Lillooet-Lytton Branch where for a distance of approximately 50 miles the line was practically rebuilt and a metallic telephone circuit substituted for the former grounded one. This has improved the local service between the two points named above. Improvements of a general nature were carried out on those sections requiring such attention, and in many cases the line was moved to conform with the requirements of new highway construction. The cost of operation for 1929-30, as compared with the preceding year, shows a decrease of \$9,407.68. The revenue for the year showed a decrease of \$1,867.37, whereas the number of messages transmitted was increased by 2,502.

## C.G.S. "TYRIAN"

The following covers the operations of the cableship *Tyrian* during the fiscal year 1929-30, together with a list of repairs effected:—

1929	
April 1.....	At Halifax.
3.....	Bunkered and left for Cape Negro Island.
4.....	Repaired Cape Negro Island cable, went to Shelburne for orders.
5.....	Docked at Halifax.
May 2 and 3.....	In drydock for cleaning and painting.
4 to 6.....	Coaling at pier 9.
8.....	Left Halifax for Caribou Island.
9.....	At Pictou.
10 and 11.....	Repairing Caribou-Wood Island cable.
12.....	At Pictou adjusting compass.
13.....	At Charlottetown for water.
14.....	Left Charlottetown for Tadoussac.
16 to 19.....	Repairing Tadoussac-St. Catherines cables and laying new one.
20.....	Left Tadoussac for Quebec.
21.....	Docked at Quebec.
22 and 23.....	Repairing L'Ange Gardienne cable.
24 to 27.....	Repairing St. Francois-Ile aux Reaux cables.
28.....	Repairing Ile aux Reaux-Grosse Ile cables.
29.....	Working on Marguerite Island, Crane Island and Ile aux Reaux-Grosse Ile cables.
30.....	Left for Quebec in evening.
31.....	At Quebec.
June 1 to 5.....	At Quebec.
6.....	Adjusting compass.
7.....	At Quebec.
8.....	Adjusting compass.
9.....	Working on Grosse Ile, Ile aux Reaux, Cliff Island and Marguerite Island cables.
10.....	Repaired Marguerite Island-Crane Island cable.

C.G.S. "TYRIAN"—*Concluded*

1929	
June	11..... Docked at Quebec.
	13..... Left Quebec for Bersimis.
	15..... Repaired Bersimis river cables.
	16..... Left Bersimis for Quebec.
	17..... Docked at Quebec.
	24 and 25..... Loading poles at Quebec.
	27 and 28..... Loading poles at Quebec, left Quebec for Bersimis.
	30..... Landing material at Bersimis.
July	1 to 5..... Landing poles in Outardes Bay district.
	6..... Left Bersimis for Tadoussac.
	7..... Taking aboard material at Mille Vaches.
	9..... Arrived at Tadoussac and repaired Tadoussac-St. Catherines cable.
	10..... Left Tadoussac for Quebec.
	11 and 12..... At Quebec.
	13 to 17..... Taking aboard material at Quebec.
	19 and 20..... Taking aboard poles at Quebec. Left for Tadoussac.
	21..... Landing poles at Cape L'Aigle.
	22..... Landing poles and material at St. Simeon and Tadoussac.
	23..... Landing poles at L'Escoumains and Petite Bergeronnes.
	24..... Landing poles at Mille Vaches.
	25..... Went to Rimouski, took aboard material and went to Bersimis.
	26..... Landed material at Bersimis and left for South Nelson, N.B.
	27..... Arrived at Newcastle, N.B.
	28..... Docked at South Nelson, N.B.
	29 and 30..... Taking aboard poles at South Nelson.
	31..... At Newcastle awaiting foreman for Magdalen Islands.
Aug.	1..... Left Newcastle for Magdalen Islands.
	2..... Arrived at Amherst Island.
	3..... Landing poles at Grindstone Island.
	4..... Anchored off Amherst, high winds.
	5 and 6..... Surveying and staking out pole line at Grindstone.
	7..... Repairing House Harbour cable.
	8 and 9..... Working on Brion-Grosse Isle cable.
	10..... Overhauling and repairing Brion cable aboard ship.
	11..... Relaying Brion Island cable.
	12..... Anchored off Amherst, high winds.

## THE NATIONAL GALLERY OF CANADA

Eric Brown, Director

During the year which closed March 31, 1930, the work of the National Gallery maintained steady progress in all its phases. Important purchases were made in all departments, but especially in the old master section, which is each year growing more and more significant. Temporary exhibitions held by the National Gallery in Ottawa and throughout the country during this period have been the most important in the history of the institution. Attention is particularly directed to the exhibition of old masters very kindly lent by The National Loan Collection Trust of Great Britain. The exhibition was opened at the National Gallery in Ottawa on October 18, 1929, by His Excellency, the Governor General, in the presence of the Right Honourable Ramsay MacDonald, Prime Minister of Great Britain, and the Right Honourable W. L. Mackenzie King, and a large gathering of distinguished guests. It is hoped that this exhibition will prove to be the first of a series of loan collections drawn from the great art treasures of the Mother Country. Other notable collections circulated by the National Gallery, in addition to exhibitions drawn from the national collection in Ottawa, were the exhibition of Modern Woodcuts and Wood Engravings, Modern British Etching exhibition, Austrian Woodcuts and Colour Prints and the Czecho-Slovakian Print exhibition. These exhibitions are of the greatest value in spreading a knowledge of art throughout the country, and frequently are the only means available to some communities of studying current art production of the highest standard.

Loan exhibitions and new purchases are listed below, but special attention may be appropriately directed to some of the more outstanding of the latter.

It is a great and unusual pleasure to be able to report the gift to the National Gallery of two valuable and significant paintings. The heirs of the late Dr. Francis J. Shepherd, M.D., C.M., LL.D., F.R.C.S., a member of the Board of Trustees from 1909 to 1923 and Chairman from 1924 to 1929, generously presented a fine example of contemporary French painting, "La Seine à Herqueville" by Gustav Loiseau, from Dr. Shepherd's collection.

During the year a rare and very valuable example of 15th Century French painting was submitted to the Board and approved, but owing to lack of funds, could not be purchased. Mr. H. S. Southam, Chairman of the Board of Trustees, very generously purchased the picture and presented it to the National Gallery. The picture, "Portrait of an Ecclesiastic" attributed to Jan Prevost (14.-1529), is a superb example of the finest work of the period, and constitutes an extremely valuable addition to the National collection.

In the great "Christ with the Cross" by Peter Paul Rubens (1577-1640) the National Gallery has acquired a unique example of the artist's early work. The picture was painted in Madrid about 1604, but for some reason was not left there by the artist. It was rediscovered in Belgium, having been lost for over two hundred years. Dr. Bode, late Director of The Berlin National Gallery, wrote of this painting:—

"It is certainly by Rubens and the whole picture is by his own hand. It is better drawn and not so exaggerated as the twelve Apostles now in the Prado Gallery. The high execution indicates the early time of the master and therefore it is not impossible that it is the picture painted for the Duke of Lerma."

This opinion is confirmed by foremost British experts.

The portrait of the Countess of Meath by Sir Peter Lely (1618-1680) is regarded as one of the artist's finest works, and comparable to the best of that fine series of portraits of court beauties now at Hampton Court.

"Christ and the Woman Taken in Adultery" by Lucas Cranach the elder (1472-1553), is a vivid and brilliant representation of the Bible story seen through mediaeval eyes. Fine examples of the German school of this period are rare, and the National Gallery picture is one of the most notable which has appeared in recent years. Taken together with the exceptionally fine portrait by Bartel Beham, acquired last year, it gives the early German school a strong foundation in the National Gallery.

The acquisition of contemporary Canadian works of art were numerous and of a high order of merit. The annual exhibition of Canadian art held at the National Gallery in January and February, from which these works are for the most part chosen, continues to grow in importance and in standard of the works displayed. The 1930 exhibition was thoroughly representative of the best work done in Canada from coast to coast, and was recognized by critics as one of the most significant exhibitions of Canadian art held anywhere.

The following are the principal accessions made during the year:—

#### OIL PAINTINGS

Portrait of Elizabeth, Third Countess of Meath .....	Sir Peter Lely (1618-1680)
The Vegetable Market.....	Giovanni Antonio Canaletto (1697-1768)
Christ and the Woman Taken in Adultery...	Lucas Cranach (1472-1553)
Judith with the Head of Holofernes.....	Jan Van Scorel (1495-1562)
Christ with the Cross.....	Peter Paul Rubens (1577-1640)
Three Men Talking.....	Guiseppi Baldrihi (1723-1802)
Scene on a Dutch River.....	Solomon Van Ruisdael (1600-1670)
St. Jerome .....	Bartholommeo Montagna (1460-1523)
Winter Moonrise .....	Archibald Browne, R.C.A.
Girl on a Hill.....	Prudence Heward
Marie et Minou.....	Mabel I. Lockerby
Melting Snow .....	H. Mabel May, A.R.C.A.
Williamson's Garage .....	L. L. Fitzgerald
Portrait Sketch of Tom Thompson.....	H. B. Jackson
Nude In Landscape.....	Edwin H. Holgate
Self Portrait .....	Lilias T. Newton, A.R.C.A.
Rosspport, Lake Superior.....	Yvonne McKague
Single Peony .....	A. F. W. Hayward
Afternoon in the Coulee.....	James Henderson
North Shore, Lake Superior.....	Lawren Harris
Rollande .....	Prudence Heward

#### WATER COLOURS

Landscape at Hochelaga.....	Marc A. Fortin
-----------------------------	----------------

#### SCULPTURE

Le Repas de Veau (bronze).....	A. Laliberte, R.C.A.
Derelicts (bronze) .....	Frances Loring, A.R.C.A.
Thunder Cloud (Indian Head) (bronze)....	Emanuel Hahn, A.R.C.A.
Head of a Canadian Soldier (bronze).....	Alfred Howell

#### DIPLOMA WORKS

Melbourne Notch (oil).....	F. S. Coburn, R.C.A.
Study for a Library (charcoal).....	J. O. Marchand, R.C.A.
Illuminated Page on Vellum.....	Alex. Scott Carter, R.C.A.

#### GIFTS

Le Seine à Herqueville (oil).....	Gustav Loiseau
(Presented by the Estate of the late Dr. Francis J. Shepherd).	
Portrait of an Ecclesiastic (oil).....	Attributed to Jan Prevost (14..-1529)
(Presented by Mr. H. S. Southam, Ottawa)

(Presented by the artist)	
Autumn (oil) .....	W. J. Wood
(Presented by the artist)	

## PRINTS

A number of modern prints consisting of etchings, engravings and woodcuts by both British and foreign artists were acquired by the Print Department, among the most important being prints by Eric Gill, Oliver Hall, Clare Leighton, Rockwell Kent, B. J. Nordfelt, John Sloane, Hans Frank, Leo Frank and Norbertine von Bresslern-Roth.

Loan exhibitions were held at the following centres:—

Montreal, P.Q. ....	Ecole des Beaux Arts
Fort William, Ont. ....	The Public Library (17 pictures)
Guelph, Ont. ....	Ontario Agricultural College (17 pictures)
Kingston, Ont. ....	The Douglas Library, Queen's University (30 colour prints)
London, Ont. ....	Western Fair (22 pictures)
Orillia, Ont. ....	Woman's Canadian Club (12 pictures)
Ottawa, Ont. ....	{ Dominion Archives (9 pictures)
	{ Parliament Buildings (38 pictures, 6 prints, 25 Medici prints)
St. Thomas Ont. ....	Alma College (20 pictures)
Stratford, Ont. ....	The Public Library (8 pictures)
Walkerville, Ont. ....	Willistead Library (16 pictures)
Regina, Sask. ....	Regina Exhibition (41 pictures)
Calgary, Alta. ....	Woman's Canadian Club (17 pictures)
Edmonton, Alta. ....	Edmonton Museum of Art (24 pictures)
Washington, D.C. ....	The Canadian Legation (10 pictures)
Geneva, Switzerland ....	The Canadian Legation (7 pictures)
Paris, France ....	The Canadian Legation (13 pictures)
Tokyo, Japan ....	The Canadian Legation (14 pictures)
London, England ....	The Italian Exhibition, Burlington House (3 pictures)

# REPORT OF THE DEPUTY MINISTER OF RAILWAYS AND CANALS FOR THE FISCAL YEAR ENDED MARCH 31, 1930

To the Hon. R. J. MANION,  
Minister of Railways and Canals.

SIR,—I have the honour to submit herewith the fifty-first annual report of the Department of Railways and Canals. The sections relating to railway operation have to do with the calendar year, while those dealing with departmental and canal activities and financing are for the federal fiscal year ended March 31, 1930. As usual, the presentation includes the annual report of the Canadian National Railways, as well as a report of the operations of the former Canadian Government lines, separately shown. The financial activities of the department are dealt with for the year, and cumulatively, in the accountant's report, while the report of the chief engineer deals with the construction, operation and maintenance of the canals, and with the construction of the Hudson Bay railway and the harbour development at Churchill. **Incidental to the report** are the customary statements with reference to the Government Employees' Compensation Act, which the department administers, and a list of the subsidies paid by the federal Government to Canadian railways in aid of construction, a policy discontinued during the war.

It is not intended in this introductory summary to traverse ground so fully covered by the Canadian National Railways report which will be found in full elsewhere in this volume. There are, however, certain aspects of the railway situation, mainly financial, to which it has been the practice of the deputy minister of the department to refer in his annual presentation, the object being, as far as possible, to provide a statement of railway financing in such form as to make it possible to make comparisons over a period of years, and the usual practice will be followed in this respect.

As will be seen by the published balance sheet, the long-term debt of Canadian National Railways, as of December 31, 1929, was \$2,431,244,154.89, an increase of \$163,138,640.04 for the year. Of the long-term debt at that date \$1,122,559,492.74 was funded debt, unmatured, due the public, and \$1,308,684,662.15 what is known as Dominion of Canada account, consisting of loans, interest accrued and unpaid, and appropriations account, Canadian Government Railways. The increase for the year in the debt to the public investors appears as \$144,670,459.80, and the net increase in Dominion of Canada account, \$18,468,180.24. The accrual of interest on government loans amounted for the year to \$32,064,132.02 and the shrinkage to a net increase of eighteen millions odd is due to the fact that the corresponding 1928 statement of loans contained temporary advances by the Minister of Finance which, during 1929, were funded and found their way from Dominion of Canada account to funded debt due the public. In the 1929 balance sheet the temporary advances by the Minister of Finance were not shown under government loans, as in the 1928 balance sheet, but were shown separately under current liabilities. These amounted to December 31, 1929, to \$32,601,600, and are in addition to the funded debt of the year. This temporary financing was, at the end of the year, being held for a favourable market for funding, and to the extent that the holding over relieved the 1929 funded debt situation it would adversely affect the 1930 presentation.

Included in the Dominion of Canada account, in the balance sheet presentation of Canadian National liabilities, are the following items:—

Loans from Dominion of Canada.....	\$ 601,446,082 13
Interest on above accrued but unpaid.....	290,088,439 43
Appropriations account, Canadian Government Railways.....	417,150,140 59
Total.....	\$ 1,308,684,662 15

The appropriations account represents capital and other expenditures connected with the original Canadian Government Railways, less certain reductions caused by the transfer of Hudson Bay Railway account, which during the reconstruction and extension period has been a direct charge on the Department of Railways and Canals. There have also been some reductions in recent years by reason of the transfer of property valued at \$12,830,122 to the Harbour Commission at Halifax, and of property valued at \$647,383 to the Harbour Commission at Saint John. The appropriations item appears as a liability to offset a corresponding entry carried in investment account, and from the standpoint of a discussion of the debt of the Canadian National system the item is not relevant. Since reorganization it no longer reflects current capital expenditure, though it still includes minor items of outlay connected with Exchequer Court awards, Intercolonial Railway pensions, etc.

The item of interest accrued and unpaid, \$290,088,439.43, represents a charge on the books of the railway which has no counterpart in the public accounts of the Dominion, where interest is not accrued on these loans, which are listed in the Dominion ledger as non-active. It is an anomalous situation to which attention has been drawn on previous occasions. The anomaly lies in the fact that the interest is accrued on loans and advances against railway properties, formerly privately owned, but now owned by the Government, while no interest is accrued either by the railway or the Dominion on appropriations which have gone into the original Government Railways.

The item of loans, \$601,446,082, includes \$239,850,198 which has been used to meet operating and income deficits, and is not reflected, any more than is the accumulated interest charge previously referred to, in the investment side of the ledger. The final disposition of these losses and unpaid interest charges awaits consideration when revision of the general financial structure is undertaken.

The loan item, which appears in the railway balance sheet as \$601,446,082, appears in Public Accounts as \$614,451,572. The difference is accounted for by the fact that the ten millions provided by the Government for the purchase of Canadian National stock is treated by the Department of Finance as a loan, and by the railways as a stock purchase transaction. The remainder of the difference, approximately three millions, consists of book-keeping outstandings due to the closing of the railway books on December 31, and the public accounts on March 31 each year. In such cases absolute agreement between the published figures of the railway balance sheet and public accounts is out of the question.

Subsidies in aid of railways are of long standing in Canada though none has been voted in recent years. In addition to financial and land subsidies cash loans were made to the Canadian Pacific Railway in the early days. During the era of railway expansion which set in early in the present century with the extension across the continent of the Canadian Northern and Grand Trunk Pacific railways the guaranteeing of railway bonds commenced, and, a little later, the policy of cash loans was again resorted to. In the appended statement a list of the cash loans and of the guarantees is given. The cash loan figure, \$571,290,735.04, differs from the \$601,446,082 figure already referred to by reason of the difference in railway and fiscal years, but principally by reason of the fact that \$33,048,000 appearing in the set-up of loans in both the railway and Dominion accounts was not utilized for ordinary loan purposes, but for the buying in, many years ago, of Grand Trunk Pacific debentures to avoid the

necessity of the Government having to continue to implement them to par as they were being placed on the market.

The loans as shown in the first column are the net yearly cash loans as voted, less refunding. It is the historical year by year presentation. The second column indicates the loans still outstanding against specific authorities in the books of the railway and of the Dominion. The variations are due to inter-corporate transactions and to transfers due to the holding of the Grand Trunk responsible for its guarantees with respect to issues by the Grand Trunk Pacific. As will be seen, these internal adjustments of the loan situation do not affect the total. It will be noted that guaranteeing fell off during the war years, though during that period the loans gradually augmented, reaching the critical stage immediately following the war and the taking over of railway properties by the Government. The provision of almost four hundred millions in four years of the post-war period, in addition to guarantees amounting to \$128,000,000, is eloquent of the bankrupt condition of the former privately-owned lines when the Government was obliged to come to their rescue:

In addition to the above guarantees, the Government, in acquiring the Grand Trunk, guaranteed in perpetuity the interest on the following issues:—

Grand Trunk 4% guaranteed stock (Perpetual).....	\$ 60,833,333 33
Grand Trunk 5% perpetual debenture stock.....	20,782,491 67
Great Western 5% perpetual debenture stock.....	13,252,322 67
Grand Trunk 4% perpetual debenture stock.....	119,839,014 33
Northern Railway of Canada 4% perpetual debenture stock.....	1,499,979 67
	<u>\$ 216,207,141 67</u>

The following statement of long-term debt covers the period 1919 to 1929, inclusive. It includes appropriations account, Canadian Government Railways,

Government loans to former privately-owned lines and to Canadian National Railways, also funded debt due public investors, and debenture stocks of the former Canadian Northern system, Grand Trunk and Grand Trunk Pacific, but does not include capital stocks amounting to \$270,223,249, of which \$265,628,339 is owned by the Dominion Government and \$4,594,910 by others. These capital stocks include former Grand Trunk common and preferred shares adjudged valueless by the Grand Trunk board of arbitration and Canadian Northern common stock of par value of \$100,000,000 for which \$10,000,000 was paid on award of an arbitration board:—

Calendar Year	Appropriations, Canadian Government Railways	Government Loans outstanding	Accumulated accrued interest	Total Dominion of Canada account	Annual increase

Of interest also in any consideration of Canadian National Railway finances and the Government's connection therewith is the following statement of fixed or interest charges covering the same period 1919 to 1929, inclusive:—

#### CANADIAN NATIONAL RAILWAYS—INTEREST CHARGES

Year	Amount Accrued during Year			Increase during Year		
	On Government Loans	On Funded Debt	Total	On Government Loans	On Funded Debt	Total Increase
	\$	\$	\$	\$	\$	\$
1919.....	9,596,581	28,599,687	38,196,268	3,517,851	669,715	4,187,566
1920.....	14,346,832	31,055,318	45,402,150	4,750,251	2,455,631	7,205,882
1921.....	20,966,782	34,476,014	55,442,796	6,619,950	3,420,696	10,040,646
1922.....	24,912,876	34,652,324	59,565,200	3,946,094	176,310	4,122,404
1923.....	30,157,944	35,041,380	65,199,324	5,245,068	389,056	5,634,124
1924.....	31,271,043	38,361,704	69,632,747	1,113,099	3,320,324	4,433,423
1925.....	31,450,382	40,438,235	71,888,617	179,339	2,076,531	2,255,870
1926.....	32,090,454	39,197,233	71,287,687	640,072	-1,241,002	-600,930
1927.....	32,505,234	40,526,096	73,031,330	414,780	1,328,863	1,743,643
1928.....	32,507,337	41,810,880	74,318,217	2,103	1,284,784	1,286,887
1929.....	32,690,545	45,503,980	78,194,525	183,208	3,693,100	3,876,308

The above statement does not include interest on bank borrowings for current financing which is later funded. The interest on unfunded debt in 1929 was \$2,701,331.37, and in 1928, \$1,998,138.32.

The following summarized statement covers loans made to railways to March 31, 1923 (during which fiscal year reorganization of the management took place), and from April 1, 1923, to December 31, 1929, under the reorganized management. It covers, also, guaranteed bond issues from the year of railway difficulty, 1919, to March 31, 1923, and from April 1, 1923, to December 31, 1929, under the reorganized management. It does not include guaranteed issues prior to 1919 made to private companies and largely applied on construction account. An exact distribution of those prior issues is not possible at this time and to that extent, about two hundred and seven millions, the distribution of proceeds of guarantees is incomplete. As already stated, however, the proceeds of these prior guarantees were largely utilized on capital expenditure:—

## DOMINION LOANS

A. To March 31, 1923.....	\$ 513,808,082 13	
B. April 1, to December 31, 1929.....	57,482,652 91	
Total loans outstanding.....		\$ 571,290,735 04

## OTHER INDEBTEDNESS TREATED AS LOANS

A. G.T.P. debentures held by Government.....	\$ 33,048,000 00	
B. Temporary loans refunded in 1930.....	7,171,181 67	
C. Outstanding mortgages on vessels purchased.....	40,000 00	
		40,259,181 67

## GUARANTEED BONDS ISSUED

A. April 1, 1919, to March 31, 1923.....	\$ 128,109,027 00	
B. April 1, 1923, to December 31, 1929.....	408,427,098 20	
		\$ 536,536,125 20
Total.....		\$1,148,086,041 91

## DISTRIBUTION OF FOREGOING LOANS AND PROCEEDS OF BOND ISSUES

	Dominion loans	Other indebtedness treated as loans	Guaranteed bonds issued
	\$	\$	\$
Income deficits.....	239,850,198 45		35,820,702 54
Redemption of debt.....	113,290,426 91	2,515,692 08	233,279,461 39
Acquisition of securities.....		4,655,489 59	8,716,015 23
Capital expenditure including purchase of railways....	189,621,116 02	33,088,000 00	229,351,060 69
Working capital.....	28,528,993 66		9,152,963 62
Discounts, etc.....			10,990,859 31
Amount chargeable to 1930 requirements.....			9,225,062 42
Totals.....	571,290,735 04	40,259,181 67	536,536,125 20

From the first of the above two statements it will be seen that, since reorganization, the cash requirements of the Canadian National Railways, other than that supplied from its own resources, have, from April 1, 1923, to December 31, 1929, the period since reorganization, been \$473,080,932.78, of which \$57,482,652.91 has been provided by loans from the Government; \$7,171,181.67 by temporary loans from the same source which have been repaid in 1930 from

proceeds of 1930 guaranteed issues, and \$408,427,098.20 by the issue of guaranteed bonds. These requirements were authorized either by annual budgets or by special legislation, as follows:—

A. Annual budgets over period.....	\$ 280,662,530 29
B. Special Legislation (Expenditures)—	
1. Various branch lines construction.....	40,391,245 93
2. Construction of Toronto terminals and viaduct.....	14,077,500 00
3. Construction of Montreal terminals.....	7,300,000 00
4. Acquisition of railways.....	10,263,923 69
5. Acquisition (with Canadian Pacific Railway) of Northern Alberta Railways.....	3,409,254 97
6. Funded debt retirements.....	95,102,098 20
7. Purchase of equipment.....	22,500,000 00
	<u>\$ 473,706,553 08</u>
Less bank interest on proceeds of bond issues at deposit.....	625,620 30
Total expenditures provided through cash loans and guarantees	<u>\$ 473,080,932 78</u>

Enough information has been included in the foregoing presentation of railway finances to indicate the nature and extent of the heavy requirements of the railways now comprising the Canadian National system, the sources from which those requirements have been drawn, other than from the railways' own resources, and the extent to which the financing has been by loans from the Government and by moneys invested by the general public. On the whole, probably a clearer and, to the layman, a more understandable picture is presented by the following set-up of loans to railways and guarantees of railway issues made to the formerly privately-owned roads prior to and since the change in ownership, and prior to and since reorganization of the railway systems under the Canadian National form of management. The statements are given in order of the acquisition of the several railway properties:—

#### CANADIAN NORTHERN RAILWAY

D. 1. Cash loans outstanding at December 31, 1929.....	\$ 344,799,978 66
2. (a) Dominion guarantees (held by public) at December 31, 1929.....	\$ 138,489,892 40
3. (b) Provincial guarantees assumed by Dominion	78,468,700 92
	<u>216,958,593 32</u>
Total.....	<u>\$ 561,758,571 98</u>

#### GRAND TRUNK PACIFIC RAILWAY

1. Cash loans outstanding, December 31, 1929.....	129,926,806 56
2. A. Guarantees (held by public) December 31, 1929..	43,432,848 00
2. B. Provincial guarantees assumed December 31, 1929	13,457,826 00
	<u>56,890,674 00</u>
Total.....	<u>\$ 186,817,480 56</u>

#### GRAND TRUNK RAILWAY

1. Cash loans outstanding December 31, 1929.....	118,582,182 33
2. Guarantees (held by public) December 31, 1929.....	265,950,141 67
Total.....	<u>\$ 382,532,324 00</u>

Formidable enough as the foregoing figures are, they do not present a complete picture. They are complete as to loans, because there have been no repayments other than temporary financing, which forms no part of the foregoing figures. But as to the guarantees, the situation changes as issues mature. They mature, for instance, in the name of the issuing company, the old former corporate entities, but are met and refunded out of Canadian National issues of the reorganized company. For that reason, the guarantees associated with each of the three former privately-owned companies, as listed above, will gradually diminish as they are replaced by guaranteed issues by the Canadian National

Railway Company. The complete picture is, therefore, only presented by the inclusion of Canadian National financing since April 1, 1923, which, at December 31, 1929, had assumed the following proportions:—

## CANADIAN NATIONAL RAILWAY

1. Cash loans outstanding December 31, 1929.....	\$ 2,149,381 75
2. Guarantees (held by public) December 31, 1929.....	359,175,551 67
Total.....	<u>\$ 361,324,933 42</u>

Included in the above mentioned guarantees are Grand Trunk Pacific debentures, \$31,675,551.67, which were unguaranteed prior to the arrangement reached with the holders in 1927, and \$22,689,575.32 which had to be raised by the Canadian National to retire, in 1928, Canadian Northern income debenture stock which had not been guaranteed when put out by the parent company.

If the cost to the Canadian taxpayer, who has had to provide the moneys loaned and assume the contingent liability involved in the giving of guarantees, were fully understood and appreciated abroad, there would probably be less of the criticism, still heard occasionally, as to Canada's course with respect to certain railways. The wonder is not that a relatively small number of investors lost their holdings, but that so many were able, through generous consideration by the Canadian Government, to preserve their investment and even to enhance their security. And it is not out of place to state here, perhaps, that, but for an error in judgment of the former Grand Trunk management in declining the original offer of the Canadian Government, there need have been no loss of holdings, nor any diminution of return to Grand Trunk shareholders.

## REPORT OF DEPARTMENTAL ACCOUNTANT

Expenditures by the department during the fiscal year ended March 31, 1930, amounted to \$27,407,086.97, divided as follows: railways, \$7,232,996.47; canals, \$12,136,197.98; general, \$8,037,892.52. Of the railway expenditure, \$5,357,692.75 was attributable to Hudson Bay railway construction, and \$1,039,133.69 to the Churchill terminals of that road; \$350,686.91 to Board of Railway Commissioners, and \$475,055.11 to contributions from Grade Crossing Fund for the elimination of level crossings in the interests of public safety. Principal miscellaneous expenditures were: deficits, eastern lines Canadian National Railways, \$4,526,645; Maritime Freight Rates Act, 20 per cent reduction in rates, Canadian National Railways, \$2,060,000 and privately-owned roads, \$811,149.41; Government Employees Compensation Act, \$452,626.11.

On canals, the chief expenditure was connected with the construction of the Welland ship canal, and amounted to \$9,378,626.15, while general canal expenditures amounted to \$2,757,571.83. Of this latter sum, \$1,157,353.01 was the cost of operation of the entire canal system. The balance was repairs and maintenance. Revenues received from canal sources during the year amounted to \$1,043,646.87. No tolls are collected from vessels using the canals and the revenues referred to have to do with hydraulic leases, rentals, wharfage and earnings from operation of Port Colborne elevator, which was the principal revenue and amounted to \$404,680.23.

Expenditures on railway account by the Government have amounted to \$1,408,490,542.16 prior to and since Confederation. During the same period \$300,397,493.61 was spent on canals, of which amount \$225,909,707.31 was on capital account, \$16,036,444.02 on heavy repairs, \$26,009,161.48 on ordinary repairs and maintenance, while \$32,442,180.80 represents staff and operating costs. The capital expenditure of \$225,909,707.31 above referred to includes \$112,891,841.73 expended to March 31, 1930, on the new Welland ship canal.

## HUDSON BAY RAILWAY

During the year ended March 31, 1930, \$5,357,692.75 was expended on the Hudson Bay railway and \$1,039,133.69 on port development at Churchill. At that date the total expenditure on the railway had been \$29,527,025.54, on the harbour at Churchill \$4,707,160.15, and on the work at Port Nelson \$6,240,200.86, a total of \$40,474,386.55. Of the amount expended on the railway the principal items were as follows:—

Grading.....	\$ 9,617,422 65
Track-laying and surfacing.....	3,188,640 05
Ties.....	2,925,678 67
Rails.....	2,895,602 84
Ballast.....	2,580,458 57
Bridges, trestles and culverts.....	2,405,536 08
Engineering.....	2,074,993 83
Shops and engine houses.....	847,337 78
Track material other than ties and rails.....	687,708 60
Telegraph and telephone lines.....	534,844 30
Water stations.....	510,756 63

The work of rehabilitating the portion of the line between The Pas and Amery, Mile 356, has made steady progress during the past four seasons and during the year under review a great deal of work has been accomplished in the lifting of sags, widening of banks, filling of bridges, ballasting of track, excavation of drainage ditches, completion of various terminal facilities and water supplies, as well as general repairs to track and other miscellaneous work necessary to keep the line safe for traffic.

An average force of 110 sectionmen and two roadmasters was maintained during the year on general trackwork and two mixed trains and one freight train were operated on a weekly schedule from The Pas to Herchmer, Mile 412. The new terminal at The Pas was completed during the year. At Wabowden, Mile 137, a new station of special design was constructed, 1,100 feet of sewer line installed and large septic tank constructed to comply with the regulations of the Department of Health. At Gillam terminal, Mile 327, all necessary machinery was installed and foundations placed for new station building of special design. A typhoid outbreak at Gillam, due to impure water supply, was met by the construction of a dam across Little Kettle river and the installation of a chlorinating plant.

Between Amery, Mile 356, and Churchill, Mile 510, tracklaying was carried on through the winter with satisfactory results and the steel reached Churchill on March 29, 1929. Previous to this date, a large amount of building material, supplies and equipment, including one complete steam shovel outfit and, in all, approximately 400 cars, were delivered to the line, and on arrival of steel at Churchill this material was rushed in before break-up; this material to be used during this summer in the construction of railway facilities and terminal at that point, and also for the purpose of opening up a ballast pit at Churchill, in order that ballast operations might be carried on from both ends. All this was accomplished, but not without many unforeseen difficulties, the most serious being a shortage of water for locomotives, which was caused by all northern rivers becoming frozen to the bottom due to the previous very dry fall. This necessitated the hauling of water from Mileage 374 as far north as Churchill—136 miles.

A second serious unforeseen condition arose during the last week in April when a northern blizzard lasting two weeks completely blocked the line for 100 miles, from Churchill south, isolating several traincrews and extra gangs, as well as a hospital train carrying nine typhoid patients, and a large number of workmen. The food and fuel supplies on these trains soon diminished and it was necessary to use dog teams and tractors to haul in sufficient supplies to these men until May 18 when a relief train consisting of two snow ploughs and four engines was able to reach them from the south.

Ballasting operations were commenced on June 1 and carried on continuously throughout the summer with very satisfactory progress and by the end of the season this section of the line was in very fair condition, no difficulty being experienced in operating trains at a fair rate of speed to Churchill.

The construction of railway facilities at Churchill was carried on throughout the summer and sufficient track laid to take care of present requirements; also considerable material was delivered for dock construction.

From June to October, inclusive, an average of 1,650 men were employed on that portion of the work taken care of by Canadian National railway construction forces, and 359 on work let to contract. The latter consisted of clearing of right of way, grading, culvert excavation, etc., the track and station work being done by the railway company's forces on behalf of the department.

On December 3, owing to the fact that terminal work at Churchill was closed down for the winter, train service over that section of the line was discontinued until spring, and all railway forces removed between Mile 327 and Churchill.

Very good progress was made on port development at Churchill. During 1929 season the camp was enlarged to accommodate more men than were employed during 1928, and during the peak of the season's activities 528 men were employed. The back line of cribwork for the permanent dock was built, as well as 1,100 feet of railway trestle northward from end of steel. Material to the extent of 450,000 yards was dredged from in front of the proposed dock to permit construction of deep-water cribs in 1930; 96,000 yards of gravel were excavated with steam shovel, and two cargoes of coal unloaded. Considerable material was moved from Nelson to Churchill by boat, and supplies delivered to Baker Lake for the Dominion Exploration Company.

The dredging plant was strengthened by the arrival of the tug *Graham Bell* in tow of the *Ocean Eagle*, for use with the dredges, and the work force erected the 450-yard steel dump scow manufactured in Welland and shipped to Churchill by steamer in 1928. The force also built a timber scow 100 feet by 32 feet for use in crib construction in 1930, and sawed up and dressed material for a second scow of about the same size. The dredging equipment actively engaged during the 1929 season consisted of two dipper dredges, two hopper barges, two dump scows, and the tugs *Graham Bell* and *Geo. W. Yates*.

By Order in Council of May 15, 1930, a contract with the Carter-Halls-Aldinger Company Limited, of Winnipeg, was authorized for the construction of a 2,500,000-bushel elevator at Churchill, at an estimated cost of \$2,115,529.

#### PRINCE EDWARD ISLAND CAR FERRY

A contract for an additional ice-breaking car ferry for use between Port Borden, P.E.I., and Cape Tormentine, N.B., was let to Messrs. George Davie & Sons, Limited, Quebec, as approved by Order in Council, P.C. 517, of March 8, 1930. The cost of the new vessel is estimated at \$2,112,600, and the contract calls for delivery before July 15, 1931. The firm of Lambert & German, Naval Architects, Montreal, has been engaged to superintend the construction on behalf of the department, the arrangement being approved by Order in Council, P.C. 518, of March 8, 1930.

The existing steamer is 300 feet long and 52 feet beam, and has two tracks, to accommodate twelve freight cars, in addition to passenger accommodation. It has no special provision for motor cars, which must be shipped on board the vessel on flat cars. The present steamer burns coal.

The new steamer will be 324 feet long, 59 feet beam, and have three tracks to accommodate sixteen freight cars and deck accommodation for forty average-size motor cars, in addition to passenger accommodation. It will be an oil-burner. Oil fuel was adopted in preference to coal on the new steamer on the strong recommendation of the Associated Boards of Trade of Prince Edward

Island. It is held to be cheaper than coal, and to enable the vessel to operate on less draught—an important consideration in the shallow waters of Northumberland strait. Better fire control is also claimed for oil, which is important in the case of an ice-breaking ferry steamer operating intermittently. In addition, it is held to be cleaner, and avoids the cleaning of furnaces as well as making possible the continuous development of full power over long periods when engaged in ice-breaking operations in winter.

The placing of a larger steamer on the route and the provision of facilities for handling motor cars involve considerable terminal changes. The present piers will be widened to accommodate a motor roadway in addition to the existing railway tracks; transfer bridges for motor cars will be built, and the existing railway transfer bridges and fenders altered so as to accommodate either steamer. Oil storage tanks sufficient to carry the ferries over the winter season will be built and oil brought direct in tank steamer lots during the season of navigation.

The improvement of the terminals was started in 1928 by the Canadian National Railway forces. A contract for the dredging, rock-filling and cribwork was let to the Northern Construction Company, at a cost of \$734,976, and approved by Order in Council, P.C. 1699, of September 24, 1929. This contract has been sub-let by the Northern Construction Company to the Canadian Dredging Company. The contract calls for completion of the work before October 31, 1930. A contract for a 60,000-gallon steel tank has been let to the Horton Steel Works, Limited, of Bridgeburg, Ont., at an estimated cost of \$6,580, as approved by Order in Council, P.C. 12, of January 7, 1930.

The estimated capital expenditure involved in the provision of car ferry and terminals in connection with the Prince Edward Island service is as follows:—

—	Terminals	Steamers	Total
	\$ cts.	\$ cts.	\$ cts.
Original ferry.....	2,592,128 26	680,947 32	3,273,075 58
Improvements now under way—estimated expenditures by fiscal years—			
1928-29.....	172,862 35		172,862 35
1929-30.....	84,243 27	232,000 00	316,243 27
1930-31.....	1,307,314 38	1,276,000 00	2,583,314 38
1931-32.....		812,000 00	812,000 00
	1,564,420 00	2,320,000 00	3,884,420 00
Estimated total expenditure on completion of improvements now under way.....	4,156,584 26	3,000,947 32	7,157,495 58

#### BRANCH LINE CONSTRUCTION

Since the reorganization of the Canadian National Railways three branch line construction programs have been sanctioned by Parliament. The first of these, 1924-5, authorized the construction of 592 miles of railway at an estimated cost of \$15,917,466; the second, or 1927 program, 458 miles, at an estimated cost of \$17,305,399, and the third, the 1929 program, 628 miles, at an estimated cost of \$25,883,000, a total of 1,678 miles of new line at an estimated cost of \$59,105,865. These programs are planned and financed over a three-year construction period.

During 1929 the Rosedale Southeasterly line, in Alberta, was completed by the Canadian Pacific, the Canadian National contributing \$914,651.08, being one-half of the cost of the line, over which both companies will have joint running rights. This completes the last remaining item of the 1924-5 program. On the 1927-1930 program \$11,973,372.76 was expended before, and \$5,332,026.30 during 1929. Estimated expenditure to complete the various branches provided

for under the 1927 legislation amounts to \$500,000, and all of these lines will be completed within the prescribed time.

On the 1929-1932 program, \$4,421,139.13 was expended to December 31, 1929. The total expenditure on branch lines during 1929 was, therefore, \$9,913,353.73. The construction work actually accomplished consisted of 300.58 miles of grading, 205.85 miles of tracklaying, 314.32 miles of ballasting, 289.46 miles of telegraph line and 240.61 miles of fencing.

Including the \$500,000 required to complete the 1927-1930 program, the total anticipated expenditure on branch lines during 1930 is \$8,000,000.

Seventeen projects were included in the 1929-1932 program. One of these, a branch from Alliance to a point near Youngstown or Dobson, in Alberta, provided for a possible joint arrangement for running rights with the Canadian Pacific Railway. Instead of building 82 miles of Canadian National line, authority is, therefore, being exercised for the construction of two miles only, as running rights are expected to be obtained from the Canadian Pacific Railway over the remainder of the distance. On this work, \$15,972.90 was expended on engineering during 1929, and \$60,000 is expected to be expended in 1930. On the line from Bulwark, southeasterly, similarly, only preliminary work was possible during 1929, costing \$39,039.48. It is estimated that \$200,000 will be expended during 1930. On the line from Westminster to Lulu Island, in British Columbia, engineering work and land purchases involved an expenditure of \$214,374.55 during 1929, and it is expected that \$900,000 will be expended during 1930. Engineering work only was possible on the line from Swift Creek to Tête Jaune, in British Columbia. The expenditure involved was \$15,453.61, and the estimated expenditure for 1930 is \$200,000. In Ontario, preliminary surveys at a cost of \$1,519.85 were made for the Brantford Cut-off and on the Sudbury Basin branch survey work was proceeded with at an expenditure of \$15,776.43. On the other eleven projects, considerable progress in actual construction was made, viz.:—

#### NOVA SCOTIA

*Sunny Brae-Guysborough, 67.0 miles; estimated cost, \$3,500,000.*

On September 16, 1929, tenders were called for the clearing, grading, installation of bridges and culverts, tracklaying, ballasting, fencing, etc., on this line. Contract was awarded on November 14, 1929, to the Dominion Construction Company, Limited. Contractor started work December 4, 1929, and as at December 31, 1929, had completed 16.65 miles of clearing, and 0.23 per cent of the grading. \$56,711.32 was expended on this line during the calendar year 1929, and it is estimated that \$1,700,000 will be expended during the year 1930.

#### PRINCE EDWARD ISLAND

*Lake Verde-Pisquid, 10 miles; estimated cost, \$370,000.*

On September 5, 1929, tenders were called for the clearing, grading and installation of bridges and culverts, etc., on this line. Contract was awarded on October 10, 1929, to Mr. H. N. Price. Contractor started work on October 12, 1929, and by December 31, 1929, had completed some clearing and 3 per cent of the grading. \$30,350.36 was expended on this line during the calendar year 1929, and it is estimated that \$300,000 will be expended during the year 1930.

#### ONTARIO

*Garson spur extension, 3.52 miles; estimated cost, \$185,000.*

On June 19, 1929, tenders were called for the clearing, grading, bridging, installation of culverts, fencing, etc., on this line. Contract was awarded on July 8, 1929, to H. T. Routly and Chisholm Construction Company, Limited.

Contractors started work on July 22, 1929, and by October 30, 1929, had completed contract. Tracklaying and ballasting by railway forces were completed as at November 7, 1929. Authority to open line for carriage of traffic was granted on December 14, 1929. \$113,832.05 was expended on this line during the calendar year 1929, and it is estimated that \$20,000 will require to be expended during 1930.

## SASKATCHEWAN

*Melfort-Aberdeen, mileage (including 17 miles already graded), 89 miles; estimated cost, \$2,800,000.*

On May 20, 1929, tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on June 18, 1929, to Stewart and Cameron. Contractors started work on June 19, 1929, and as at November 9, 1929, had completed contract.

Tracklaying by railway forces was commenced August 14, 1929, and as at December 31, 1929, 85 miles of track had been laid. Railway forces also completed the following work during the year 1929: bridging, 85 per cent; ballasting, 38 per cent; and telegraph line, 34 per cent.

Authority to open about 19 miles of this line for carriage of traffic was granted November 26, 1929.

\$2,076,362.39 was expended on this line during the calendar year 1929, and it is estimated that \$500,000 will be expended during 1930.

*Mawer Southwesterly, 50 miles; estimated cost, \$1,800,000.*

On May 29, 1929, tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on June 19, 1929, to Wm. A. Dutton. Contractor started work on June 26, 1929, and as at December 31, 1929, had completed 38 per cent of the grading, and 98 per cent of the culverts. \$312,587.41 was expended on this line during 1929, and it is estimated that \$770,000 will be expended during 1930.

*Neidpath-Swift Current, 31 miles; estimated expenditure, \$1,200,000.*

On May 29, 1929, tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on June 19, 1929, to The Western Construction Company, Limited and Gibbs Bros. Contractors started work on July 3, 1929, and as at December 31, 1929, had completed 87 per cent of the grading and 95 per cent of the culverts. \$269,912.84 was expended on this line during 1929, and it is estimated that \$100,000 will be expended during 1930.

*Ridgedale, easterly, 30 miles; estimated expenditure, \$1,100,000*

On September 20, 1929, tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on October 29, 1929, to Stewart and Cameron, Limited. Owing to the lateness of the season, very little work was done by the contractors during the year 1929. Surveys of line were, however, completed by railway. \$19,759.28 was expended on this line during 1929, and it is estimated that \$250,000 will be expended during 1930.

*Unity, southwesterly, 50 miles; estimated expenditure, \$1,750,000.*

On May 29, 1929, tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on June 19, 1929, to Brooks Construction and Transportation Company, Limited. Contractors started work on July 10, 1929, and as at December 31, 1929, had completed 65 per cent of the grading and 61 per cent of the culverts. \$431,321.42 was expended on this line during 1929, and it is estimated that \$1,100,000 will be expended during 1930.

*Hamlin-Glenbush, 33 miles; estimated expenditure, \$1,150,000.*

On July 9th tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on August 1, 1929, to the Western

Construction Company, Limited, and Gibbs Bros. Contractors started work on August 14, 1929, and as at December 31, 1929, had completed 68 per cent of the clearing, 40 per cent of the grading, and 10 per cent of the culverts. \$176,759.84 was expended on this line during 1929, and it is estimated that \$900,000 will be expended during 1930.

## ALBERTA

*St. Waliburg-Bonnyville, 126 miles; estimated expenditure, \$4,212,000.*

On this project, an agreement has been reached with the Canadian Pacific Railway on that part of the line between about range 24, west of the Third meridian, in the province of Saskatchewan, and about range 1, west of the Fourth meridian, in the province of Alberta, whereby the Canadian National will give the Canadian Pacific joint and equal running rights, or that section will be constructed and owned jointly by the two railways, in which event the cost to the Canadian National Railways will be reduced by the amount expended by the Canadian Pacific Railway.

On July 9, 1929, tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on August 1, 1929, to The Tomlinson Construction Company, Limited. Contractors started work on August 14, 1929, and as at December 31, 1929, had completed 27 per cent of the clearing, 25 per cent of the grading, and 15 per cent of the culverts. \$324,367.96 has been expended on this line during 1929, and it is estimated that \$400,000 will be expended during 1930.

*Hemaruka-Scapa, 41 miles; estimated expenditure, \$1435,000.*

On May 29, 1929, tenders were called for the clearing, grading and installation of culverts on this line. Contract was awarded on June 19, 1929, to Foley Bros. Limited. Contractors started work on July 3, 1929, and as at December 31, 1929, had completed contract. \$307,037.44 was expended on this line during 1929, and it is estimated that \$100,000 will be expended during 1930.

## MARITIME FREIGHT RATES ACT

The Canadian National lines east of Levis and Diamond Junction, Quebec, as well as all privately owned lines operating in maritime territory, are subject to the 20 per cent reduction from normal rates authorized under the Maritime Freight Rates Act, which became effective July 1, 1927. The deficiency in revenues resulting from this reduction in rates is recouped all railways concerned by the federal treasury, payment being made by the Department of Railways and Canals upon certification of the accounts by the traffic department of the Board of Railway Commissioners. In the case of the Canadian National lines, the Government also provides in the estimates of the railway as submitted to Parliament, an item to cover the deficits in receipts and revenues other than those due to the statutory reduction in tolls. That the railways subject to the provisions of the Maritime Freight Rates Act enjoyed an increase in business during 1929 is indicated by the fact that the reductions in rates on Canadian National lines in the maritime area amounted to \$2,451,818.12 last year, as compared with \$2,151,527.75 in 1928, while the total rate reduction enjoyed by shippers under the Act amounted to \$3,262,967.53 in 1929, as compared with \$2,980,420.91 in 1928.

The Government's contribution on rate reduction account is treated as an addition to revenue, and on this basis the operating deficit 1929 was \$326,629.14 less than 1928. The Government's contribution to meet the deficit is treated as an income credit. Taking this credit into consideration, the net income deficit, Eastern lines, was \$5,165,255.64 for 1929 compared with \$5,138,026.77 for 1928.

The cost of implementing the rate reduction from July 1, 1927, to December 31, 1929, was \$7,596,852.89 and, on deficit account, Eastern lines, \$11,080,510.15, a total of \$18,677,363.04. Details of these payments are appended:—

EXPENDITURES OF DOMINION GOVERNMENT UNDER THE MARITIME  
FREIGHT RATES ACT

	July 1 to December 31, 1927	Calendar Year 1928	Calendar Year 1929	Total
	\$ cts.	\$ cts.	\$ cts.	\$ cts.

\*These Gaspe lines acquired by Canadian National Railways, June 1, 1929.

### THE CANALS

From the traffic standpoint, the 1929 season of navigation was unusual in certain respects. At Sault Ste. Marie, where the heavy traffic is iron ore down-bound and coal upbound, the traffic during 1929, for both the United States and Canadian locks, reached the record figure of 92,616,898 tons, exceeding the 1928 tonnage by 5,624,644 tons, and exceeding the previous record of 1916 by 728,679 tons. Traffic through the Canadian lock, amounting to 2,374,119 tons, was heavier than in any season since 1919.

On the Welland and St. Lawrence canals, where grain is the principal commodity, the traffic naturally reflected the light grain crop and restricted movement due to the non-marketing during the customary period of so much Canadian wheat. There was, therefore, a reduction in the Welland canal traffic of 2,261,405 tons of wheat and 2,858,563 tons of all grain and grain products. There was an increase in the carriage of coal and some other products, but the total traffic on the Welland canal during the 1929 season was lighter than the record tonnage of 1929 by 2,669,751 tons, or 36 per cent. The St. Lawrence traffic was similarly affected, the transport of wheat decreasing by 2,236,339 tons, and the total tonnage by 2,692,891 tons, while the decrease in through traffic was slightly greater.

The usual maintenance and repair work was carried out on all canals and the navigation season was comparatively free from accident or serious delay. It is of interest to note the high water conditions in the past few years were maintained at Sault Ste. Marie, and that the water there continued to rise. The average water level in the Canadian lock at that point was 7 inches higher than that of the previous season, 23 inches higher than in 1927, and 39 inches higher than the level of 1926, the latter being the lowest of record. Present indications

suggest that the peak has been passed, as the present level, 1930, is below that of a year ago.

The year under review marks the completion of a century of canal navigation across the Welland peninsula, lakes Erie and Ontario, with a difference in level of 325½ feet, having been first united for purposes of internavigation by the construction of the original Welland canal between the years 1824 and 1829. This canal, leaving lake Ontario at Port Dalhousie, traversed half the width of the peninsula from St. Catharines, Thorold and Allanburg to Port Robinson, with which point a connection was made via the Welland river to an outlet into the Niagara river at Chippawa, about two miles above the Niagara falls. Shortly thereafter a direct route from Port Robinson to lake Erie, at Port Colborne, was substituted for the original circuitous channel via Chippawa and the Niagara river.

During the 1929 season good progress was made on the construction of the Welland ship canal, which work has been under way since 1913 with some delay due to the closing down of operations during the war. The new ship canal leaves lake Ontario at the original mouth of Ten Mile creek, now known at Port Weller, about three miles east of Port Dalhousie, where a harbour has been constructed, and follows a different route from the present canal as far south as Allanburg. From there it proceeds in general along the line of the existing canal to Port Colborne with a slight diversion near Humberstone. The total distance travelled from lake to lake is 25 miles. The difference in level between the two lakes is overcome by seven lift locks, all of which are now practically completed, each having a lift of 46½ feet, and one guard lock of variable lift. The locks are 829 feet long between inner gates and 80 feet wide, and provide a depth of 30 feet of water over the mitre sills. The width of the canal prism at bottom is 200 feet. It has been hoped that the work would have been sufficiently advanced to make it possible to officially open the new canal during the present fall season, but this has now been found to be impossible, for reasons beyond the control of the department, the contractors having unexpectedly encountered very hard material in dredging the channel on the summit level about 1½ miles north of Welland. In addition, delay has been encountered in the provision of necessary safety devices, including a special 500-ton steel pontoon gate lifter. Delivery of this was stipulated for the middle of August, whereas the contractors now find construction cannot be completed before the end of October. There has been delay also in the delivery of the 3½-inch steel wire ropes for the protection of the gates against collision with passing boats, and this also will not be available until late in the season. It was, therefore, considered advisable to postpone the opening ceremony until the commencement of the 1931 season of navigation.

There are eight locks on the new Welland Ship canal, of which lock No. 8 was placed in operation during the fall of 1929, and numbers 1, 2 and 3 with the opening of the 1930 navigation season. The twin flight locks Nos. 4, 5 and 6, together with lock No. 7, and the gate guarding the summit level, have been completed, and it is expected that, during the fall season of 1930, the entire new canal will be available for the passage of present canal sized boats, and it may be possible to permit, towards the end of the present navigation season, the loading of vessels to drafts deeper than 14 feet through the Ship canal.

The principal items of work involved in the construction of the entire canal, the estimated quantities on the final completion of the work, and the percentages of these totals as completed to March 31, 1930, are given in the following statement:—

Rock excavation.....	9,069,000 cu. yds.	93 per cent
Earth excavation.....	51,193,000 "	91 "
Concrete.....	3,509,000 "	98 "
Watertight embankment and puddle.....	4,921,000 "	99 "
Reinforcing steel, spikes, bolts, etc.....	36,972,000 lbs.	95 "
Steel sheet piling.....	55,363,000 "	97 "

Looking to the future, considerable forestry work has been undertaken in connection with the new canal, and the extensive planting of trees and shrubs for the protection and ornamentation of canal banks and lock areas, which have been going on for some years past, were continued during 1929. Trees developed from seed in nurseries at Port Weller were transferred to transplanting beds, and cuttings from the Ontario Forestry Departments have been extensively utilized, and it is estimated that a total of 500,000 trees of all native varieties have now been set out along the canal. In addition, a greenhouse has been erected at Port Weller for the cultivation of plants to be used for the beautification of the lock areas.

#### GOVERNMENT EMPLOYEES COMPENSATION ACT

The Department of Railways and Canals administers the Government Employees Compensation Act for all departments of the Government. This arose by reason of the fact that by far the greater number of cases requiring attention developed among employees of the Canadian Government railways and canals, and the department thus had the necessary clerical and legal facilities to take care of the work as a whole. Since 1918, when the Government Employees Compensation Act became law, to March 31, 1930, the total expenditure under the act, for compensation, pensions and administration, has been \$3,158,079.32. The amount disbursed for pensions and compensation during the fiscal year 1929-30 was \$429,098.19, an increase of \$48,016.64 over the previous year. This increase is largely due to increase in pension costs. Dominion Government pension awards are not capitalized, the current pensions being paid direct by the provincial Workmen's Compensation boards from deposits made available by the department. Particulars of the payments to the provinces, and disbursements on account of the various departments of the Government and of Canadian Government Railways will be found in the detailed report of the departmental accountant.

I have the honour to be, sir,

Your obedient servant,

V. I. SMART,

*Deputy Minister of Railways and Canals.*

OTTAWA, November 15, 1930.

# CANADIAN NATIONAL RAILWAYS

MONTREAL, QUE., March 31, 1930.

To the Hon. T. A. CRERAR, M.P.,  
Minister of Railways and Canals,  
Ottawa, Ont.

SIR,—On behalf of the Board of Directors I have the honour to submit the report of the operations and affairs of the Canadian National Railway System for the year ended December 31, 1929.

This report is compiled on the same basis as the report for 1928, the system report being followed by a separate report for the Eastern Lines.

Consolidated income and mileage statements, including the Eastern Lines but excluding the Central Vermont System, are shown at the end of the report.

## MILEAGES

	Miles owned by constituent companies	Miles under lease or contract	Miles under trackage rights	Total
Central Region (lines west of Levis and Diamond Jet.)	7,217.71	395.03	18.57	7,631.31

Operating ratio.....	82.66	78.89	

After taking into account all fixed charges and interest due the Government, the deficit for 1929 was \$40,933,994 as compared with the 1928 deficit of \$24,730,410. This increased deficit is partly due to decreased earnings and partly to increased fixed charges.

#### GROSS REVENUE

There was a decrease in gross revenue of \$16,752,948 (6 per cent), almost entirely due to the reduced crop in the Prairie Provinces and to marketing conditions, as a result of which a large proportion of the grain is still held in this country unsold. The decrease in revenue from grain shipments alone amounted to \$15,509,311; and the non-operation of harvester excursions decreased passenger revenue by \$1,250,000. Another disturbing feature was the depreciation of values on the stock market and the resulting lethargy in business during the latter part of the year.

These conditions, coupled with the large amount of grain carried over from 1928, produced an unusual situation, the natural effect being substantial reductions in gross and net earnings. The consensus of opinion is that such effect should be temporary and that the future march of development in Canada should continue.

During the first seven months gross revenue maintained a high level but adverse crop prospects were reflected in the receipts for August and September. In the last three months of the year the most serious declines in revenue were sustained.

#### OPERATING EXPENSES

Notwithstanding heavy expenditures in maintenance of way, structures and equipment during the first half of the year, and wage increases which became effective in May and June, operating expenses were reduced by \$3,431,451 (1.6 per cent).

The failure of the crop to move in a normal way developed with considerable suddenness and rendered difficult any compensating reduction in expenses. Moreover the railway had already been put to the expense of distributing several thousand empty cars in anticipation of a normal crop movement. The money so spent could not, of course, be recovered.

Having regard also for what was thought to be the temporary character of reduced traffic, it was considered unwise and indeed opposed to national interests to embark upon a wholesale policy of retrenchment which would throw many hundreds of wage earners out of employment, with attendant economic disadvantages. Consequently, while added prudence in expenditures was immediately brought to bear, the company exercised a restraint with regard to measures which conceivably might have created a worse and more permanent condition of depression.

#### MAINTENANCE OF WAY AND STRUCTURES

Although heavy maintenance expense had been incurred before the commencement of the general decline in revenue, curtailment of expenditures during the last six months of the year resulted in a decrease on this account of \$1,142,342 (2.4 per cent).

625.29 miles of new 100 pound rails and 180.12 miles of new 85 pound rails were laid during the year. 469.96 miles of line were relaid.

#### MAINTENANCE OF EQUIPMENT

The increase under this item was \$542,604 (1 per cent) as compared with 1928, due to the increase in shop wages granted in May, and to the larger amount expended on maintenance of equipment before the serious falling off in earnings during the last few months of the year.

## TRANSPORTATION

For the first eight months of the year transportation expenses amounted to only 40·26 per cent of the operating expenses, the lowest ratio for any corresponding period since consolidation. The subsequent decrease in grain and other traffic made it impossible to maintain this ratio, but the aggregate transportation expenses for the year show a reduction of \$3,142,929 (2·9 per cent).

Again attention must be drawn to the considerable expense of distributing many thousands of empty cars in anticipation of a crop movement which failed to materialize.

## MISCELLANEOUS OPERATIONS

This item shows an increase of \$1,331,343 over the corresponding figure for 1928. Of this increase \$739,000 represents part of the cost of the alterations to the Chateau Laurier and includes expenses incidental thereto. About \$178,000 represents alterations to the Fort Garry power plant and to increased accommodation and renewals at that hotel, as well as to renewals and other special items at the Macdonald Hotel and Minaki Lodge. All these amounts are paid for out of operating income and were therefore chargeable to income account.

## BETTERMENTS

The principal items under this heading were as follows:—

Completion of new locomotive erecting shop at Point St. Charles; work on the Toronto Viaduct Scheme, including a new coach yard; construction of an industrial spur (4·6 miles) at Walkerville; grade separation at Pontiac and South Bend; work on the new line through Royal Oak, Michigan; construction of 18·52 miles of second main track on the Sprague Subdivision, Western Region; diversion of 3·42 miles through Saskatoon, including rearrangement of yards and additional station tracks; increase in yard capacity at Edmonton; work on the Chateau Laurier extension and on the Vancouver Hotel.

In addition to the above work was done on the Montreal Terminals scheme; and on the site for the new station at Hamilton.

## CONSTRUCTION

During the year work on branch lines, practically all in the three Prairie Provinces, was carried as follows:—

	Mileages		
	Grading	Track laying	Ballasting
Sherritt Gordon Branch.....	42·3	42·3	42·3
Hudson Bay Railway (Churchill extension).....	50·0	43·50	29·0
System Lines.....	303·33	205·85	314·32

On the Flin Flon Branch grading, ballasting and certain revision and other work was done, including a new station at Cranberry Portage, permanent telegraph line, forty miles of which have been completed.

On the Sherritt-Gordon Branch preparatory work only was done prior to 1929. During that year construction was completed as follows: location by February 4; track laying by September 29.

On the Hudson Bay line further rehabilitation work was undertaken during the year. Steel reached Fort Churchill on March 29. Ballasting commenced on June 1 and operation of trains to the Fort can be carried on at a fair rate of speed.

The work on these three branches involved very special difficulties on account of the nature of the country traversed; but these difficulties were overcome by special methods, greatly to the credit of all concerned.

### TRAFFIC

The reduction of \$15,786,052 (7.5 per cent) in freight revenue is principally due to the decrease in grain shipments. The total estimated Canadian grain crop for 1929 was 501,206,000 bushels—56 per cent less than in 1928.

The total decrease in all commodities handled was 4,257,000 tons; the decrease in system grain shipments being 4,429,476 tons, of which 3,457,794 tons represented a decrease in Western Region grain shipments.

In 1929, 84,255 (46 per cent) less cars of grain were shipped over our lines by various routes than in 1928; the main decreased deliveries being at the following places:—

Port Arthur—Fort William.....	69,218 (48 per cent)
Vancouver.....	10,898 (34 per cent)
Victoria.....	112 (100 per cent)
Prince Rupert.....	4,629 (80.5 per cent)

Revenue from export traffic decreased \$4,786,000 (28 per cent), largely due to decrease in exports of grain. Revenue from import traffic increased by \$1,104,000 (16.6 per cent).

The movement of West Indies bananas ex-Canadian National Steamships as a result of services established under the West Indies trade agreement, amounted to 1,100 cars from Montreal and 136 from Halifax. There was no corresponding movement in 1928.

In general, it may be said that the shipment of bananas from the West Indies to Canada is a demonstrated success, and there is no reason why other fruits, vegetables and West Indian products cannot be marketed in Canada in increasing volume. The British West Indies possessions offer a fruitful field for production and increased trade.

The continuance of test coal shipments from the Maritime Provinces resulted in all rail movement of 92,823 tons to Quebec points, as compared with 5,575 tons in 1928; also in movement from Montreal of vessel-shipped coal from mines in the Maritime Provinces of 193,989 tons as compared with 86,025 in 1928. Special rate Alberta coal shipments to Ontario points aggregated 37,645 tons as compared with 26,536 in 1928.

Passenger revenues decreased \$2,174,000 (6.4 per cent) and the number of passengers carried decreased 3.8 per cent. The reduction in number of immigrants admitted from non-preferred countries caused a loss in revenue of approximately \$285,000.

Unremunerative steam and motor car services totalling 108,913 passenger train miles were eliminated; and motor car services were substituted for 11,739 steam train miles, thus effecting an appreciable saving in operating expenses.

### WAGES AND LABOUR

Harmonious relations between the management and employees were maintained during the year. The principal wage adjustments made were as follows:—

Effective May 1, shop craft employees both Canadian and United States Lines.

Effective June 1, maintenance-of-way employees on Canadian lines and the Duluth, Winnipeg and Pacific Railway.

Effective August 1, clerks, freight handlers, station and baggage room employees, stores and shop labourers, on Canadian Lines.

Various working rules affecting conductors and trainmen were consolidated.

Revised rules affecting locomotive engineers were adopted with respect to mileage regulations, promotion and representation.

### FINANCE

In the 1929 Appropriation Acts \$53,750,000 was voted for Canadian National purposes for the calendar year 1929.

As of July 1, 1929, an issue of \$60,000,000 of 5 per cent forty-year guaranteed gold bonds was made for the following purposes:—

To repay temporary advances made by the Canadian chartered banks..	\$40,000,000 00
Discount on part of issue applicable to the retirement of the Canadian Northern Railway Company 5 per cent income charge convertible debenture stock.....	426,890 40
Various expenditures made under 1929 budget.....	19,573,109 60
	<hr/>
	\$60,000,000 00

As of October 1, 1929, an issue of \$60,000,000 of 5 per cent forty-year guaranteed gold bonds was made for various requirements, approximately as follows:—

Expenditures for branch line construction, Toronto Viaduct Scheme and Montreal Terminals.....	\$16,243,125 63
Acquisition of various railways authorized under Special Acts of Parliament.....	13,673,178 66
Various expenditures under 1929 budget.....	30,083,695 71
	<hr/>
	\$60,000,000 00

As of May 1, 1929, an issue was arranged of \$18,000,000 5 per cent equipment trust certificates series "K", in connection with new equipment costing over \$24,000,000.

The funded debt retirements during the year were:—

Niagara, St. Catharines and Toronto Railway 5 per cent first mortgage bonds, due November 1, 1929.....	\$1,098,000 00
Canadian Northern Railway 4 per cent Sifton Branch bonds, due February 1, 1929. Guaranteed by province of Manitoba.....	1,137,340 00
Canadian Northern Railway 4 per cent Manitoba and South Eastern bonds, due February 1, 1929. Guaranteed by province of Manitoba..	510,513 34
Equipment trust certificates of various issues and payments under various sinking funds and otherwise.....	6,765,451 83
	<hr/>
	\$9,511,305 17

It is gratifying to report that notwithstanding the large financial commitments of the company at the commencement of the year, the necessary sums to care for these commitments have been secured on satisfactory terms.

### TELEGRAPHS

Notwithstanding the depression in general business conditions during the latter part of the year the revenue from commercial telegraph business was satisfactory. The carrier current system was extended to Vancouver. This made possible the leasing of transcontinental circuits to private concerns both for ordinary commercial business and for radio broadcasting from which considerable revenue is derived.

The previously arranged purchase of Western Union telegraph properties in the Maritime Provinces was completed on July 1.

## EXPRESS DEPARTMENT

Gross operating revenues were increased by \$73, 955 (0.6 per cent), of which about 80 per cent is due to shipments of general merchandise and of packages of 15 pounds and less. There were increases in shipments of lobsters, foxes and bullion and decreases in shipments of fish. General business from Eastern Canada and Manitoba was increased; but there were decreases in the business from Saskatchewan, Alberta and British Columbia, partly due to the taking over of the Alberta Northern Railways and the division of traffic between the two owning companies. In view of the fact that express business in 1928 was distinctly good, the increase of gross revenues in 1929 is the more satisfactory, having in view the light western grain crop and the recent depreciation in business, as well as increased motor truck competition particularly in Western Canada.

## INSURANCE

At the end of the year the reserve (excluding Merchant Marine and West Indies Steamship properties) amounted to \$10,299,117. The total premiums received exceeded the amount paid out in losses by approximately \$800,000 and the interest on surplus funds amounted to over \$450,000.

As a matter of interest there is a further reserve of \$3,278,401 devoted to the purposes of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships properties, making a total insurance reserve of \$13,577,518. Substantially all of this amount is invested in first class bonds.

Considerable progress was made during the year in further education of employees in fire prevention. Approximately \$75,000 was expended in providing additional fire-fighting facilities.

## LAND SALES

Seventy-one thousand one hundred and thirty-one acres of farm lands were sold during the year at an average price of \$13.70 per acre, as compared with 85,230 acres sold in 1928 at \$14.46. The decrease in land sales is attributable to the reduced grain crop in the Prairie Provinces. Contracts for the purchase of 20,285 acres, at an average of \$14.86 per acre were cancelled during the year, compared with cancellations in 1928 of 19,433 acres at an average of \$15.92 per acre.

## RADIO

Chain broadcasting was established from coast to coast through the medium of carrier current on Canadian National Telegraph lines.

The company owns broadcasting stations at Moncton, Ottawa and Vancouver. When not required for Canadian National use these facilities are rented for commercial advertising.

Train radio services are available on twenty-four of the principal trains operating to such points as Halifax, Quebec, Boston, Montreal, Toronto, London, Chicago, Winnipeg and Vancouver.

## INDUSTRIAL DEPARTMENT

This department continues to perform a highly useful service, industrial development along the lines of the Canadian National Railways showing a progressive improvement compared with previous years. Three hundred and sixty-nine new plants were established, in addition to which 193 extensions to existing plants were constructed adjacent to the company's lines. The relative aggregate capital expenditures by manufacturing and other industrial concerns amounted to \$99,071,000, compared with \$120,013,400 in 1928.

## PURCHASING AND STORES

There has been a decrease in stocks of material on hand, except in the case of ties, the stock of which will be substantially reduced when weather permits tie renewal work to be done economically. The additional stock of ties on hand is the result of building up a carry-over to protect requirements in the early months of 1930.

In 1929 we secured from our own mines in Ohio 1,477,715 tons of coal, of which 473,950 tons were used on our lines in the United States and the balance on Canadian lines in territory which cannot be served with economy by Canadian coal. Three million, two hundred and fifty-two thousand tons of Canadian coal were used during the year.

Generally speaking there was in 1929 little fluctuation in prices of materials.

The efficiency of this department continues satisfactory. An energetic campaign has been followed to reduce stocks and must ever be pursued with vigor if progressive improvement is to be made.

## COLONIZATION AND NATURAL RESOURCES

The work of the Colonization Department is a source of much gratification. This department embarked upon its activities but a few years ago and has now established a high position in all countries from which immigrants are recruited. Particularly is the department to be congratulated upon the placement of immigrants brought to Canada under its auspices; few, if any, having become a charge upon the public.

Partly on account of changes in immigration conditions the number of immigrants recruited in Europe was decreased about 25 per cent as compared with 1928. Central European immigration showed the only decrease. There was an increase of  $17\frac{1}{2}$  percent in immigration from Great Britain, notwithstanding the limit placed on farm labourers entering the country. Assisted immigration under different existing federal schemes has been continued. Over 2,600 families were settled by the Canadian National Land Settlement Association on lands in our territory in the Prairie Provinces. During the year employment was obtained for 15,355 immigrants, for 6,000 of whom work was again obtained after losing or giving up their positions. Many French-Canadian families returned from the United States. Agricultural development work has continued. The officers of the department have been active in various ways in connection with examinations into and the development of natural resources in different parts of the Dominion.

## EUROPEAN AFFAIRS

Passenger business originating in Europe was naturally lighter than in 1928 on account of restricted emigration. On the other hand freight traffic originating in Europe showed a substantial increase over that of the previous year, with a corresponding increase in the receipts. Express business showed an increase. The number of money orders issued was smaller; but the aggregate value was slightly larger.

The Paris office is recognized as a well known and appreciated centre for European travellers.

More suitable offices were arranged at Gothenburg, Sweden, and improvements were made in other offices.

## UNIFICATION OF AMERICAN COMPANIES AND READJUSTMENT OF THEIR FINANCIAL STRUCTURE

Concurrently with the examination of the financial structures and development of plans for consolidation of our Canadian companies, a comprehensive program for consolidation of our American companies and readjustment of their financial structures was undertaken.

## GRAND TRUNK WESTERN SYSTEM

In December, 1928, an application was made to the Interstate Commerce Commission of the United States for permission to:

- (a) Unify our Grand Trunk Western System companies;
- (b) Definitely authorize the Canadian National Railway Company to control by stock ownership the new Grand Trunk Western Railroad Company; and
- (c) Create a new capital structure, the effect of which would:
  - (1) Permit issue of securities for purpose of reimbursing Canadian National Railways for its investments in and advances to system companies.
  - (2) Permit the new Grand Trunk Western Railroad Company to finance its future additions and betterments through the issuance of securities.

## APPLICATION TO INTERSTATE COMMERCE COMMISSION APPROVED

The Interstate Commerce Commission, by order dated November 8, 1929, approved the consolidation, under the name of the Grand Trunk Western Railroad Company, of the ten lines of railways formerly owned and/or operated by the Grand Trunk Western System or by the Canadian National Railway Company in the states of Michigan, Indiana, Illinois, and Wisconsin, including that part of the railroad of the Chicago, Kalamazoo and Saginaw Railway Company operated under lease, and also including the car ferries and terminal tracks formerly owned and operated by the Grand Trunk Milwaukee Car Ferry Company. The order also authorized the acquisition of control of the Cincinnati, Saginaw and Mackinaw Railroad Company by lease, and the ownership of one-half of the capital stock of the Detroit and Toledo Shore Line Railroad Company, and the purchase from the Canadian National Railway Company of one-half of the capital stock of Detroit Terminal Railroad Company.

The permanent control by stock ownership of the new Grand Trunk Western Railroad Company by the Canadian National Railway Company was definitely authorized by the order above referred to.

The order authorized a new financial structure as follows:—

Funded debt held by public.....	\$13,052,016 00
Securities to be issued to Canadian National Railway Company to liquidate its investment in these properties, which was represented by stocks, bonds, and capital advances:—	
First and general mortgage bonds, Series A, 4½ per cent	\$31,947,000 00
Gold debentures—Series A, 5 per cent.....	10,000,000 00
Cumulative non-voting preferred stock, 6 per cent. ....	22,348,453 82
No par value common stock (stated value \$25 per share)	13,815,997 56
	<hr/>
	78,111,451 38
Total.....	<hr/>
	\$91,163,467 38

The position of the Canadian National in respect to the Grand Trunk Western Companies prior to consolidation was that of being the owner of stocks and bonds (several issues of which were past due) that were not marketable and further it had been necessary for the Canadian National Railway Company (or its predecessor, the Grand Trunk Railway Company of Canada), to make large advances (non-negotiable) for additions and betterments, as well as for deficits in operation of the weaker lines.

The ownership of the new securities will enable the Canadian National to entirely recoup itself as and when desired for its investments in stocks or bonds of, and/or capital advances to, these properties by sale of these securities, and leave absolute control of the new company in the hands of the Canadian National through stock ownership.

In 1929, after meeting all fixed charges and preferred dividends, the new company paid seven per cent on the common stock held by the Canadian National Railways and carried forward to surplus \$1,600,000.

The financial structure of the new Grand Trunk Western Railroad Company will permit the financing of its future normal requirements by its own credit, and will render unnecessary further advances or guarantees.

#### CENTRAL VERMONT RAILWAY

The receivership of the Central Vermont property was terminated on January 31, 1930, the flood damage having been repaired and the property completely rehabilitated. The receivers had purchased ten new heavy freight locomotives and one thousand freight cars, and in addition thereto expended \$1,500,000 for new rails, tie plates, steel bridges. They also turned over in cash more than \$1,600,000 to the new company.

The operating results of the Central Vermont during the past year (1929) was the best in the history of the property, and on the present basis of capitalization the net earnings for the year 1929 would have shown all fixed charges paid and a substantial amount available for dividends or surplus. It has been proven conclusively that this property is valuable to the system.

The Interstate Commerce Commission, by order dated December 14, 1929, authorized the Central Vermont Railway, Inc., to take over the old Central Vermont properties, and authority was given the new company to issue to the Canadian National the following securities:—

First and general mortgage bonds, Series A, 5 per cent.....	\$12,000,000
Gold debentures, Series A, 5½ per cent.....	5,000,000
Common stock.....	10,000,000
	<hr/>
	\$27,000,000

The Canadian National Railway Company is now 100 per cent owner of the capital stock of the new company, as against a 73 per cent stock ownership of the former Central Vermont Railway Company.

The financial structure of the Central Vermont Railway, Inc., will permit the financing of its future normal requirements and should eliminate the necessity of the Canadian National Railways making future advances to this company, or guaranteeing its securities.

#### PENSIONS

A general pension scheme approved by Act of Parliament, came into effect on August 1. It applies to all officers and employees who are not already covered by and do not remain under previously established superannuation or provident funds on a contribution basis.

Fourteen employees with fifty or more years' service were pensioned during the year and their records testify to the loyalty with which they have served the company. Their names are given below and the best wishes of the management are extended to them for a long and well-merited period of retirement.

Name	Years of Service	Name	Years of Service
Abey, J.....	58	Hutchinson, W. H.....	51
Adamson, W. H.....	50	McArthur, A.....	51
Brown, J. W.....	53	McMillan, W. S.....	52
Chambers, R.....	54	Moll, J. F.....	50
Deruchie, C. A.....	54	O'Brien, M.....	52
Demers, P. E.....	53	Sears, W. F.....	52
Hislop, J. B.....	51	Tichbourne, W. H.....	50

The following employees deserve honourable mention for life-saving acts and efforts:—

Bambridge, E. J.  
Best, G. K.  
Blatchford, Sydney  
Cooke, Wm. Fraser  
Foote, Miss Beatrice  
Forbes, Alex. Gordon

Laycock, W. S.  
Marshall, John  
Meens, William Arthur  
Mosher, William  
Sharlow, Alvin

#### MEDICAL DEPARTMENT

Towards the end of 1927 there was appointed a chief medical officer with jurisdiction over the various regional medical officers, the purpose being to standardize, so far as might be considered wise, the work of the medical departments in the different regions; also to organize and develop various arrangements considered essential for the joint protection and benefit of the employees and the company. The results achieved have been particularly satisfactory.

Much further study and investigation will be necessary, however, to determine how far the functions of a railway medical department may be carried with advantage. Consequently what has already been accomplished must be regarded as merely the commencement of a development which it is believed will become much more beneficial.

---

The resignation of Mr. R. A. C. Henry as Director of the Bureau of Economics is much regretted. During his tenure of office in this post he served the company with loyalty and distinction. He will be sorely missed, but it is a matter of gratification to know that, as a director, his advice and counsel will still remain measurably available.

#### OBITUARY

Record is made with sorrow of the following deaths during 1929:—

Mr. Frederick G. Dawson, who had been a director since the reorganization of the railways in 1922.

Mr. Fred Price, who had been connected with the Grand Trunk Transportation Department for many years and who at the time of his death was chief of car service.

Mr. W. R. Woodford, who had been in charge of the company's coal properties in Ohio for many years.

---

On behalf of the Board and the executive, I again desire to refer to the loyal and efficient work performed by officers and employees during the past year. The success or failure of a railway enterprise flows largely from the state of mind of those in its employ. From this point of view those in our service have earned the profound thanks of the board for their fine effort during the past year.

H. W. THORNTON,  
*Chairman and President.*

J. M. ROSEVEAR,  
General Comptroller.

We have examined the books and records of the companies comprising the Canadian National Railway System for the twelve months ended December 31, 1929. The investments in road and equipment appearing in the books of the companies as at January 1, 1923, were accepted by us.

We certify that, in our opinion, the above consolidated balance sheet is properly drawn up so as to exhibit a true and correct view of the affairs of the system as December 31, 1929, and we further certify that, in our opinion, the attached income and profit and loss accounts for the year ended December 31, 1929, are correctly stated.

GEORGE A. TOUCHE & CO.,  
Chartered Accountants,  
Auditors.

March 15, 1930.

## PROFIT AND LOSS ACCOUNT, 1929

*Debits—*

611 Debit balance at January 1, 1929.....\$	472,244,137 84
612 Debit balance transferred from income.....	40,933,994 17
613 Surplus applied to sinking and other reserve funds.....	4,112 60
615 Surplus appropriated for investment in physical property.....	218,310 51
618 Miscellaneous appropriations of surplus.....	122,489 15
619 Loss on retired road and equipment.....	864,164 13
620 Delayed income debits.....	134,430 22
	\$ 514,521,638 62

*Credits—*

603 Profit on road and equipment sold.....\$	428,390 94

Thousand Islands Railway.....	4.60
<i>Electric Lines—</i>	
Canadian National Electric Railway (Toronto Suburban District).....	49.06
Niagara, St. Catharines and Toronto Railway.....	69.52
Montreal and Southern Counties Railway.....	56.02
Oshawa Railway.....	11.92
Total.....	191.12

# CANADIAN NATIONAL RAILWAYS

## EASTERN LINES

MONTREAL, March 31, 1930.

To the Hon. T. A. CHERAR, M.P.,  
Minister of Railways and Canals,  
Ottawa, Ontario.

DEAR SIR,—I beg to submit herewith report of the operations of the Eastern Lines for the year ended December 31, 1929:—

Owned mileage	Mileage under Lease or Contract	Mileage under trackage rights	Total
3,243·55	6·41	82·58	3,332·54

### OPERATING RESULTS

The operating deficit for 1929 was less by \$326,629 than the 1928 deficit. The figures for the year are as follows:—

	1929	1928	Increase or decrease
	\$ cts.	\$ cts.	\$ cts.
Revenue.....	30,618, '07 22	27,959,347 ' 0	2,658,659 92
Expenses.....	3 , 815,382 30	31,483,351 52	2,332,030 78
Deficit.....	3,197,375 08	3, 24,004 22	326,629 14

After taking into account all fixed charges and interest on advances from the Dominion Government the net income deficit was \$5,165,255 as compared with the deficit in 1928 of \$5,138,026.

### TRAFFIC

The increase of \$1,961,252 (10·3 per cent) in freight revenues (6 per cent) in tonnage handled) is due principally to increases in shipments of paper and pulp, iron and steel articles, oils and gasoline, coal and coke, gravel and stone.

Passenger revenues increased by \$159,745 (3·2 per cent) and the number of passengers carried by 4·8 per cent.

Steam services were increased by 52,884 train miles and motor services reduced by 5,876 train miles; a net increase in all passenger services of 47,008 train miles as compared with the increase of 58,104 in 1928. The 1929 increase is chiefly due to the Gaspé and Kent Northern Railways.

The construction of the hotel at Halifax was continued throughout the year and is now nearing completion. Considerable initial work on the Charlottetown Hotel in connection with excavation and otherwise was done during the last few weeks of the year.

Further progress has been made in the renewal of the steel work for the car ferry landings at Mulgrave and Point Tupper.

Arrangements have been made for the construction of a new car ferry between Cape Tormentine and Port Borden, the expectation being that it would be available for service in the spring of next year.

Improvements are under way for dredging and widening the approaches to the piers at the above Ports.

H. W. THORNTON,  
*Chairman and President.*

Government contribution Maritime Freight Rates Act, 1927 ( <i>see note</i> ).....	5,165,255 64	5,133,026 77
Total deductions from gross income.....	3,147,628 48	3,482,414 42
Net income.....		

NOTE.—The Government contribution \$2,438,074.82 to meet the 20 per cent rate reduction under Maritime Freight Rates Act, 1927, has been treated as an addition to Revenue account 501. The Government contribution to meet the deficit of Eastern Lines has been treated as credits to income and profit and loss; of the amount shown in 1929 \$4,762,217.22 is payable in cash (Vote 340) and the remainder is applied in account.

## PROFIT AND LOSS ACCOUNT, 1929

	\$	cts.
<i>Credits—</i>		
603 Profit on road and equipment sold.....	19	77
605 Unrefundable overcharges.....	2,476	76
606 Donations.....	36,997	75
Government contribution ( <i>see note</i> ).....	395,011	86
	434,506	14
<i>Debits—</i>		
619 Loss on retired road and equipment.....	269,028	90
620 Delayed income debits.....	35,076	27
621 Miscellaneous debits and credits, net.....	130,400	97
	434,506	14

We have examined the above Income and Profit and Loss Accounts of the Eastern Lines for the twelve months ended December 31, 1929, and we certify that in our opinion these accounts fairly state the results of the working of such lines, as authorized by the Maritime Freight Rates Act, 1927.

GEORGE A. TOUCHE & Co.,

*Chartered Accountants, Auditors.*

March 15, 1930.

## REPORT OF THE CHIEF ENGINEER OF THE DEPARTMENT OF RAILWAYS AND CANALS

SIR,—I have the honour to submit my annual report for the fiscal year ending March 31, 1930.

The canal system of Canada comprises a series of canals and canalized waters by which a total waterway of 1,831 miles has been opened to navigation. These canals may be considered under two main classes: the through St. Lawrence and Great Lakes route and the subsidiary canals or branches. By the former, communication with seaports is made possible for vessels of not more than 14 feet draught which navigate the Great Lakes. The latter or branch system of canals serves for the most part the requirements of a merely local traffic.

The through water route between Montreal, at the head of ocean navigation, and Fort William and Port Arthur, on the west shore of lake Superior, comprises 74 miles of canal, with forty-nine locks and 1,140 miles of river and lake waters or a total of 1,214 miles. The minimum depth of water on this route, at normal low water level, is 14 feet. From Montreal to Duluth, at the southwest end of lake Superior, the total distance is 1,337 miles and to Chicago 1,244 miles. Connection is made with the Canadian Pacific Railway from points west and south at Fort William and Port Arthur (6 miles apart). From Fort William, connection with the main transcontinental line of the Canadian National Railways is made by the branch line originally constructed by the Grand Trunk Pacific Railway, but now operated by the Canadian National Railways. At Port Arthur, the Canadian National Railways have an additional connection with points west and south *via* the old main line of the Canadian Northern Railway.

A full statement of the various canals and canalized waters now in operation, with their mileage, limiting dimensions, etc., is the subject of a separate departmental publication. "The Canals of Canada". A summary of this data is, however, appended to this report.

In the detailed report which follows, the various canal systems, etc., are taken up in the following order:—

1. The present St. Lawrence and Great Lakes route between Montreal and lake Superior, including the Lachine, Soulanges, Cornwall, Farran Point, Rapide Plat, Galops, Welland, Welland Ship and Sault Ste. Marie canals.
2. The route from Montreal to Kingston *via* the Ottawa and Rideau rivers, including the Ste. Anne lock, and the Carillon and Grenville and Rideau canals.
3. The navigation of the Richelieu river from its junction with the St. Lawrence at Sorel to lake Champlain, including the St. Ours lock and Chambly canal.
4. The route from lake Ontario to Georgian bay *via* the Trent river, including the Murray and both divisions of the Trent canal.
5. The St. Peters canal across the isthmus at the southerly end of Cape Breton island connecting the Bras d'Or lakes with the Atlantic ocean.
6. Miscellaneous works.

## 1. THE ST. LAWRENCE AND GREAT LAKES ROUTE

## (a) LACHINE CANAL

This canal, which lies across the southeasterly portion of the island of Montreal, overcomes the Lachine rapids, between the harbour of Montreal and lake St. Louis. It is 8.74 miles long and has five locks with a minimum depth, at normal low water level, of 14 feet.

The canal opened for traffic April 25 and closed December 11 and was operated without serious accident or delay to navigation during the entire year. A total of 8,842 vessels passed through the canal, a decrease of 2,406 from the record of the previous year. The total tonnage of vessel cargoes amounted to 5,662,172, or about 30 per cent less than for the season of 1928.

Among the more important works of construction and maintenance attended to the following may be noted:—

At locks 1 and 2 the foundations of two gate winches were renewed in concrete. At lock 3 the lower north wing pier was extended in concrete 52 feet to reduce the effect of the rapid current from the supply weir. Four courses of masonry in this lock were removed and will be replaced in concrete during the coming season.

At the upper end of north lock 2 a set of steel stop logs has been provided to replace the former wooden ones. These stop logs, eighteen in number, are of truss design 47 feet 6 inches long, and were constructed under contract with the Montreal Locomotive Works.

General repairs were made to machinery, flooring, cabins, etc., at eight of the eleven bridges which span the canal, the more extensive repairs being made at bridges 4 and 5.

On the north side of the canal between Seigneurs street bridge and a point opposite to Cantin's dry dock several courses of dry masonry wall, for a length of 585 feet, were removed and replaced by a continuous concrete wall. In the same reach the north wall, from a point one-quarter mile east of Côte St. Paul bridge, was underpinned with concrete for a length of 246 feet. As the concrete wall on the south bank, constructed on top of the dry masonry wall, had become very unstable at several places, it was removed and rebuilt, the new wall being securely anchored to the wall below by steel dowels. The old wall in some cases was anchored to the bank by steel rods at fifty-foot intervals imbedded in concrete "dead men".

Four lengths of new boom were constructed having a total length of 575 feet. These were placed along the north wall above Seigneurs street bridge. Other booms were repaired and sunken booms removed.

The flooring of the weir next to Black's bridge was entirely renewed. The pier opposite to the St. Lawrence Flour Mills was partially rebuilt and the granite block paving of the wharf on the north side of north basin 1 was reset at the easterly end of the Canada S.S. Lines sheds.

In the canal yard, Mill street, the old wooden blacksmith shop, which was beyond further repair, was replaced by a new structure 60 feet by 26 feet on concrete foundation with reinforced concrete walls. The roof, which is provided with a skylight, is of wood protected by tarred roofing paper and supported on purlins resting on single-span wooden trusses. The building is provided with a travelling crane running from end to end of the shop and is fitted with the necessary machinery and appliances.

The new Côte St. Paul power house, described in detail in last year's report, was fully completed and put into active operation early in the 1929 season.

The various canal buildings were improved or kept in repair, the following being among the more important items attended to:—

At the old Côte St. Paul power house the two upper stories were converted into lodgings, the ground floor was fitted up as a repair shop, a hot water heating

system was installed, the building wired and the roof repaired. Repairs were made to sheds at Colborne and Ottawa streets, to the Superintendent's and Statistician's offices, to the Foreman Machinist's lodging, to the Chauffeur's and Bridge Motorman's dwellings and to various other buildings.

The floating plant of the canal, consisting of tug *Dandy*, dipper dredge No. 2, clam derrick No. 2, three dump scows, six flat scows, one coal scow, one sounding scow and six row-boats underwent various repairs during the winter. The hull of the tug *Dandy* was painted, the deck repaired and a few other minor repairs attended to. New fenders were provided for dredge No. 2 and the "A" frame, turntable and anchor shields completely renewed. Repairs were also made to the deck and various parts of derrick No. 2 and seams were caulked. The operations of the plant commenced on May 17 and began with the removal of 640 cubic yards of various accumulations at the wharf opposite to the works of the Steel Company of Canada. This was followed by a cleaning up on the north side of the canal above Côte St. Paul lock and the dredging out of previously blasted rock just below the old lock at Lachine. The latter operation involved the removal of 3,110 cubic yards, this material being afterwards deposited for filling purposes at various points along the canal, principally at the end of the wing dam of the lake St. Louis entrance.

#### (b) SOULANGES CANAL

The entrance to this canal lies 16 miles west, or up-stream, of the upper end of the Lachine canal. The canal is 14.67 miles in length, has five locks with a minimum depth of 15 feet, and extends from Cascades Point to Coteau Landing, overcoming the Cascades, Cedars and Coteau rapids.

Navigation opened April 25 and closed December 11, and no serious accidents or delays in the movement of traffic occurred during the season of navigation. A total of 4,753 vessels passed through the canal as compared with 7,060 in the previous season. The total tonnage of vessel cargoes amounted to 4,805,928, a decrease of about 35 per cent from the record of 1928.

Repairs and improvements carried out during the year included the following:—

General repairs made to locks included the pointing of masonry, the replacing of three gates and the painting of all gates, motor boxes, railings, etc.

The seven highway bridges which cross the canal were all kept in good repair. Two of these bridges, at St. Antoine road and at Quinze Chiens road, were scraped and painted. The joists and flooring of the latter bridge were renewed.

On the north bank of the canal, in the reach between locks 2 and 3, where trouble from sliding had been experienced, a row of piles was driven over a length of 550 feet and the slope behind lined with one-man stone. The concrete slab slope protection, also on the north bank, was thoroughly repaired over a length of nearly 4,000 feet. On both banks considerable stretches of riprap slope protection were taken up, reset and reinforced with additional stone. Two landing platforms for the use of ropemen were constructed. Repairs were made to canal roads, ditches were cleaned and all culverts put in good working order.

At the Coteau Landing breakwater the outer slope was repaired and strengthened with stone from Cascades Point quarry. The wooden facing of the quarry wharf was removed to one foot below water level and replaced by a concrete wall 80 feet long and 10 feet in height with a mean thickness of 3 feet.

About one mile of new fencing was erected on the south side of the canal. Other portions of the fencing were repaired and posts painted. The superintendent's house and its outbuildings were painted and the interior of the power house.

The wires on the telephone line were renewed over a distance of nearly five miles.

The operations of the quarry at Cascades Point for the year covered the supply of 5,652 cubic yards of one-man stone, 2,031 cubic yards of crushed stone, 526 cubic yards of screenings and 262 cubic yards of quarry waste. Of this, 1,532 cubic yards of crushed stone were shipped to the Lachine canal.

The various units of the floating plant consisting of tug *Carillon*, a gate lifter, a derrick scow and several flat scows underwent the usual repairs during the winter. During July and August dredge *No. 2* from the Lachine canal, with the clam derrick removed 12,280 cubic yards of stony material and deposited about 30 per cent of it on the south face of the wing dam at the upper entrance and the remainder in front of the breakwater. The clam derrick cleaned up the canal bottom above lock 4 and the guard gates.

#### (c) CORNWALL CANAL

This canal, the foot of which lies at the westerly or upstream end of lake St. Francis, 31 miles from the head of the Soulanges canal, is 11 miles long, with six locks and a minimum depth of 14 feet. It surmounts the Long Sault rapids.

Navigation opened April 23 and closed December 12 and suffered no delays during the entire season. The volume of traffic in the previous year had been the largest on record. A considerable decrease was observed in the returns of last season. For the Ontario-St. Lawrence system of canals as a whole the number of vessels passed was reduced by  $38\frac{1}{2}$  per cent, while freight tonnage showed a reduction of 36 per cent.

All four gates at lock 17 were changed during the year as well as the upper north gate of lock 15 and the lower gate of lock 20, the gates removed being afterwards repaired and placed in reserve.

Earth slopes were repaired below lock 20 and below the regulating weir at lock 18. A total length of slope of 166 feet was thus attended to, being faced with concrete from the bottom of the canal to 2 feet above water level. Stone protection walls along canal banks were rebuilt for a distance of nearly half a mile.

The nine floats and eight floating booms, previously constructed and designed to assist downbound vessels to enter lock 21 at the head of the Cornwall canal with safety, were placed in position early in the navigation season. To these booms three more were afterwards added. They now extend for nearly a quarter of a mile upstream from the lock and have proved very satisfactory. It is intended, however, during the coming season to still further extend them.

From the plant of the Howard Smith Paper Mills, at Cornwall, a 48-inch diameter cast iron pipe, for the accommodation of waste water, was laid under the canal below lock 18, discharging into the outlet of the existing masonry culvert at this point.

Six new valves were placed in the regulating weir at lock 20 and all necessary repairs were made to operating machinery at locks, weirs and swing bridges.

The roads leading to locks 19, 20 and 21 were ditched and regraded. Repairs were also made to the road between the Provincial highway and the Mille Roches bridge which gives access to Sheik's island.

A large new repair scow was built during the winter to replace the old scow which was unfit for further service. Two small scows were also constructed for use on the Williamsburg canals. The boiler from the gate lifter was retubed and repaired. Various other smaller items of repair were also carried out on different units of the floating plant.

The beautification of canal grounds and the cultivation of plants in the greenhouse at Cornwall received the customary attention.

#### (d) FARRAN POINT CANAL

This canal, together with the Rapide Plat and Galops canals, which succeed it up-stream, form the group known as the "Williamsburg Canals". The length

of the Farran Point canal is 1.28 mile. It has one lock and is situated 5 miles west of the Cornwall canal.

The season of navigation extended from April 23 till December 11, and no serious delays were occasioned either through accident or other cause.

All four gates at lock 22 were taken out for repairs during the year and replaced by spare gates.

Owing to the abnormally high water which prevailed during the last navigation season considerable damage was done to banks and stone protection walls. The water continued high until November when it was found possible to make a few repairs; the rest of such repairs have been delayed until lower water levels again obtain.

#### (e) RAPIDE PLAT CANAL

This canal extends from the town of Morrisburg to Flag's bay, a distance of 3.89 miles. It is situated  $9\frac{1}{2}$  miles above the Farran Point canal and has two locks.

Navigation opened April 23 and closed December 11.

One pair of gates at lock 24 was removed and repaired being now held at the lock as spare gates.

Repairs were made to stone protection over a distance of 2,000 feet along canal banks. A small washout on the river side of the south bank has been temporarily repaired until lower levels occur.

A small garage was erected at the Superintendent's residence. The double garage at the canal shops was moved to a more convenient location and a concrete floor was laid in it; the inside of the building was sheeted and a chimney installed.

A concrete culvert 20 feet long was constructed under the roadway leading from the highway to the canal shops and the roadway straightened and improved.

Under contract with the Corporation of the Village of Morrisburg, an electric transmission line was erected for the lighting of the entire canal. The line will be in operation for the opening of navigation.

#### (f) GALOPS CANAL

Situated about  $4\frac{1}{2}$  miles west of the Rapide Plat canal, the Galops canal extends from the village of Iroquois to a point about  $1\frac{1}{2}$  mile above the town of Cardinal, a distance of 7.36 miles. It surmounts the last series of rapids met with between Montreal and lake Ontario, and has three locks, a lift lock at the easterly entrance, a guard lock at the upper entrance and a lift lock beside the guard lock for overcoming the Galops rapids only.

This canal was opened to Navigation on April 23 and closed December 11. It was operated without accident or delay to vessels during the entire season.

Twelve cast iron mooring posts were installed on the south side of the canal west of lock 28 at the upper entrance.

At lock 25 the old platform over the filling weirs was renewed. At the Beach powerhouse the timbers carrying the valve machinery for the regulating weir were renewed.

Considerable damage on account abnormally high water resulted along the south bank of the canal between lock 28 and the upper entrance the stone protection being completely washed away and large portions of the earth slope eroded. The necessary repairs were promptly attended to.

At Iroquois, the wooden floor of the fixed bridge over the headrace was renewed after a period of thirty year's service. The swing bridges at Iroquois and Cardinal were scraped and painted.

A concrete floor was laid in the cellar of the lockmaster's house at Iroquois. The watch-house at lock 28 was sheeted inside and generally repaired.

The Government ditch along the north side of the old highway west of Iroquois was thoroughly cleaned out for about a mile of its length. Along the

north side of the Government road at the east end of the village of Cardinal 400 feet of tile pipe was laid to improve subdrainage. The north approach to the Cardinal bridge was improved by the installation of two electric lights and six further lights were distributed along the length of the bridge. New posts and a traffic bar were also placed.

Under contract with the Beach Rural Electric Company of Iroquois, electric transmission lines were erected for the lighting of locks 27 and 28 and the approaches thereto at the upper entrance to the canal, a total distance of 1.4 mile. This lighting system will be in operation during the coming season.

The flower beds in the vicinity of locks and the small park at Iroquois were kept in good condition and presented their usual attractive appearance.

#### (g) WELLAND CANAL

Lakes Erie and Ontario, with a difference in level of 327 feet, separated by the Niagara Peninsula about 24 miles in width, were first united for purposes of inter-navigation by the construction of a small canal, between the years 1824 and 1829. This canal leaving lake Ontario at Port Dalhousie traversed half the width of the peninsula, *via* St. Catharines, Thorold and Allanburg, to Port Robinson from which point a connection was made *via* the Welland river to an outlet into the Niagara river at Chippawa, about two miles above the Niagara falls. During subsequent years up to 1850, this original canal was reconstructed and improved, a direct route from Port Robinson to an entrance to lake Erie at Port Colborne being substituted for the original circuitous channel *via* Chippawa and the Niagara river. Between 1875 and 1887 the portion of the canal between Port Dalhousie and Thorold was reconstructed on a new alignment and the remainder enlarged to provide a navigable depth of 14 feet throughout. This last canal remained in operation until the close of the 1929 season, a period of 42 years. An entire century has therefore elapsed since the completion of the first means of water communication between the two lakes. With the opening next month of another season of navigation, the Welland canal will cease to exist as a separate entity. A small section of it however (about 2½ miles between Merriton and Thorold) will remain in operation for a time, pending the completion of certain structures on the now almost completed ship canal.

The Welland canal, as formerly in operation, was 26.75 miles in length with twenty-six locks and under usual water conditions provided, like the St. Lawrence system, 14 feet of water on lock sills. It extended as already noted, from Port Dalhousie on lake Ontario to Port Colborne on lake Erie.

Navigation in the past fiscal year opened April 18 and closed December 11. The canal was operated throughout the entire season without serious accident or delay to navigation. A few minor interruptions to traffic however occurred.

On June 14 the steamer *Sarnolite*, upbound, had cleared lock 13 by a few hundred feet when the upper gates of lock 13, which were being closed, were slammed shut by a surge and one of them displaced. The replacement of this gate put lock 13 out of commission for a period of about fifteen hours. There was however practically no traffic in either direction during this time. On July 24 blasting operations on the Welland ship canal near Ramey's bend resulted in the deposit of a considerable amount of material in the navigable channel. Vessels were allowed to proceed after the obstructions deposited had been removed, the delay occasioned amounting to about seven hours. Owing to a serious leak which developed in the coffer dam separating the Welland from the new Ship canal at the regulating weir, it was necessary on July 30 and 31 to lower the lock 24 reach about five feet to facilitate the work of repairs. A delay of about twenty-eight hours was thereby occasioned to all vessels of heavy draught.

A total of 3,764 vessels passed through the entire canal, the upbound and downbound passages being nearly balanced. In addition to the foregoing,

289 trips were made by vessels to intermediate points, to which may be further added the recorded lockage of 180 pleasure craft and the passage of numerous scows engaged in construction work. The largest cargo to pass through the canal westbound was a shipment of 3,080 tons of pulpwood carried by the steamer *Newbrundoc*; the largest eastbound cargo was a shipment of 100,180 bushels of wheat of 3,005 tons. During the season a total of 4,769,866 tons was transported through the canal, a decrease of about 56 per cent from the record of the year 1928, the greatest in the history of the canal. Wheat shipments, in which commodity the greatest falling off was observed, totalled 1,684,545 tons as against 3,945,950 tons for 1928, a decrease of 2,261,405 tons or 75,304,786 bushels.

Improvements and repairs carried out during the year were of a minor nature. They included the installation and repair of spare gates at various locks, repairs to wing walls at locks 15 and 16 and the cleaning out and repair of lock chambers. The wooden floors of bridges 3 and 5 at Lake and Geneva streets were renewed, stone protection of canal banks was repaired at a number of points and various walls were repaired. The blacksmith shop at Port Dalhousie was resingled and the carpenter shop and Collector's office painted. Various units of the floating plant also received minor repairs including the derrick scow, pile driver, gate lifter, pontoons, ferry boat and various flat scows.

*Old Canal.*—The principal repairs carried out on the old canal were as follows:—The wooden deck of the bridge which spans the by-pass just east of lock 15 was rebuilt in reinforced concrete. Four other bridges were replanked. At lock 2 weirs the damage resulting from washout was repaired, ditches were opened or cleared of weeds and debris, and various canal buildings repaired.

*Feeder Canal.*—The swing bridge at Dunnville was repaired and the waste weir bridge at Byng. Banks were kept clear of weeds and slopes kept in good repair. Repairs were made to the ferry scow and approaches at Port Maitland.

*Port Colborne Elevator.*—During the past fiscal year the Government elevator received 36,297,606 bushels of grain, somewhat less than half the receipts of the previous year. This large decrease may be ascribed to generally depressed conditions in the grain market; similar fallings off in receipts were experienced at other grain elevators. Of the total grain received during the season 72 per cent was from Canadian ports and 28 per cent from United States ports.

The record of out-turn from the elevator for the year, or the amount of grain leaving the elevator as compared with that received, showed an average loss in handling of 0.0155 per cent, a figure practically in accord with that recorded for the previous year's operations.

No serious delays at the elevator, due to breakdown or other cause, were experienced during the year. A short circuit in the substation, due to a storm on April 1, resulted in the breakdown of one of the transformers and a shutting down of the elevator for four days, but as navigation had not opened the delay had no serious consequences. The total number of vessels unloaded and lightered was 124 as compared with 295 in the 1928 season. Delays to these vessels in excess of 24 hours amounted to 13,625 hours or an average of 109.9 hours per vessel. With the exception of a short congested period, these delays were caused entirely by the abnormal condition of the grain market.

At the close of last season's period of navigation there were 3,274,561 bushels of grain in storage in the elevator. Of this 54 per cent had been disposed of by the end of the fiscal year. The bulk of this grain was taken over by various Canadian milling companies and only 60,000 bushels exported.

Improvements carried out during the year have included the completion of the venting of the lofters wells, the installation of a complete system of fire alarm signals, the installation of bin inspection lights to replace extension lamps, the removal of Buffalo buckets and their replacement by Howe buckets, the replacement of the former telephonic system by a system of lofters starting signals and other minor undertakings.

*(h) WELLAND SHIP CANAL*

This work, which has been in progress since the latter part of 1913, is now far advanced and although all items of construction may not be fully completed for another two years, it is anticipated that the entire new waterway will be available for vessels of 20-foot draft in the late fall of 1930 or upon the opening of navigation in 1931.

The new ship canal leaves lake Ontario at the original mouth of Ten Mile creek, now known as Port Weller, about 3 miles east of Port Dalhousie, where a harbour of entry has been constructed, and follows an entirely different route from the present canal as far south as Allanburg. From here it proceeds in general along the line of the existing canal to a point about one mile north of the village of Humberstone, where another diversion, about two and one-half miles in length, is made to the east of the present waterway. The route of the present canal is then followed for the final half mile to the lake Erie entrance at Port Colborne. The total distance traversed from lake to lake is 25 miles. The difference in level between the two lakes, 327 feet, is overcome by seven lift locks, all of which are now practically completed, with lifts varying from 43 feet 8 inches to 47 feet 10 $\frac{3}{4}$  inches, and one guard lock of variable lift. The lift locks are 859 feet long between inner gates and 80 feet wide and provide a depth of 30 feet of water over the mitre sills. The width of the canal prism at bottom is 200 feet. For purposes of construction the route of the new canal has been divided into eight sections numbered in order from Port Weller southerly. The main construction operations of the entire canal have been performed under contract.

While during the war years and for some time after construction work was, through many causes, greatly retarded or entirely at a standstill, it has progressed during the past eight years in a very satisfactory manner.

Following is a brief account of the more important work carried out or still in hand on the various sections of the canal during the year just ended.

*Section No. 1.*—Commencing with the harbour works of Port Weller, this section extends in a southerly direction, a distance of nearly 3 miles, and comprises the harbour construction, prism excavation, one lock with weirs, one highway bridge over the canal, a gate yard, etc.

When work on the present contract with Johnston P. Porter (which included all general construction but that of the gate yard) was commenced in September, 1921, about 30 per cent of the entire undertaking still remained unfinished. For the past four years the principal work included in this contract has been practically completed. Various small operations have however been in progress such as the sodding of slopes and embankments, the macadamizing of areas adjacent to the lock, the reinforcement of harbour embankment slopes, etc.

In the spring of 1929 indications of a forward movement in both the east and west entrance walls of lock 1 became very apparent. To counteract this, transverse concrete reinforcing struts 4 feet deep were provided at each expansion joint and the remainder of the area paved with a concrete slab 2 feet thick. This work was completed last August and no tendency to a further movement of the walls has since been observed.

Final operations in connection with the completion of the gate yard were carried out during the year. All slopes between locks 1 and 2 have now been trimmed and sodded. With the exception of a few minor operations, all work on this section has now been completed.

*Section No. 2.*—The extent of this section is approximately 4 $\frac{1}{2}$  miles. The work involved has comprised the taking out of canal prism and construction of embankments, the building of locks 2 and 3 with entrance walls, etc., and of three highway bridges.

The work on this section has been prosecuted under the same contract as that of Section 1. Under the original pre-war contract about 58 per cent of the entire undertaking had been completed.

In April, 1929, an extensive slide occurred in the east slope of the prism over a length of 800 feet just north of bridge 4 on the Queenston highway. The work of removing the material and the restoration of the prism slope was carried out during the summer months. The complete cleaning out of the prism will be effected by dredging during the coming season.

A definite decision having been arrived at to transfer traffic for the 1930 season from the Welland canal between Port Dalhousie and the head of new lock 3 to the ship canal between Port Weller and this point, special efforts have been made to complete such items of work as were necessary to make this transfer possible. Until the close of last season's operations preliminary work only could be carried on. This consisted mostly in the excavation and completion of the prism south of the point of crossing of the Welland canal. On the close of navigation the prism of the old canal was unwatered in the area which traverses the line of the ship canal and during the winter both banks of the old canal were removed and excavation of the full prism on the new line practically completed. Work has also been carried out on those portions of the upper east and west entrance walls to lock 3 which lie south of the crossing of the two canals. Up to the present both walls have been completed to above regulated water level with the exception of a 70-foot gap left in the west wall across the line of junction with the old canal. This precaution has been taken in order that the Port Dalhousie route may remain for a time available for traffic. All work on the canal prism south of the upper entrance to lock 3 has now been completed to the end of Section No. 2.

Bridge 5 with its approaches was fully completed and opened to public traffic last September.

The work which has been performed on Section No. 2 can now be summarized as follows:—

Rock excavation and watertight embankments have been completed, earth excavation is 99 per cent completed and concrete work of all classes 99·9 per cent.

*Section No. 3.*—This section extends southerly from Section 2 for a distance of about 2 miles. The work involved, which since 1922 has with Section No. 4 been carried on under contract with the P. Lyall & Sons Construction Company Limited, has comprised the excavation of canal prism and lock sites, the construction of three twin locks in flight and one single lock, together with masonry approach walls, three bridges, a core wall for a dam, control weirs and other minor structures and the building of a large earth dam at the head of the flight locks.

In September, 1929, the Lyall Company went into voluntary liquidation. The work however has continued without interruption, having been carried on under the direction of the Receiver.

Excavation operations were carried on in the tail race tunnel of the power house at the lower entrance to the west chamber of twin locks 4, the work being completed by the end of October. The lower entrance was then cleaned up to final grade and the outlet ditch north from the tailrace tunnel completed before the close of the year 1929. During the last week of March of the present year excavation was resumed on the removal of the ramp along the west prism slope north of the lower entrance wall to twin lock 4. This work will be completed before the opening of navigation so as to permit of the flooding of the prism between the foot of the flight locks and lock 3. Rock excavation in the tow path roadway west of twin locks 4 and 5 was completed in December the excavated material being utilized as back fill between locks 4. The cleaning up of all debris in the twin locks and the removal of forms is now well advanced. Back filling in rear of the east wall of twin locks 6 has been finished and considerable work done on the back filling of the west wall. Final excavation operations in the prism between the head of the flight locks and lock 7 have been carried out during the year; little further now remains to be done beyond the removal

of a small quantity of material at the entrance to pond 6. The locks 6 pondage dam has been completed with the exception of about 2,800 feet at the easterly end.

All concrete work on the flight locks and their entrance walls has now been completed. The placing of concrete in the core wall of the dam west of the Welland canal crossing was completed. The bulk of the concrete slope protection has also been placed. Certain portions of this work however will not be entirely finished until 1931.

Since January 1 work on the weir at the easterly end of the pond 6 dams has been in progress. A considerable portion of the rock excavation has been completed and it is expected that the entire structure will be finished during the coming summer.

The back filling in rear of the east wall of lock 7 has been completed and the final trimming and sodding of the embankment will be completed early next summer. The west embankment has already been completed. During the past winter the final cleaning up of the lock chamber was carried out.

Work on the construction of the lock 7 weir was begun last August and thus far most of the excavation has been completed and the concrete work in the foundation and spillway floor. The balance of the work, including the excavation of the weir channel, will be carried to completion during the coming summer.

As it will be necessary to flood the upper entrance to lock 7 in April to provide for navigation, excavation operations were carried out in the intake to the stop log weir and wherever necessary over the whole upper entrance. This entire area has now been brought to finished grade.

The principal items of work still to be carried out on Section No. 3 consist in rock excavation in pond 6 and regulating weir 7, the removal of the temporary concrete piers of the Canadian National Railway diversion at bridge 6, earth excavation chiefly in pond 6 dam and regulating weir 7 and its channel, concrete work in pond 6 dam and the lock 7 weir and its supply channel and in the slope protection of the pond and supply channel.

The principal items of work performed to date on this section may thus be summarized:—Rock excavation, 99 per cent; earth excavation, 84 per cent; concrete of all classes, 96 per cent.

*Section No. 4.*—The extent of this section is about 2 miles southerly from the end of Section No. 3 or from the southerly end of the town of Thorold to one-third of a mile north of the northerly end of the village of Allanburg. The work involved has comprised excavation for canal prism and for foundations of guard gates and safety weir, the construction of Shriner's and Beaver Dams culverts, the relocation of a branch of the Canadian National Railways, the construction of two bridges, and various other lesser undertakings.

This section, as previously stated, is included with Section No. 3 under the P. Lyall and Sons Construction Company's contract.

Extensive excavation operations in the turning basin area north of the guard gate and safety weir could only be carried on after the unwatering of the Welland canal between locks 24 and 25. Following the close of the 1929 navigation season this work was resumed and carried on all the winter and is now within 10 per cent of completion. The balance can readily be finished up before this area has again to be flooded for the reopening of navigation next month.

All concrete work in the guard gate at the south end of the turning basin has been completed within the past year with the exception of a portion of the upper west entrance wall which was left unfinished to permit the passage of the dredge for the completion of excavation work south of the safety weir. The safety gate structure will be completed as soon as this dredging has been finished. Concrete work in the safety weir, immediately west of the guard gate, was completed last summer and after the close of navigation, with the exception of the

roadway deck. The forms for this are now erected and concrete will be placed in April.

The concrete wall for the Ontario Paper Company's dock, commenced in 1928, was completed last season and backfilling deposited. This work has been dealt with as a separate contract between the Paper Company and the general contractor.

During the summer of 1929 several shovels were engaged in a final cleaning up of the canal prism from south of the guard gate and safety weir to the end of Section No. 4. This work has now been completed with the exception of about 65,000 cubic yards on the west half of the prism which will be removed during the coming summer.

All trimming and sodding of slopes on the section has been completed with the exception of a small amount in the vicinity of the guard gate structure.

Following is a summary of the work performed on Section No. 4 to date:—Rock excavation, 98.4 per cent; earth excavation, 96 per cent; concrete of all classes, 98.8 per cent; watertight embankments, 100 per cent.

*Section No. 4B.*—This section, which lies immediately south of Section No. 4, includes a stretch of canal prism one-quarter of a mile in length. It is situated immediately north of the junction of the present canal with the route of the ship canal near the village of Allanburg. The work to be performed has consisted of prism excavation, the construction of water-tight embankments, and the building of a syphon culvert to carry the Davis creek under the canal. A contract covering this work was let to Johnston P. Porter, July 28, 1926.

During the summer of 1929 and until November, when this portion of the canal was flooded, very little excavation work was performed. Dipper dredge work was carried on through November until severe weather precluded the possibility of further progress. On the break-up in March these operations were again resumed. At the present time a channel about 100 feet wide has been excavated to within 12 feet of final grade making this portion of the prism available for 14-foot navigation in April.

Trimming and sodding operations and concrete slope protection along the prism slopes have been completed at the north end of the section. A small amount only of this work now remains still to be performed along the east slope at the south end of the section.

The work comprised in the general contract for the construction of this section is now about 80 per cent completed.

*Section No. 5.*—This section is about  $3\frac{1}{4}$  miles in length extending from Allanburg to Port Robinson. The work involved has comprised rock and earth excavation and dredging, the construction of two bridges, one at Allanburg and one at Port Robinson, and small quantities of concrete and stone protection along the canal banks.

The work on this section has been under contract with the Canadian Dredging Company, Limited, for the past eight years.

In March, 1925, work on this section had been discontinued, there remaining to be carried out the completion of the substructures of bridges 11 and 12 at Allanburg and Port Robinson, the removal of the two Welland canal swing bridges near the sites of the new bridges and dredging operations in the prism at these bridge sites. Work was resumed in June, 1929.

After the partial backfilling of the not-fully-completed abutments of bridge 12, a slight movement developed in these structures. To counteract this tendency it has been necessary to construct a concrete reinforcing slab or strut across the canal prism and below prism grade between the two abutments. This undertaking, which has been carried on under a Supplemental Agreement with the general contractor, has been completed with the exception of the central portion of the strut under the canal bed which will be laid after the removal of the pivot pier of the present swing bridge. All concrete work in the

abutments of bridge 12 was completed during the past year and backfilling deposited. The substructure of bridge 11 has also been fully completed.

The general contract work still remaining to be performed on Section No. 5 consists in the removal of the masonry substructures of the two old bridges with prism excavation at these points and, as already noted, the completion of the reinforcing strut at bridge 12.

Progress to date, of work performed under the main contract may be summarized as follows:—Rock excavation, 81 per cent; earth excavation 95 per cent; concrete work, 100 per cent.

*Section No. 6.*—This section extends from a point on Section No. 5, about one mile north of Port Robinson for a distance of approximately 5 miles southerly to Welland. The overlap on Section No. 5 became necessary on account of some silting which had taken place in the canal prism north of the original northerly boundary of Section No. 6. The work to be performed has included the dredging and enlargement of the present canal prism, the diversion of the Welland river, which crosses the line of the canal at the north end of the town of Welland, by means of a large syphon culvert of six 22-foot diameter tubes the construction of a highway bridge over the Welland river at Port Robinson, the building of watertight banks, concrete protection for slopes, etc.

A contract for the work on this section was awarded to the Atlas Construction Company, Limited and E. O. Leahey & Company, Limited, October 12, 1925.

A small amount only of Class 1, or rock excavation work, was performed during the year. This consisted mostly in the removal of boulders and masonry in the vicinity of the Welland aqueduct. Between Port Robinson and a point about two miles south, extensive dredging operations were carried on in the canal prism, the excavated material being used for the building up of the east embankment which was completed last September. An opening was then cut through on the west side between the ship canal and the Welland allowing the two waterways to assume the same or summit level. These dredging operations were carried down over considerable portions of the area of operations to the level of finished grade, in other parts to within 8·5 feet of this level. Dry excavation was also performed half a mile farther south and the material utilized both in the completion of the east embankment northerly from the syphon culvert and in the filling in of the abandoned channel of the Welland river. During the fiscal year, the total operations in earth excavation have comprised the removal of 1,673,000 cubic yards or approximately 70 per cent of the total prism excavation.

The completion of the east watertight embankment and further excavation of prism slopes throughout the section have made possible the carrying out of extensive operations in concrete and stone slope protection. Southerly from bridge 12 along the east slope, this work has been completed as far as the syphon culvert. The remaining slope protection was also placed on the west slope along that portion of the prism where the new line runs south of the old canal prism. Extensive operations were also carried out in the trimming and sodding of slopes, though considerable areas yet remain unfinished in the vicinity of the syphon culvert.

During the past season all work on the syphon culvert was completed and on September 6 the waters of the Welland river were diverted to the new channel from its former course through the Welland canal masonry aqueducts. The unfinished portions of the wing walls were all completed last season and the excavation of the intake and discharge channels. The diversion of the river rendered possible the employment of dredges in further excavation of the channel over the culvert and in the removal of those parts of the cellular coffer-dam which projected into the canal prism. This work will be continued during the coming season and will include the removal of the masonry in the old aqueduct. The

removal of all cells on the south, east and north sides of the coffer-dam was also effected last season.

The permanent intake of the Welland waterworks on the east side of the prism immediately north of the siphon culvert was completed between May and September 1929 and water admitted thereto.

As the city of Welland was desirous that the abandoned bed of the Welland river east of the old aqueduct should be filled in with the least possible delay, it became necessary before commencing this operation to extend the government drain a distance of 800 feet. All of this work had been completed last December.

The principal items of work thus far performed on Section No. 6 may be summarized as follows:—Rock excavation, 38 per cent; earth excavation in prism, 70 per cent; earth excavation at siphon culvert, 76 per cent, and concrete of all classes, 99 per cent.

*Section No. 7.*—This section, which is about 6 miles in length, extends from the city of Welland to the northerly limits of the village of Humberstone. The work to be performed, which since December 30, 1924, has been under contract with the Canadian Dredging Company, Limited, has included the dredging and enlargement of the prism of the existing canal to a point about one mile north of the end of the section, where the new line diverges from the old, the excavation of the new line from this point to the point where it crosses that of the Welland canal north of Humberstone, the construction of five bridges, the building of retaining and dock walls at both ends of the section, slope protection works, etc.

During the past year rock excavation operations have been carried on in the new prism just north of the crossing of the old and new lines near Humberstone. On the flooding of the lower entrance of lock 8 in July, the dredging of the previously blasted rock in this area was proceeded with and by September 8 a channel for 14-foot navigation had been completed. Traffic was then diverted to the new route. Further excavation of this area continued for the remainder of the 1929 season and through the succeeding winter months and will be carried to completion during the coming season. Earth excavation carried out during the year has completed this class of work with the exception of such prism excavation as still remains at the sites of bridges 13 and 18, a start on which will be made in April.

As a result of the lowering of the summit level when lock 8 was put in commission last September several slides have occurred in the east slope of the prism between bridge 16 and about  $3\frac{3}{4}$  miles south. It is estimated that on account of these slides additional excavation, amounting of about 250,000 cubic yards, will have to be undertaken.

Further stone protection has been placed on both slopes at points where concrete protection has not proved entirely satisfactory. The placing of the remainder of the stone protection on the east slope will be carried out after trimming has been completed. All slope areas have now been trimmed and sodded except along the east slope from bridge 16 south to the point where the old and new prisms diverge.

The construction of the retaining walls on both sides of the prism north and south of bridge 13 in the city of Welland has been proceeding during the year. The east wall north of the bridge was completed and one monolith south of the bridge. The west wall north of the bridge was completed to the end of Section No. 7; south of the bridge, work has also been proceeding and it is expected that both east and west walls will be wholly completed during the 1930 season. At the south end of the section both dock walls have been completed with the exception of about 350 feet of the east wall where it crosses the prism of the Welland canal. This portion is to be founded on concrete cribs and will be proceeded with during the coming summer.

The new Welland-Humberstone highway on the east side of the canal, completed in 1928, has been subjected during the past year to severe traffic. It has stood the test remarkably well. No tendency to heaving has been indi-

eated on any portion of the roadway. Such normal surface wear as has taken place will be repaired during the summer of 1930.

The work performed on Section No. 7 under the general contract may be summarized to date as follows:—Rock excavation, 88 per cent; earth excavation, 95 per cent; concrete, 91 per cent, and concrete slope protection, 100 per cent.

*Section No. 8.*—This section, which extends from the north end of the village of Humberstone to deep water in lake Erie, is about 3 miles in length. The work to be performed has consisted in the excavation of a new route from the north end of the section for a distance of about  $1\frac{1}{2}$  miles, the dredging and enlargement of the present canal for the remainder of the route, the construction of guard lock 8 with entrance walls, etc., the construction of a supply weir across the Welland canal on Main street, Humberstone, the dredging and deepening of the harbour and the building of an extension to the breakwater at Port Colborne, the construction of three bridges and numerous other minor undertakings. The main contract for this work was let in February, 1924, to A. W. Robertson, Limited.

At the beginning of the season of 1929, very little rock excavation remained to be done on the land division of the section. The unfinished items consisted in the removal of small quantities in the chamber of lock 8 and in the foundation trenches of its lower entrance walls and in a general cleaning up of the lower entrance. This work having been completed, the lower entrance, as before noted, was flooded in July. Included also under Class 1 excavation was the removal of the masonry arch over the closed weir channel on the west approach to bridge 21 to allow for the construction of the new concrete fixed span. At the end of the fiscal year practically the only unfinished rock work on the section was the taking out of the core between the Welland and Ship canals immediately north of bridge 20. This operation, involving the removal of about 25,000 cubic yards, will be carried to completion during the coming summer.

In the trimming of the areas in rear of the lock walls and upper and lower entrance walls to final grades, about 11,000 cubic yards of earth excavation was carried out last season. About 50,000 cubic yards of earth will also have to be taken out in the coming summer in the opening of the connection between the two canals north of bridge 20.

Considerable sodding work was carried out last season on the trimmed areas in rear of the lock and entrance walls. Such additional sodding as still remains will be completed during the coming summer.

During the months of April, May and June all concrete work on lock 8 and its entrance walls was completed. The completion of the west dock wall at bridge 21 was also carried out and by the end of 1929 all concrete work on the section, with the exception of the supply weir, had been finished.

The diversion of traffic from the old route at Port Colborne to the new channel and on through lock 8, which was accomplished last September, rendered possible the immediate commencement of construction operations on the supply weir on the line of Main street, Humberstone. As a preliminary undertaking, it was necessary to excavate a channel on the east side of the Welland canal prism, 600 feet long and 25 feet wide, around the site of the weir in order to secure a supply of water for the maintenance of the summit level north of lock 8 after the canal prism had been unwatered at the site of the weir. The construction of crib coffer-dams across the canal prism, above and below the site of the weir, was commenced in August, 1929, but owing to many difficulties encountered before these coffer-dams were made satisfactorily watertight, it was not until the following February that the interior area was successfully pumped out. Excavation for the weir foundation was then started immediately and by the end of March had been fully completed. The placing of concrete in the four westerly piers of the weir was begun early in March and carried on continuously by day and night shifts. Progress was so satisfactory that it will be possible to fully complete this end of the weir before the opening of navigation in April.

As it will then be necessary to use this end of the weir for supply purposes, additional crib coffer-dams were constructed running north and south from the two ends of the fourth pier to junctions with the original coffer-dams across the prism above and below the weir. The isolated channel thus formed on the west side will be opened for the supply and regulation of water to the summit level when lock 8 and the reach north of it are opened to navigation. The construction of the remainder of the weir will proceed in the dry area on the east side. In connection with the construction of the weir, it has been necessary to remove the Welland canal swing bridge on Main street, Humberstone. This was done early in February. Traffic has since been accommodated on a road diversion across the cribs of the south coffer-dam.

Work on the harbour and lake divisions was carried on during the entire season of 1929. In the harbour division drill boats were in operation on both the east and west sides of the channel between bridge 21 and a point about  $1\frac{1}{4}$  miles south. The season's work included the drilling and blasting of about 40,000 cubic yards with a balance of about 35,500 cubic yards, west of the centre line, still to be done. The work of excavation in the harbour area was carried on by two dredges. For a distance of 2,000 feet south of bridge 21 the entire area east of the centre line was excavated to final grade, this work having included the removal of the east harbour wall of the Welland canal. The work of stripping the earth overlying subaqueous rock was also carried on in dredging operations in the same vicinity. Of this class of dredging there still remains about 81,000 cubic yards to be taken out in the west half of the harbour during 1930. In the lake division drilling and dredging operations were carried on over the west half of the area. A balance of 5,000 cubic yards only remains to be removed to complete all rock excavation outside the harbour limits.

The water level of lake Erie at Port Colborne during 1929, averaged 0.1 foot higher than the average of the year before. The highest monthly average for 1929 was for the month of May for which period the mean level was 574.3. The lowest monthly mean was 572.0, recorded for the month of February.

Progress on Section No. 8 for work performed on the general contract to the close of the fiscal year is as follows:—Rock excavation, 91 per cent; earth excavation, 90 per cent; concrete work, 97 per cent and steel sheet piling, 100 per cent.

*Construction Railway.*—The Construction Railway continued in operation throughout the year. The volume of traffic, as indicated by the number of cars handled, was nearly double that of the previous year. This increase can be accounted for by the increased movement of departmental materials to the various locks and by the transportation of large quantities of excavated rock from Section No. 3 to Port Weller for the protection of the west embankment. Tracks, equipment and buildings were maintained in good order and 12,000 feet of new track was laid on the west harbour embankment at Port Weller. No serious accidents occurred during the year either to employees or equipment. The total number of cars handled was 15,816.

*Bridges.*—The progress of construction on the substructures of the various bridges which traverse the route of the canal has already been dealt with in this and in previous reports under the different sections on which these bridges are situated, all bridge substructures having been included in the general contracts. The erection of bridge superstructures has been carried out under various separate contracts most of which are now completed. With the exception of bridge 12, a contract for which has not yet been let, all of the twenty bridges which cross the canal are now either completed or well advanced. Bridges 1, 3, 4, 5, 7, 8, 10, 11, 14, 15, 16, 17, 18, 19, 20 and 21 are fully completed and in operation. A contract for the erection of bridge 6, a double 80-foot leaf rolling-bascule span for double-track railway traffic, was let to the Hamilton Bridge Company in March, 1929. At the end of the fiscal year all the steelwork had been erected and the riveting so far advanced that it is expected that the bridge will be ready

for operation by the end of April. Bridge 9, an 80-foot single-leaf span of the rolling-bascule type for the accommodation of highway traffic, has, since July 1929, been under contract with the Hamilton Bridge Company. This bridge is now practically completed with the exception of the installation of electrical operating machinery and the making of final adjustments. The erection of bridge 13 has been under contract with the Dominion Bridge Company since October, 1928, but active construction operations did not begin until one year later. This bridge, a 200-foot vertical lift span for highway traffic, on the line of Main street, Welland, is now practically completed and ready for trial operation. It is expected that a contract for the erection of bridge 12 will be let during 1930 for completion by the opening of navigation in 1931. It will, like bridge 13, be a 200-foot vertical lift span for the accommodation of highway traffic. Six of the twenty bridges, Nos. 6, 8, 10, 15, 17 and 20, are for railway traffic; the remaining fourteen are highway bridges. It was decided in 1928 that bridge 2, originally proposed as a highway crossing between locks 1 and 2, would not be constructed.

*Steel Lock Gates.*—During the past year the Steel Gates Company have completed all work on the various lock gates, the spare gates, the gates at the entrance to the gate yard, and the guard gates. Such work as still remains to be carried out under this contract consists in the application of safety castings at some of the gates and the completion of the painting. The gates for locks 1, 2, and 3, for the gate yard entrance for twin locks 4, for lock 7, the guard gates and those for lock 8 have been fully completed and are available for operation during the coming season of navigation. At the remaining locks a few small details are still unfinished.

*Gate and Valve Machinery.*—Progress on this work, which has been under contract with the Montreal Locomotive Works (their agents the Harland Engineering Company supplying the electrical equipment) has been very satisfactory. This contract includes the manufacture and supply of machinery for the operation of the gates and taintor valves of the locks, for the operation of the stoney valves in the regulating weirs of locks 2 and 3, and for the operation of the taintor valves in the supply and safety weirs and in the regulating weirs of pond 6 and lock 7. With the exception of four motors for the gate and valve machines for the west chamber of twin locks 6 and about half the equipment for the safety weir at Thorold, all deliveries on this contract have been made. The manufacture of the remainder of the material is well advanced and delivery is expected early during the coming summer.

The installation of gate and valve machinery was carried out by departmental forces as this machinery was received. At the close of the fiscal year all lock gate and valve operating equipment had been installed at all lock structures, including the guard gate, with the exception of two gate operating machines at twin locks 6. It is expected that all these installations will be completed by the end of June next. Operating machinery was also installed at the regulating weirs of locks 2 and 3 and a start made at the safety weir.

*Taintor Valves.*—A contract for the supply of the twelve taintor valves for the safety weir at the Thorold guard gate was awarded to the Horton Steel Company in 1928. Complete deliveries had been made well in advance of the time when these valves were required for installation. The Horton Steel Company were also awarded in 1929 the contract for the supply of the ten taintor valves required for the supply weir at Humberstone, two valves for the regulating weir of lock 7, one for the regulating weir of pond 6 and six spare valves for replacement purposes. All this equipment had been provided prior to the time its installation in the structures could be proceeded with.

The Department's forces also carried out the installation of taintor valves and during the past year this work has been completed at all lock structures. Five valves at the east end of the safety weir at Thorold were also installed;

the remaining seven are assembled and riveted and will be installed before the opening of navigation. At the supply weir at Humberstone a start has been made on the assembly and riveting of the ten taintor valves to be installed in this structure. It is expected that three of the valves will have been installed ready for operation at the west end of the structure for the supply of water to the summit level before the opening of the canal to navigation in April.

*Buildings.*—Active operations were carried out during the entire year by the Department's building construction force and in all forty-one of the permanent buildings, were completed. At the flight locks all buildings have been completed with the exception of the two buildings for the housing of machinery required for the operation of the east leaves of the upper gates of the east chamber of twin locks 6. At lock 7 the intake valve building and the gate and valve machinery buildings for both walls with the control building at the north end were completed in 1929. At the south end of the west wall the penstock control valve building was also completed finishing all building construction at this lock. At the guard gate at Thorold the substation and control building and gate machinery building were completed. At lock 8 two gate machinery buildings and three valve buildings were completed finishing all the required buildings at this lock. Construction has also been started on the administration building at Port Colborne; the completion of this building is expected about the end of May. In previous years the buildings at locks 1, 2 and 3 were entirely completed and made available for machinery installation. Early in March of this year the construction of the administration building at Port Weller was put under way. It will be completed and available for occupation at the opening of navigation in April.

In October 1929 a contract was entered into with Messrs. Aiken, Innes & MacLachlan of St. Catharines for the construction of the substructure of a power house to be located on the west side of the canal at the foot of twin locks 4. Construction work has been in progress ever since and is now rapidly nearing completion. About 1,500 cubic yards of concrete still remain to be placed, after which the erection of the superstructure of the building will be proceeded with by departmental forces. The three 5,000 h.p. hydraulic turbines for this building are to be supplied by the S. Morgan Smith-Inglis Company and will be installed during the coming summer. Three 5,000 h.p. electric generators with auxiliary equipment will be furnished by the Canadian General Electric Company.

*Electrical Equipment.*—The permanent transmission line has now been completed except between bridge 5 and the guard gate, a short distance on Section No. 4B and another short stretch on Section No. 6, the total length of uncompleted line being about 2.75 miles. The progress of the work has been such that power will be available at the flight locks and at lock 7 about the end of May 1930.

The erection of lighting fixtures for the illumination of the canal reaches has been proceeding during the past winter and this work is now 90 per cent completed. The remainder of the fixtures will be in place at the opening of navigation. The lock areas will be equipped with ornamental lighting fixtures. These have now been installed at locks 1, 2 and 3, at the guard gate and at lock 8. Those for the flight locks and lock 7 will, it is anticipated, be in place by the end of June next.

Substation electrical equipment, consisting of transformers, disconnecting switches, lightning arresters, etc., has been installed at all points except at bridge 12, where the material has already been delivered.

The installation of power and control cables has also been rapidly pushed forward and the only points at which this work is now not fully completed are at twin locks 6, and at the safety weir and guard gate. Installation at the twin locks should be completed by the end of June and at the safety weir so soon as the contractor's operations permit.

Control desks, which have been supplied under contract with the English Electric Company, have been installed at all locks except at the flight locks.

During the past year the department's forces have completed the erection of the 12,000-volt transmission line from Killaly street, Port Colborne south to the undercrossing at bridge 21 and have installed the submarine cable under the canal prism. The installation of a local intercommunicating telephone system at locks 1, 2 and 3 and at lock 8 has also been carried out. This telephonic equipment will not however go into operation until August next after the delivery of the necessary automatic control switch-board. Meantime communication is being carried on between the various canal structures by the installation of Bell telephones.

With the exception of electrical equipment yet required for the power house at twin locks 4 and its transformer station, practically all the electrical equipment required for the canal is now on order or has been delivered.

*Laboratory.*—Owing to the advanced stage of construction operations on locks, walls and other structures there was a marked diminution in the quantity of cement received and tested during the past year. A total of 241,000 barrels was received and of this none was rejected after tests had been made. Tests were also made of concrete, taken from each of the contractors' concreting plants, in accordance with the requirements of the American Society of Testing Materials, the results obtained fully indicating that all requirements of the specifications had been met. Haydite concrete, the use of which for bridge floors was referred to in last year's report, has proved entirely satisfactory. This material shows an increasing compressive strength with age. Tests were also made of various methods of securing watertight concrete, of methods of producing a concrete of high specific gravity for counterweight purposes and of various building materials such as sand and gravel, paints, anchor bolts, etc.

*Forestry Work.*—The extensive operations in the planting of trees and shrubs for the protection and ornamentation of canal banks and lock areas, which have been going on for some years past, were continued in 1929. Trees developed from seed in nurseries at Port Weller were transferred to transplanting beds and cuttings from the Ontario Forestry Departments placed in permanent locations along the canal zone as well as trees, previously developed to suitable size in the Port Weller area. It is estimated that a total of 500,000 trees of all native varieties have now been set out along the canal. In addition to forestry operations proper, a greenhouse was, last year, erected at Port Weller for the cultivation of plants to be used for the beautification of the lock areas.

*Miscellaneous Contracts.*—In December 1929 a contract was entered into with the Collingwood Shipyards Limited for the construction of a gate lifter. The hull of this gate lifter is now about 85 per cent completed. The fabrication of the necessary machinery is being carried out by the Canadian Allis-Chalmers, Limited, as agents of the contracting firm and of the electrical equipment by the Canadian Westinghouse Company. The completion of the work is called for by August 15, 1930. Among extensive orders for materials may be mentioned the supply of lead-sheeted cable by the Eugene F. Phillips Electrical Works Limited, of steel towers by the Canadian Bridge Company and of lighting standards by the Canadian Line Materials.

*General Summary.*—For the principal items of work involved in the construction of the entire canal, the estimated quantities on the final completion of the work and the percentages of these totals now completed are as follows:—

Rock excavation.....	9,069,000 cu. yds.	93 per cent
Earth excavation.....	51,193,000 cu. yds.	91 per cent
Concrete.....	3,509,000 cu. yds.	98 per cent
Watertight embankment and puddle.....	4,921,000 cu. yds.	99 per cent
Reinforcing steel, spikes, bolts, etc.....	36,972,000 lbs.	95 per cent
Steel sheet piling.....	55,363,000 lbs.	97 per cent

## (i) SAULT STE. MARIE CANAL

This canal provides communication between lakes Huron and Superior, surmounting by a single lock the rapids of the St. Mary river. It is 1.38 miles in length between the east and west extremities of the entrance channels and under usual conditions provides a minimum depth of sills of 18 feet 3 inches.

The canal was opened for traffic on April 14 and closed December 14. The total registered tonnage of vessels which passed through the lock was 4,876,832 an increase of 6.3 per cent over the previous year. In total freight tonnage there was an increase of 18 per cent over that recorded for the previous year. For the Canadian and United States canals taken together, the registered tonnage showed an increase of 2.1 per cent and freight tonnage of 6.5 per cent. Traffic in Canadian vessels through both canals showed a decrease of 22 per cent both for registered and for freight tonnage. The total number of vessels which passed through the Canadian lock was 3,585 as compared with 3,358 during the 1928 season.

Three accidents occurred during the season. On June 26 the steamer *W. G. Pollock*, entering the lock downbound became grounded on the shoal behind the west pier. After part of her cargo had been lightered she was drawn off by two tugs, a delay of about nineteen hours having been sustained. No damage resulted. On October 31 a small amount of damage was done to the railing and bridge timbers of one of the lock gates when the fender rope of the steamer *Manitoba* became entangled in the bridge railing. On December 1 an accident occurred which put the lock out of commission for thirty-nine hours. The auxiliary gates were being operated in place of the lower main gates. When the south gate had swung about fifteen feet from the lock wall the two steel anchor bars broke due to the pressure of the revolving gate against an accumulation of ice between the gate and the curved face of the hollow quoin. The fracture of the anchor bars allowed the toe of the gate to drop to the bottom of the lock. During the repairing and resetting of the gate all traffic was diverted to the American canal.

Repairs and improvements carried out during the year included the rebuilding of the tops of the upper entrance walls between the movable dam and the upper piers and the scraping and painting of the steelwork in the movable dam and renewal and creosoting of the timbers between the wickets.

The dredging of the harbour by the Department of Public Works, commenced in 1927, was continued last season. The lower entrance, east of the Algoma Central Railway dock, was completed, making the depth the same as in the channel of the St. Mary river. The depth of the channel west of the dock remains, as before, one foot deeper than the sill of the lock.

High water conditions of the past few years were maintained and the water continued to rise. The average water level in the lock was seven inches higher than that of the previous season, twenty-three inches higher than in 1927 and thirty-nine inches higher than the level of 1926, the latter being the lowest on record. Present indications suggest that the peak has been passed as the present level is below that of a year ago.

## 2. OTTAWA AND RIDEAU RIVERS

## (a) ST. ANNE LOCK

This canal surmounts the St. Anne rapids between Ile Perrot and the island of Montreal at the junction of lake St. Louis with the Ottawa river. It consists of two parallel locks, the old and the new each with a lift of 3 feet. The old lock (now disused) has a depth of only 6 feet, but in the new lock there is 9 feet of water on the sills.

Navigation opened April 25 and closed November 30. There were no accidents or delays to traffic during this period.

The total lockages for the year amounted to 5,337 as compared with 5,664 in the 1928 season. The tonnage represented by this traffic amounted to 525,250, an increase of about 9 per cent on the record of the year before.

Of repairs and improvements carried out during the year the following may be noted.

The last of the six piers on the northeast side of the upper entrance, originally of stone-filled crib construction, which since 1927 have been in process of renewal in concrete from water line up, was completed last summer. This final pier is 14 feet square. The original timber crib, demolished to about one foot below low water, has been surmounted by a concrete crib 12 feet in height, and the stone filling replaced. A ladder runs up the side of the pier and a bollard is set in the concrete wall.

A new store house with brick walls and concrete foundation, 32 feet by 24 feet, was erected next to the Overseer's house.

The four gates in the new lock were scraped and painted and the lock chamber cleaned by a diver.

The north masonry wall of the lower entrance, on a length of 20 feet, was renewed to one foot below low water and the joints in both north and south walls were repointed.

Repairs made to various buildings included a new chimney for the kitchen of the Superintendent's residence, the painting of the sheds and old store house, and improvements to drainage of Statistician's residence.

The derrick scow was caulked and painted and small repairs made to other units of the floating plant.

#### (b) CARILLON AND GRENVILLE CANALS

From the St. Anne lock to the foot of the Carillon canal there is a navigable stretch of water 27 miles in length through the lake of Two Mountains and the Ottawa river. The Carillon canal, which is 0.94 mile in length with two locks, giving a total lift of 14 feet, surmounts the next rise in the river level produced both by the Carillon dam at the head of the canal and the natural fall of the river below.

The Long Sault rapids, 6 miles above the Carillon canal, are surmounted by the Grenville canal 5.94 miles in length, with five locks. Both canals provide a depth of 9 feet of water over the lock sills.

These canals were opened to navigation May 1 and closed November 30. No accidents occurred to delay traffic nor was any damage done to canal structures.

The number of vessels which passed through these canals during the 1929 season was 891 a figure practically the same as for the previous season. The total tonnage of merchandise was 135,814 an increase of 16 per cent on the record of the previous year.

Repairs and renewals to the Carillon dam have been in progress since September, 1927. A break on the Pointe Fortune side of the river necessitated the rebuilding of the dam for a length of 105 feet. On the Carillon side a break in the dam had also occurred repairs to which have been in progress for the past three seasons. These were fully completed during the summer of 1929. To effect these repairs it was necessary to unwater the dam for a length of about 150 feet. The most seriously damaged portion, 130 feet in length, has been completely rebuilt while portions at either end of it, aggregating 60 feet in length, have been extensively repaired.

A new pair of lock gates was constructed in the carpenter shop at Carillon and a flat scow was built 60 feet by 20 feet, for use on canal work.

At the Superintendent's lodging an artesian well was sunk to a depth of 127 feet. Water has been piped to the house and a bathroom and other conveniences, including a system of hot water heating, installed. Hardwood floors

were laid in both stories and a concrete floor in the cellar. The building was also repainted and papered. In the carpenter shop a portion of the floor was laid in concrete, a small office was built for the foreman and a saw table and new carriage for the large planer installed. In the blacksmith shop an anvil on concrete foundation was installed. A number of lesser repairs were also made to various other canal buildings.

Of the floating plant, the hull of the tug *Shirley* was patched and caulked, the cabins and stairs were repaired and a new crank shaft and screw was installed. The hull of the gate lifter was caulked, patched and painted. Six flat scows and a number of row boats were also caulked, painted and generally repaired.

### (c) RIDEAU CANAL

This canal connects with the Ottawa river about 56 miles above the head of the Grenville canal and provides a waterway between the cities of Ottawa and Kingston. It consists of a series of natural watercourses joined by artificial cuttings, is 126.25 miles long and has forty-seven locks with a minimum depth of 5 feet over the sills. It rises by thirty-three locks to a summit in the upper Rideau lake, from which body of water it descends by fourteen locks to the level of lake Ontario. A subsidiary canal  $7\frac{1}{4}$  miles in length known as the "Tay Branch", connects the town of Perth with the north end of the lower Rideau lake. Its minimum depth is 5 feet.

Navigation opened, both at Ottawa and Kingston Mills May 1 and closed at Ottawa, November 30, and at Kingston Mills November 22.

During the past year an ample supply of water was available for the navigation of all parts of the canal.

The total number of vessels making use of the canal was 10,024 of which 9,263 were pleasure craft. The total tonnage of merchandise transported during the season amounted to 64,861, a decrease of 19 per cent from the record of the previous year.

The spring freshet of 1929 was normal and no damage was experienced. Such flooding as occurred was due to ice jams between Hogsback and New Edinburgh.

The principal repairs and improvements effected during the year have included the following:—

At the Ottawa flight locks the old masonry of lock 5 was taken down and the lock rebuilt with concrete blocks. The stone coping of lock 3 was replaced by a concrete coping. The construction of concrete walls along the canal banks through the city of Ottawa, which has been in progress for a number of years, was continued during the past winter. Three stretches of wall were built, 3,700 feet southerly along Echo drive from Pretoria avenue bridge, 600 feet from Bank street bridge towards the Ottawa Motor Boat Club house and between Bronson avenue bridge and Dow's lake, on the north side, a distance of 660 feet, or an aggregate length of 4,960 feet. With the closing of a gap of 2,750 feet which still remains, this work will be fully completed between the Plaza bridge and Dow's lake.

At Hartwell's locks one pair of gates was replaced. Under contract with the Dominion Bridge Company the former wooden bridge over the waste weir was replaced by a steel structure with concrete floor.

At Hogsback locks one new pair of gates was installed. The old steel bridge over the upper lock was replaced, under contract with the Dominion Bridge Company, by a new plate girder span with 18 foot roadway.

At lock 15, Long Island, the entire rebuilding of which had been in progress in the previous year, the work was completed by the construction of a 2-foot concrete coping and the canal grounds were completely cleaned up.

The three spans of the steel bridge at Beckett's Landing were removed during the winter and the crib piers rebuilt from low water. The spans were then replaced and the entire timber deck renewed.

The timber waste weir at Burritt's Rapids dam was rebuilt in concrete and the rebuilding of the lay-by pier below the lock completed.

At Nicholson's Locks a complete new wooden deck was laid on the swing bridge.

Over the waste weir at Clowes' Lock the stringers and flooring were renewed and the railing and winch bearers.

At Old Sly's lock station a new pair of gates was erected.

At the waste weir in the basin at Smith's Falls the old timber dam was rebuilt in concrete.

A new pair of gates was erected at Beveridge's lock station, a new floor was laid on the waste weir at dam 19 and the dry walls at the swing bridge and above lock 33 were rebuilt in concrete.

On the Tay branch the crib wharf on the north side of the basin at Perth was taken down and rebuilt for a length of 303 feet and the width of the wharf reduced from 12 to 8 feet. Repairs were also made to the rest pier of the Craig street bridge.

At Newboro lock a concrete cistern was constructed in the cellar of the lock house to replace the former wooden tank.

A new plank floor was laid on the waste weir at Chaffey's lock and various other minor repairs attended to.

At Davis' lock a new plank floor was laid on the waste weir and new winch carriers erected. A new pair of lock gates was framed and will be hung before navigation opens.

At Jones' Falls one new pair of gates was erected and a new floor laid on the waste weir of Morton dam. The superstructure of bridge 34 was rebuilt.

General repairs were made to the timber substructure of the Brass Point bridge and the swing span adjusted.

A new plank floor was laid on the swing bridge at Brewer's Upper Mills, the roof of the storehouse shingled and the lockhouse relined with beaverboard. At the lower mills a small guard wall of concrete was built at the east side of the swing bridge as a protection to vehicles approaching at night.

At Kingston Mills a concrete coping was added to the wall on the north side of the basin. Along the westerly embankment the dry wall, which through wave action had become delapidated, was taken down and rebuilt on a length of 2,200 feet. A concrete cellar wall was constructed under one of the lockmen's houses.

The floating plant of the canal consisting of tugs *Loretta* and *Agnes P.*, dredge *Rideau* and two side-dumping and three flat scows was employed during the season at various points. The dredge *Agnes P.* and scows were first utilized along the sites of the new walls, erected in the previous winter at Ottawa, in removing earth and various debris thrown into the canal and afterwards, in placing clay in front of the dams at Hogsback and Black Rapids. The fleet then moved to Long Island and cleared up the accumulation in the river resulting from the construction of the new lock. At Burritt's Rapids, clay was placed at the coffer-dam erected for the unwatering of the waste weir. The *Loretta* was employed in the setting out, replacing and painting of spar buoys along the channel, in towing scows, delivering stores and for inspection purposes. A new flat scow was constructed during the winter, 85 feet by 26 feet, to replace one no longer fit for service.

### 3. RICHELIEU RIVER NAVIGATION

#### (a) ST. OURS LOCK AND DAM

At a point on the Richelieu river, 14 miles above the town of Sorel, the level of that river has been raised 5 feet by a dam. This difference in level is overcome by the St. Ours lock. There is 7 feet of water on the upper lock sills,

but the depth of water on the lower sill is governed by the level of the St. Lawrence river having been as low as 5 feet 1 inch in October, 1895.

The lock was opened to navigation May 1 and closed November 30.

There were no accidents or delays to navigation.

A total of 966 vessels passed through the locks of the Richelieu river canals during the 1929 season, a slight decrease from the record of the previous year. The total tonnage transported amounted to 123,077 a decrease of about 30 per cent from the previous year's figures.

A contract for the construction of a new lock, to be situated immediately east of the present lock was awarded in November last to the Robertson & Janin Contracting Company. The new lock will be 339 feet long between service gates by 45 feet wide and will provide for a minimum of 12 feet of water on the sill of the lower gate. Preliminary to the work of the contract, eighteen guide piers at both ends of the present lock have already been demolished and removed by the dredging fleet and the site of the new lock cleared of trees and brush. Active construction operations will be started next season.

Such repairs or improvements as were carried out during the year were of a minor nature only and included repairs to gates and booms, the caulking and painting of scows and the usual attention to canal grounds.

#### (b) CHAMBLY CANAL

Between the St. Ours lock and Chambly basin, a distance of 32 miles, the river is navigable with a depth of 7 feet. The Chambly canal, which enters at this point, is 11.76 miles in length and has nine locks. It surmounts all the rapids between Chambly and St. Johns, thus establishing communication with lake Champlain. The locks, nine in number, provide a depth of  $6\frac{1}{2}$  feet of water over sills.

The canal was opened to traffic May 1 and closed November 30.

There were no accidents or delays to traffic.

The following improvements were carried out at St. Johns. At the west end of the Canadian National Railway bridge portions of the river wall, 100 feet at the north end of the bridge abutment and 175 feet at the south end, were rebuilt. The existing crib was taken down to below low water, a concrete wall constructed on it and the space in rear again back filled with stone. Between St. Charles street and a point about 1,200 feet north, the canal wall, parallel to Richelieu street, was rebuilt in timber crib construction from canal bottom level. A foundation crib, stone filled, 12 feet wide and extending to 2 feet below low water was first constructed. On this was built a second crib 8 feet wide filled with earth, the total height of the two cribs being 15 feet.

At Chambly the east side and north end of the timber crib guide pier at the entrance to the lock was rebuilt for a length of 605 feet. The face of the cribwork having been removed to a point a little below low water, a concrete wall 10 feet high was constructed on the cribwork foundation to form a new face and afterwards back filled with stone to restore the level surface of the pier.

Of smaller repairs and improvements the following may be noted:

General repairs were made to various bridges which traverse the canal. Bridges 1 and 2 were scraped and painted and on seven other bridges the floor planks were renewed.

At Chambly Canton the old wooden wharf on the west side of the canal was replaced by a concrete wharf.

Small repairs were made to the Superintendent's residence, the carpenter and machine shops, lock masters' and bridgemasters' residence, etc.

A new hull was constructed for the tug *Chambly* and the boiler and engine from the former tug installed therein. New fenders were provided for the dredge and repair scow. The hull of the steam derrick was caulked and painted and two new anchors provided.

## 4. LAKE ONTARIO TO GEORGIAN BAY

## (a) MURRAY CANAL

This canal, an open waterway 5.15 miles long, 80 feet in width with 10 feet depth at low water across the isthmus of the Prince Edward County peninsula connecting the bay of Quinte with lake Ontario and is without locks.

Navigation opened April 20 and closed November 29. No delays, due to accident or other cause, occurred during the season.

The principal repairs found necessary during the year were as follows:—

Canal banks were maintained in good order and all ditches kept clear of weeds, brush and refuse. The highway on the north bank was dragged and re-gravelled where necessary.

A new platform was built at the Canadian National Railway bridge and two new home signals installed.

A concrete foundation was placed under the Trenton Road bridge watch-house.

The canal scow was rebuilt and launched.

## (b) TRENT CANAL

The route of the Trent canal, as now in operation, lies between Trenton, on the bay of Quinte, where direct connection is made with lake Ontario, and Port Severn, on Georgian bay, from which the waters of the Great Lakes are accessible. The canal is made up of a series of lakes and rivers connected by relatively short lengths of artificial cuttings. Connection between the water levels of the various reaches is effected by locks, except at Swift Rapids and Big Chute where marine railways are employed. The through route may be briefly described as follows:—Between Trenton and Rice lake the canal follows the line of the Trent river. Passing through Rice lake, it enters the Otonabee river, the route of which is followed to its source in Katchiwano lake. From this lake the line of the canal passes in succession through Clear lake, Stony lake, Lovesick lake, Buckhorn lake, Pigeon lake, Sturgeon lake and Cameron lake to the west side of Balsam lake. From here connection is made by an artificial cutting with Mitchell lake about two miles westward, and from the latter lake another cutting makes connection with Cranberry lake. From the south end of Cranberry lake connection is made with lake Simcoe by another artificial cutting. Passing through lake Simcoe the route of the canal continues to the Severn river, the line of which is followed to the Georgian bay outlet at Port Severn. From Trenton the canal rises to a summit at Balsam lake, the level of which is about 595 feet above that of lake Ontario. From Balsam lake to Georgian bay there is a fall of 260 feet. The total length of the route from lake to bay is about 240 miles. It is made up of two main divisions; the Eastern division between Trenton on lake Ontario and the outlet of lake Simcoe and the western division from lake Simcoe to Georgian bay.

*Eastern Division* (lake Ontario to lake Simcoe).—This division includes, in addition to the main route of the canal, (about 182 miles) the Scugog branch, 35 miles in length, from Sturgeon lake to Port Perry *via* the Scugog river and lake, and various other navigable channels aggregating in all about 58 miles. The total extent of canal and canalized waters maintained in operation on this division is therefore about 240 miles. There are forty-two locks and lock structures, two of which are hydraulic lift locks, eight guard locks, forty-seven bridges, seven emergency dams, forty lockhouses, thirty watch-houses and twenty-four storehouses. Included also under this division are various reservoir lakes and dams thirty-six in all. Fifty-two of these dams were taken over from the Ontario Government in 1905 under Order in Council and have since been maintained and operated by the department. Of the total of these reservoir dams twenty-eight are concrete structures and the remaining thirty-eight timber.

Among the principal works carried out during the past year the following may be noted:—

The six dams between Nassau and Lakefield, originally of stone-filled crib construction, have, since the summer of 1920, been in process of gradual replacement by permanent concrete structures. Four of these dams had been built up March 1929. That at lock 25, about  $1\frac{1}{2}$  mile south of Lakefield, was commenced in July last, under contract with the Detroit River Construction Company, and is now about one-third completed. The new dam is situated 30 feet below the old one. Its length from face to face of abutments will be 230 feet with an average height of about 25 feet. There will be nine piers with nine sluices 20 feet wide and one log sluice 8 feet wide. Up to the present the easterly abutment, four piers and portions of the breast wall and platform have been completed. It is expected that the entire structure will be finished and the old dam removed by the end of the coming season. With the completion of the lock 25 dam, there will remain for replacement only the dam at lock 22. Two schemes in connection with this are now under consideration.

The work of renewing various timber dams at reservoir lakes, which has been proceeding for many years past, was continued. At the outlet of Grace and Dark lakes, in the township of Monmouth, the existing dam was reconstructed in concrete, the new dam being 176 feet long over all. At the outlet of Farquhar lake, in the township of Harcourt, a tributary of Grace lake, a concrete dam 85 feet over all was constructed replacing the former timber dam. A third concrete dam was constructed at Mud lake, which lies immediately north of Hall lake in the township of Stanhope. The overall length of this dam is 209 feet. The dams at Crab lake and Trout lake were reconstructed in timber and extensive repairs were made to timber dams at Eel lake, Bass lake, Big Marsh and Percy lake and minor repairs to nine other reservoir dams.

During the summer of 1929 and winter of 1930 the concrete aprons below locks 39 and 37 were extended.

At Harwood, on the south side of Rice lake, the superstructure of the wharf was rebuilt. The old piles were recapped, top planking renewed and the approach to the wharf reggraded.

Provision has been made at Peterborough of a plant for the construction and repair of lock gates. Concrete foundations were laid for the reception of the mill removed from Trenton. The entire building has now been erected and the necessary machinery and electrical equipment installed.

The floating plant of the canal, consisting of Dredges *Fenelon* and *Auburn*, tugs *Bessie Butler*, *Bob Hall*, *Harwood* and *J. B. McColl*, a gate lifter, two dump scows, two derrick scows, one drill boat, one punt, two cook boats, one covered scow and four flat scows received various repairs during the winter season. Within the season of navigation the plant was employed as follows: The dredge *Fenelon* was first engaged near Nassau at the lower entrance to lock 22 in deepening the channel, continuing in similar work at the George street wharf, Peterborough, at lock 25 and in Katchawano lake near Three Islands. Later in the season she was employed in removing rock in the vicinity of Young's Point dam, returning near the close of navigation to continue dredging operations in Katchawano lake. The dredge *Auburn* commenced the season's operations in the east channel at the mouth of the Otonabee river. Dredging operations in the channel were carried out and a new seat for the lighthouse prepared at the north-east end of the island, the old pier being then placed upon this new site and refilled with stone. The plant then moved to Hastings and was employed in the removal of a bar of rock below the dam. Work was afterwards resumed at the mouth of the Otonabee river and the season's operations brought to a close by the removal of some old piles at the Harwood wharf and a small amount of dredging in the same vicinity.

Among a variety of lesser repairs and improvements carried out may be mentioned the laying of new floors on eight and complete decks on two bridges

and the scraping and painting of nine bridges, the removal of buoys at various places in the channel, the erection of 881 rods of new fencing, the renewal of 118 stop logs at various dams, repairs to nine wharves and to numerous buildings. Three boom piers at Lakefield and in Katchawano lake were rebuilt in concrete from low water level up. Repairs were made to the hydraulic lift locks at Peterborough and Kirkfield and to other locks at various points on the canal.

During the 1929 season the number of recorded lockages on the canal was 11,911, a decrease of 831 from the record of the year before. The heaviest traffic recorded since 1919, the opening year of the completed Trent canal system, was for the year 1922 when the total lockages numbered 15,388.

*Western Division* (lake Simcoe to Georgian bay).—Under this division, as previously noted, is included that portion of the route of the canal which lies between the navigable waters of lakes Simcoe and Couchiching and Georgian bay, in addition to which must also be included the now abandoned canalization of the Holland river from Cook's bay, at the southerly end of lake Simcoe, to the town of Newmarket, a distance of about  $12\frac{1}{2}$  miles.

The original scheme for this division provided for a lock and terminals at Honey Harbour on Georgian bay connected to Gloucester pool *via* Go Home bay and lake. This, however, has not yet been carried into effect. The navigation of this division is now effected by means of the lock at Washago, the marine railways at Swift rapids and Big Chute, which provide for the transportation of 15 to 20 ton boats of  $13\frac{1}{2}$  foot beam with a length of 55 feet and draught of 4 feet, and the lock at Port Severn.

Following are the more important improvements carried out on this division during the past fiscal year:—

The filling by the Canadian Pacific Railway of the pile trestle approaches to the bridge at Atherley Narrows was completed last summer, an opening 270 feet in width being left at the easterly side as a back channel. The westerly or navigation channel is bridged by a 160 foot through swing span flanked at its westerly end by a 40 foot deck plate girder span.

At the Couchiching lock a wooden frame dwelling house, 24 feet by 30 feet, on a concrete foundation with finished cellar and hot air furnace, was erected for the accommodation of the lockmaster.

The accumulation of excavated rock left after the installation of the guard gate at Couchiching lock was removed and utilized for bank protection at the old Canadian National Railway crossing. By obtaining additional rock from another locality the necessary bank protection at this point was completed.

Repairs were made to the marine railways at Swift Rapids and Big Chute. At Swift Rapids it was found necessary to renew all the track ties as well as the sills of the trestle. The track was relaid and ballasted with broken stone. At Big Chute the track was relaid with 56-lb. rails on new ties and reballasted and the embankment widened with rock to flatter slopes.

In connection with the public lavatory at Swift Rapids a septic tank was installed, the former arrangement of direct discharge into the river having given rise to numerous complaints from residents in the district.

At Port Severn, the previous accommodation having proved inadequate during the busy season, a new wharf 100 feet long and 10 feet wide was constructed, supported on four rock-filled cribs.

Of lesser improvements may be mentioned the reroofing and general repairing of the lockmaster's house at Port Severn, the completion of a new general utility scow, the purchase of a light motor truck, the provision of an 'Evinrude' portable forest fire pump with hose for fire protection at Swift Rapids, the painting of various buildings, buoys, beacons and bridges and similar minor undertakings.

## 5. ST. PETER'S CANAL

The St. Peter's canal, which was reconstructed between the years 1912 and 1917, connects the Bras d'Or lakes with St. Peter's bay on the southeast coast of Cape Breton island, Nova Scotia. It consists of a tidal lock 300 feet in length and 48 feet in width and provides for a minimum depth of 18 feet of water on the lock sills.

During the past season of navigation this canal was in operation between April 22, 1929, and January 11, 1930, and was operated during this time without any serious delay to traffic. The total number of vessels making use of the lock was 1,466, a decrease of 35 from the record of the year before.

Two minor accidents occurred during the year. On July 29 the United States schooner yacht *Bimosa II* collided with the west outside Atlantic gate damaging the foot bridge railings and one valve rod. On August 24 the steamer *Coralstone*, while making the lake entrance to the canal, collided with and slightly damaged the crib wharf on the west side of the entrance.

Repairs and improvements carried out during the season were of a minor nature only. They included the customary cleaning of the lock gates by a diver and the painting of gates above the water line, the scraping and painting of the steel swing bridge over the canal, the painting of the Superintendent's house and barn, repairs to the former Engineer's office now used by the Superintendent, repairs to lock and entrance walls, the renewal of fenders at the Atlantic entrance, general repairs to gate operating machinery and the care of canal grounds and offtake and catchwater ditches.

## 6. MISCELLANEOUS WORKS

### (a) HUDSON BAY TERMINALS

By April 1, 1929, steel had been laid on the Hudson Bay Railway into Churchill. As the last 60 miles however had not been ballasted, being merely laid on hard frozen ground, it could be used for the transportation of heavy material by standard rolling stock only until the break-up of the winter season, which occurred late in May. During the summer months the transportation of light loads was continued by gas car traction. The ballasting of this track was carried out after the break-up and by September 14 had been completed and regular railway service re-established with Churchill.

Between the beginning of April and the latter part of June, 1929, about three hundred and sixty new employees were brought into Churchill making the total working force four hundred and twenty-five.

As in the previous year, transportation of materials over the shore ice from Port Nelson to Fort Churchill was carried on by tractor and about one hundred and forty tons of material were brought in in this manner.

The location of the westerly face of the deep-water dock was finally determined by borings sunk early in the season; no work on the placing of cribs on this side has yet been carried out. The cribs on the easterly side, for a length of about 1,700 feet, were placed during the summer and filled with gravel and stone. Dredging operations over an area about 2,000 feet long and 600 feet wide, immediately in front of the future westerly face of the dock, were carried out and a seat prepared for the cribs. These operations covered the removal of about 470,000 cubic yards of material.

During the working season of 1929 a considerable advance was made in building operations. Two bunk houses were erected, one workmen's dining camp, one eight-roomed cottage, one warehouse, one meat house, a laundry and several other buildings. A steel dump scow and a large timber scow, for use in the building of deep water cribs in 1930, were also constructed and materials were got ready for the building of another scow.

Between the early part of June and the middle of November, 96,000 cubic yards of gravel and stone was excavated. This material was used as filling for cribs, for the filling of a temporary wharf, for ballasting the narrow-gauge railway track to lake Rosabelle, for filling the trestle between the deep-water dock and the future site of the railway station and for levelling off low areas of ground to make them available as piling and storage sites.

A new tug, the *Graham Bell*, was constructed in the winter of 1929. This tug, in company with the *Ocean Eagle* left Quebec on July 18 and after coaling at Gaspé sailed for Hudson Bay on July 25. The *Ocean Eagle*, the larger boat, with a total cargo of 325 tons, took the new tug in tow and after some delay from ice, encountered in the westerly part of Hudson Bay about latitude 61°, arrived at Churchill on August 6. During the same period the tug *George W. Yates*, which had wintered at Port Nelson, made the voyage to Churchill. These two tugs were then utilized in the dredging operations in the harbour already alluded to.

Two ship loads of coal were brought into the new port during the open season, one by the S.S. *Canadian Trooper* the other by the S.S. *Canadian Squatter*. The *Trooper* made the voyage from Halifax between July 25 and August 15. Returning, this vessel left Churchill August 20 and arrived back in Halifax September 1. The *Squatter* made the outward voyage, leaving Sidney, C.B., between September 2 and 15 and the return voyage between September 19 and 28. These two ships delivered 6,050 tons of coal. During the summer the motor schooner *Neophite* transported cargoes, amounting to 400 tons, in three trips between Port Nelson and Churchill. The *Ocean Eagle*, which accompanied the *Neophite* on two trips, also carried cargoes of iron on deck amounting to 100 tons. The *Neophite* made as well one round trip between Churchill and Baker lake and the *Ocean Eagle* two trips to Chesterfield Inlet and return.

In the spring of 1929 the opening of navigation along the west coast of Hudson Bay was delayed by shore winds. All through July and for a part of August an immense field of ice extended from the coast seawards beyond vision between Cape Churchill and Nelson Shoals. It was not until August 6 that it moved out sufficiently to permit of navigation. From then until August 19 a lane of water of considerable width existed which again narrowed for the remainder of the month rendering navigation difficult. After August this ice cleared away. North of Cape Churchill the ice cleared from the bay early in August though present to sufficient extent to cause delay to several vessels bound for Churchill.

Twenty car loads of British Columbia timber, besides lumber and other supplies were brought into Churchill over the railway by regular rolling stock in the month of October.

Ice did not form on the Churchill river in 1929 until October 27, and during that month the mean temperature of the air was 26.5° F. or 11° above normal. The temperature of sea water at Cape Wolstenholm on October was 29° F. Ice first formed in lake Rosabelle on October 21, this being about two weeks later than usual.

#### (b) ST. LAWRENCE SHIP CANAL

Acting on instructions received from the Under Secretary of State for External Affairs, a Conference was held, March 28 and 29, 1929, between the Canadian section of the Joint Board of Engineers and two appointees of the Province of Ontario, Dr. Frederick F. Gaby, Chief Engineer, and Dr. Thomas H. Hogg, Chief Hydraulic Engineer of the Hydro-Electric Power Commission of Ontario, for a consideration of the best means of developing the International Rapids section of the St. Lawrence river. During the ensuing fiscal year thirteen further meetings of this board took place and in connection therewith extensive investigations were carried out both in the office of the Power Commission and that of the Department of Railways and Canals. A report on these conferences

was submitted December 20, 1929, and an appendix, containing estimates of cost will be ready for publication in April.

The staff at Cornwall during the year consisted of a junior engineer, a drill runner and assistant drill runner and a gasoline boat engineer augmented from time to time as necessity demanded. The work carried out in the field included the sinking of forty-seven borings in the International section, twelve in the river above Galops island, nineteen near Morrisburg and Ogden island, five in the river at Crysler island, four in the vicinity of lock 19 of the Cornwall canal and seven at the foot of Cornwall island. It covered also the putting down of seven borings in the Soulanges section on the south shore of the river near St. Timothée, the obtaining of water temperature records at Trois Rivières, Ste. Anne de Bellevue, Kingston and Rockport and the recording of the formation and movement of ice in the International section.

The Schlumberger Electrical Prospecting Company of New York, having been asked to report on the probable location of rock in the vicinity of a dam site under investigation at Ogden island, submitted their findings in August, 1929. The investigations carried on by this company have proved of such value that they have been requested to extend their activities in the vicinity of Cardinal, East Williamsburg and lock 20 on the Cornwall canal.

A careful valuation of the buildings in the towns of Morrisburg and Iroquois, in the villages of Wales, Farran Point and Aultsville, and in part of the town of Cornwall was carried out during the summer of 1929 by Mr. A. H. Parker of the Cornwall staff.

At the Ottawa office the staff employed comprised Mr. D. W. McLachlan, Engineer in Charge, one senior office engineer, two assistant engineers, one draughtsman and one stenographer, with an additional draughtsman for the summer months. This staff was engaged in the preparation of estimates and plans as required by the International Rapids section already referred to, the preparation of estimates for duplicating the existing 14 foot locks at Cornwall and in the investigation of a number of projects having to do with the development of power in the Soulanges section.

### (c) HUNGRY BAY AND STE. BARBE DYKES

These dykes extend westerly along the south shore of lake St. Francis from the upper entrance of the Beauharnois canal for a distance of about 7 miles. They are maintained as a protection against the waters of the lake, the level of which was raised when the canal was constructed. It may here be mentioned that since the opening of the Soulanges canal in 1899 the Beauharnois canal has ceased to be used for navigation and is under lease for power purposes only. The Hungry Bay dyke has been in existence since 1856. The top of this dyke is maintained as a road. The Ste. Barbe dyke was constructed in 1889. At various places along the lake shore, protection walls have been built outside the dykes.

Gales of unusual severity which prevailed on May 4 and 12, 1929, caused considerable damage to both dykes. The waters of lake St. Francis were driven inland, the dykes eroded, portions of the roadway along the Hungry Bay dyke seriously damaged and farms contiguous thereto flooded. The repairing of the damage was taken in hand immediately after the first gale and within six weeks was satisfactorily completed. Large stones were placed along the toe of the slope on the lake side of the Hungry Bay dyke for a length of 9,350 feet as a protection against future erosion and the roadway, which had been so damaged as to be impassable to traffic, was thoroughly repaired and resurfaced with asphalt and macadam. Repairs to the Ste. Barbe dyke which had been less seriously damaged were effected by the deposit of quantities of clay on the crest and the placing of flash boards and wooden sheet piling.

During the past winter stone protection walls along the lake shore paralleling the Ste. Barbe dyke have been rebuilt on a total length of nearly 1.25 mile.

*(d) CHIGNECTO CANAL*

Surveys in connection with a canal across the isthmus of Chignecto, between the bay of Fundy and the Northumberland straits, were commenced in September, 1929.

Three routes, seriously considered in previous reports on this project, the Aulac, Missiguash and La Planche were examined and traverses and levels were run over the Missiguash and La Planche routes. Two hundred and fifty-five borings were made to determine the nature and depth of the surface material and the location of rock when possible. A field office was established at Amherst, N.S., and traverses and levels were plotted and plans prepared, the work being carried out by an assistant and junior engineer and such additional temporary help as was required. A drill runner from the St. Lawrence Waterways staff at Cornwall was employed for the making of the test borings.

The Ottawa St. Lawrence Waterways staff have also assisted in the preparation of plans and in the making of estimates of the cost of canals of various dimensions over the two routes under consideration, this work being still in progress.

A small staff under a junior engineer is at present engaged in the sinking of additional borings on the Aulac route.

I have the honour to be, sir,

Your obedient servant,

A. E. DUBUC,

*Chief Engineer.*

OTTAWA, July 31, 1930.

V. I. SMART, Esq.,

Deputy Minister, Department of Railways and Canals,  
Ottawa, Canada.

# REPORT

## OF THE

### BOARD OF RAILWAY COMMISSIONERS

### FOR CANADA

---

*To the Governor in Council:*

Pursuant to the provisions of section 31 of the Railway Act, 1919, the Board of Railway Commissioners for Canada has the honour to submit its Twenty-sixth Report for the year ending December 31, 1930.

Since the publication of the last report the following amendment has been made to the Railway Act, 1919:—

#### 20-21 GEORGE V

#### CHAP. 36

An Act to amend the Railway Act

*[Assented to 30th May, 1930.]*

**H**IS MAJESTY, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

The *Railway Act*, chapter one hundred and seventy of the R.S., c. 170. Revised Statutes of Canada, 1927, is amended as follows:

1. By inserting the following section immediately after section eighty-two:—

“82A. Every shareholder shall be entitled to have a certificate of proprietorship signed by the officers designated by the board of directors for the purpose, certifying the number of shares held by him and the class thereof. Where any such certificate is signed by a transfer agent acting on behalf of the company, and by a registrar, the signatures of such officers may be facsimiles engraved, printed or otherwise mechanically reproduced. In case any such officer who has signed or whose facsimile signature has been placed upon such certificate shall have ceased to be such before such certificate is issued, it may be issued by the Company with the same effect as if such officer had not ceased to be such at the date of its issue.”

Signatures on certificates may be facsimiles.

2. Subsection one of section two hundred and fifty-five of the said Act is repealed and the following is substituted therefor:—

“255. The railway of the company may, if leave therefor is first obtained from the Board as hereinafter authorized, but shall not without such leave, be carried upon, along or across any existing highway: Provided that the compensation, if any, payable by the company to adjacent or abutting landowners shall be determined under the arbitration sections of this Act in so far as such sections are applicable, and provided that the Board shall not grant leave to any company to carry any street railway or tramway, or any

Railway on highway.  
Leave.  
Compensation.

Consent of  
municipality.

railway operated or to be operated as a street railway or tramway, along any highway which is within the limits of any city or incorporated town, until the company has first obtained the consent therefor by a by-law of the municipal authority of such city or incorporated town; and provided that where leave is obtained to carry any railway along a highway the Board may require the company to make compensation to the municipality if the Board deems proper, said compensation to be determined under the arbitration sections of this Act, in so far as such sections are applicable."

Bell and  
whistle.

3. Section three hundred and one of the said Act is repealed and the following substituted therefor:—

"301. Every locomotive engine propelled on the railway by steam shall be equipped and maintained with a bell of at least thirty pounds weight and a whistle; and every locomotive engine, car or other mechanism, propelled on the railway otherwise than by steam, shall be equipped and maintained with such signalling appliance or appliances as may be approved by the Board."

Sale of goods.

4. Subsection two of section three hundred and fifty-six of the said Act is repealed and the following substituted therefor:—

Application  
of proceeds.

"Bulk  
goods"  
defined.

"(2) If the tolls on live animals or goods liable to deteriorate or perish while in the possession of the company are not paid forthwith on demand, or if the tolls on bulk goods, as hereinafter defined, are not paid within two weeks after demand, or if the tolls on any other goods are not paid within four weeks after demand, the company may without further notice to the consignee or owner advertise and sell the whole or any part of the goods and out of the money realized from such sale retain the tolls payable and all reasonable charges and expenses of such seizure, detention, advertisement and sale. 'Bulk goods' for the purposes of this subsection shall mean and include carload lots of coal, coal products, wood, sand, gravel, brick, scrap metal, and of such other goods as may be approved by the Board."

## PUBLIC SITTINGS OF THE BOARD

During the year covered by the period from January 1, 1930, to December 31, 1930, the Board held 64 public sittings at which 162 applications were heard. The number of public sittings held in the various provinces were as follows:—

Provinces	Number
Ontario . . . . .	35
Quebec . . . . .	8
Manitoba . . . . .	3
Saskatchewan . . . . .	4
Alberta . . . . .	6
British Columbia . . . . .	2
Nova Scotia . . . . .	4
New Brunswick . . . . .	1
Prince Edward Island . . . . .	1
Total . . . . .	64

The applications include a great variety of matters falling within the jurisdiction of the Board under the Railway Act, varying from a complaint of a private individual to weightier matters of general public interest affecting the community as a whole.

## FORMAL AND INFORMAL MATTERS

The number of informal matters dealt with by the Board, as distinguished from matters heard at public sittings, constitute a considerable percentage of the total applications and complaints dealt with by it; that is to say, of a total of 3,664 applications and complaints received and dealt with by the Board, 95 per cent were disposed of without the necessity of such formal hearing. These informal complaints, dealt with and settled without the necessity of hearing, entail in many instances a considerable amount of inquiry and consideration on the part of the Board's officials, and cover a wide range of subjects, as, for example, a complaint of a more or less trivial nature to a matter of general public interest affecting the community as a whole, or involving the application of some general principle, regarding the railway rates.

## RAILWAY GRADE CROSSING FUND

In accordance with the provisions of subsection (5) of section 262 of the Railway Act, 1909, provision was made that the sum of \$200,000 each year, for ten consecutive years from the 1st day of April, 1919, be appropriated and set apart from the consolidated revenue fund for the purpose of aiding actual construction work for the protection, safety and convenience of the public in respect of highway crossings of railways at rail level, in existence on the 1st day of April, 1909, the said sums to be placed to the credit of a special account to be known as the "Railway Grade Crossing Fund," to be applied by the Board, subject to certain limitations set out in the Act, and amending Acts, solely towards the cost (not including that of maintenance and operation) of actual construction work for the purpose specified.

In 1928, the Railway Act was amended by chapter 43, 18-19 George V, and provision was made that in the case of any one crossing the total amount of money to be applied by the Board out of the Railway Grade Crossing Fund, in providing protection, safety and convenience for the public, shall be 40 per cent of the cost of the actual construction work, and in no case shall the contribution exceed \$100,000.

Provision is also made that in case any province contributes towards the Railway Grade Crossing Fund, the Board may apportion, direct and order payment out of the amount so contributed by such province for the purpose of said fund, subject to any conditions and restrictions made and imposed by such province in respect of its contribution.

From the 1st day of April, 1909, to the 31st day of December, 1930, the Board has ordered contributions from the Railway Grade Crossing Fund towards the protection of 1,299 crossings, as follows:—

By automatic interlocking plants (street railway protection).....	14
By closing crossings.....	155
By crossings eliminated.....	84
By diversion and overhead bridge.....	5
By diversion and subway.....	3
By diversion to subway.....	4
By electric bell.....	208
By electric bell and flashlight.....	2
By electric bell and wigwag.....	367
By electric bell and wigwag and removing obstructions to view.....	7
By easing curve on approach to bridge.....	1
By gates.....	125
By gates—automatic.....	3
By gates and half interlocker.....	1
By grade reduction on crossing approaches.....	6
By footbridge.....	1
By lengthening ringing circuit of bells.....	2
By lightning flash signals.....	50
By overhead bridges.....	53
By removing obstructions to view.....	83

By removing obstructions to view and reducing grade.....	6
By shelter (watchman's) . . . . .	1
By subways . . . . .	107
By towers (watchman's) . . . . .	3
By tunnel . . . . .	1
By wigwags.....	7

There were 202 highway diversions constructed which made it possible to close 155 crossings, and eliminate traffic from 84 crossings.

During the year 1930, protection was provided at 153 crossings, as follows:—

By closing crossings.....	23
By crossings eliminated.....	30
By diversion and overhead bridge.....	5
By diversion and subway.....	3
By electric bell and wigwag.....	51
By footbridge . . . . .	1
By grade reduction and widening approaches.....	4
By grade reduction and improving view.....	2
By overhead bridge . . . . .	6
By removing obstructions to view.....	16
By subway . . . . .	11
By wigwag . . . . .	1

There were 35 highway diversions constructed during the year 1930, which made it possible to close 23 crossings and eliminate traffic from 30 crossings.

### GENERAL ORDERS

The following is a brief summary of some of the matters dealt with under the Board's General Orders during the year ending December 31, 1930:—

General Order No. 483, dated March 5, 1930, directing that all railway companies subject to the Board's jurisdiction adopt the following regulations in the operation of grade crossings protected by automatic signals or automatic gates:

That when a train or engine passes over any crossing protected by automatic signals or automatic gates and does not go beyond the end of the circuit (in most cases located approximately 2,000 feet from the crossing), before making a reverse movement over the same crossing, it will be necessary for trainmen to flag the crossing.

General Order No. 484, dated April 7, 1930, directing that all railway companies subject to the Board's jurisdiction adopt and use a hand signal by day and a signal by clear (white light) lantern at night to protect the movements of vehicles over railways at highway crossings at which trainmen are required to protect during the time trains are uncoupled at such crossings.

General Order No. 485, dated May 30, 1930, directing that General Order No. 483 be amended by adding at the end thereof the words "the end of the circuit at such crossings to be marked by a small finger-board with the words 'end of block' or 'end of circuit.'"

General Order No. 486, dated July 7, 1930, directing that the "Regulations With Respect to Railway Safety Appliance Standards" approved under the Board's General Order No. 102 be amended by providing that on tenders of the Vanderbilt type, with three filling-holes, there shall be a hand-rail four inches above the level of the top running-board not less than one inch in diameter, extending from the present hand-rail, which extends from the coal space to within twenty inches of the first filling-hole, to the rear end of the tender at each side of the top running-board.

General Order No. 487, dated September 22, 1930, directing that effective October 1, 1930, solid fiberboard boxes, complying with Container Specifications 23A, 23B, 23C, 23D, and 23E, published in Agent B. W. Dunn's tariff No. 2 on file with the Board under C.R.C. No. 2, may be used for shipping freight over railways in Canada subject to the Board's jurisdiction.

General Order No. 488, dated October 2, 1930, rescinding Order No. 45469, dated September 24, 1930, and providing that a form of release of liability in respect of travelling on non-passenger cars be approved as therein set out.

General Order No. 489, dated October 14, 1930, rescinding the Board's General Order No. 487, dated September 22, 1930, and directing that effective October 1, 1930, solid fiberboard boxes, complying with Container Specifications 23A, 23B, 23C, 23D, and 23E, published in Agent B. W. Dunn's Tariff No. 2, on file with the Board under C.R.C. No. 2, may be used for shipping classes of freight permitted by the said tariff to be shipped in such containers over railways in Canada subject to the Board's jurisdiction.

## GENERAL DECISIONS AND RULINGS OF THE BOARD

Submitted herewith, epitomized, are some of the more important matters dealt with by the Board at its public sittings for the year ending December 31, 1930.

### CITY OF TORONTO V. CANADIAN PACIFIC AND CANADIAN NATIONAL RAILWAY COMPANIES

#### (North-West Grade Separation)

#### *Grade Separation — North West Toronto — Grade Crossing Fund — Amount expended in Toronto*

The application of the city of Toronto for an order directing the Canadian Pacific and Canadian National Railway Companies to proceed with grade separation on St. Clair avenue and Lansdowne avenue following the judgment of the Board of May 8, 1924, was dismissed upon the ground that the situation had not altered since the judgment of the Board in 1928 (see 34 C.R.C. 143) wherein it was stated that upon the record of expenditures in the city of Toronto for grade separation and having in mind the question of general needs the Board would not be justified in making an order involving further expenditure by the railway companies and further contribution from the grade crossing fund.

It was pointed out that from a total expenditure from the railway grade crossing fund to date amounting to \$1,970,012.24 the amount expended in the city of Toronto was \$1,460,084.71.

The facts are fully set out in the judgment of the Chief Commissioner, dated January 3, 1930, concurred in by the Assistant Chief Commissioner. C.R.C., Vol XXXVI, p. 243.

### CITY OF QUEBEC V. QUEBEC RAILWAY, LIGHT AND POWER COMPANY

#### *Contract—City—Railway—Statute.*

Upon application of the city of Quebec for an order directing the Quebec Railway, Light and Power Company to carry out the terms of a contract entered into by the city and the railway company, which contract was ratified and confirmed by Act of the Province of Quebec, 15 George V, c. 91, s. 5, the Board ordered pursuant to section 35, Railway Act, R.S.C. 1927, section 35, that the railway company construct a "Y" track at the end of its steel on Garnier street and a passing track on Marguerite Bourgeois street, and that the company operate its cars on the said streets on regular intervals in accordance with the terms of the contract.

The facts are fully set out in the judgment of the Deputy Chief Commissioner, dated January 4, 1930, concurred in by Mr. Commissioner Norris, C.R.C., Vol. XXXVI, p. 246.

## HAMILTON STREET RAILWAY COMPANY V. TORONTO, HAMILTON AND BUFFALO RAILWAY COMPANY

(Aberdeen Avenue Crossing Case)

*Railway Crossing at Grade—Spur—Trains Stopping at Crossing—Running Rights of Senior Company taken over by Third Company—No Forfeiture of Rights—Seniority Affirmed.*

Upon an application to determine seniority rights in the following circumstances:—

In 1913 the Board authorized the Toronto, Hamilton and Buffalo Railway Company (Toronto company) to cross on the level the tracks of the Hamilton and Dundas Street Railway Company (Dundas company) on Aberdeen avenue, Hamilton, and in 1919 by a further order the Toronto company was authorized to operate a spur on Aberdeen avenue crossing the line of the Dundas company. Certain conditions were imposed including the Toronto company's trains first stopping at the crossing.

In 1926 the Board authorized the Toronto company to operate its trains over the crossing without stopping as provided by the previous orders. Shortly after the Dundas company had ceased to operate its cars on Aberdeen avenue, the Hamilton Street Railway Company (Hamilton company), having taken over the running rights of the Dundas company within the city of Hamilton under agreement with the corporation, as confirmed by Ontario statute, chapter 140, 17 Edward V (1927), operated the street railway on Aberdeen avenue up to the Toronto, Hamilton and Buffalo crossing.

The Board held that there had been no forfeiture of rights by the Dundas company and affirmed the seniority of the Hamilton company over the Toronto company at the crossing of Aberdeen avenue.

The facts are fully set out in the judgment of the Chief Commissioner, dated June 5, 1930, concurred in by the Assistant Chief Commissioner, C.R.C., Vol. XXXVII, p. 109.

WESTERN CANADA FLOUR MILLS, LIMITED, *et al* V. CANADIAN NATIONAL AND CANADIAN PACIFIC RAILWAY COMPANIES

*Tolls—Wharfage Charges—Vancouver, B.C.—Absorption by Railways—Jurisdiction of Board.*

Upon complaint against proposed amendments to tariffs of the Canadian Pacific Railway and Canadian National Railways eliminating the provisions providing for the absorption of terminal charges, including charges for unloading, switching and wharfage upon import and export traffic via Vancouver and Victoria, B.C., the Board, upon hearing what was alleged by the interested parties and upon objection by the railway companies that the Board lacked jurisdiction in the matter, decided that it should of its own motion state a case in writing to the Supreme Court of Canada under section 43, subsection 1, of the Railway Act, R.S.C. 1927, c. 170, as to the jurisdiction of the Board in the matter of wharfage charges on a movement from a point in Canada to a foreign country.

The following cases were referred to:—

(General Freight Rates Investigation, 33 C.R.C., 127; Port Arthur and Fort William Boards of Trade v. Canadian Freight Association, 24 C.R.C., 80; in *re* Cartage Tolls, 19 C.R.C., 389; Toronto Board of Trade v. G.T.P., C.P.R. and C.N.R., 26 C.R.C., 180; Brant Milling Co v. G.T. P.R., Co., 4 C.R.C., 259; Montreal Produce Merchants' Association v. G.T.

and C.P. Ry. Cos., 9 C.R.C., 232; Graham Co. v. Canadian Freight Association, 22 C.R.C., 355; Dominion Atlantic Ry. Co. v. N.S. Shippers' Assn. and C.N.R., 27 C.R.C., 182, and Leonard Warehouses, Ltd., v. C.P.R., C.N.R. & Great Northern Ry. Cos., 34 C.R.C., 196.)

The facts are fully set out in the judgment of the Assistant Chief Commissioner, dated January 13, 1930, concurred in by the Deputy Chief Commissioner and Mr. Commissioner Lawrence. C.R.C., Vol. XXXVI, p. 270.

CANADIAN PACIFIC AND BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY V. CANADIAN NATIONAL RAILWAYS, *et al*

*Tolls—Joint—Unjust Discrimination—Jurisdiction of Board—Dismissal.*

Application of the British Columbia Electric Railway Company and the Canadian Pacific Railway for a review and rescission of the Board's Order No. 42808, dated June 10, 1929, directing that joint rates be published between stations on the Vancouver and Lulu Island Railway and points on the Canadian National Railways, was dismissed and the order confirmed and reinstated to become effective on March 15, 1930.

Held:

1. The Vancouver and Lulu Island Railway Company, incorporated by an Act of the Legislature of British Columbia (54 Victoria, chapter 60, 1891), and its undertaking having been declared by Parliament to be for the general advantage of Canada (1 Edward VII, chapter 86 1901), is subject to the jurisdiction of the Board of Railway Commissioners for Canada.

2. The British Columbia Electric Railway Company, being incorporated under the laws of Great Britain, is also subject to the jurisdiction of the Board by virtue of section 6, subsection 1 (a), of the Railway Act (R.S.C. 1927, chapter 170).

3. Stock ownership is not a factor to be considered in rate-making so long as the mode of operation and corporate entity remain distinct and separate.

4. The tariffs published by the British Columbia Electric Railway Company as operator of the Vancouver and Lulu Island Railway were lower for the same or similar services, or on the same or similar goods between Lulu Island points and the Canadian Pacific Railway, Great Northern Railway and Northern Pacific Railway territories than between the same points and Canadian National Railways territory, and were therefore contrary to sections 314 (4) and 319 of the Railway Act.

5. Under section 325 of the Railway Act, the power of the Board to fix, determine and enforce just and reasonable rates cannot be limited by any agreement; the Board may properly consider such agreement; but its powers are not affected by it.

The facts are fully set out in the judgment of the Board, dated March 7, 1930., C.R.C., Vol. XXXVI, p. 263.

NICHOLS CHEMICAL COMPANY, LIMITED V. CANADIAN PACIFIC RAILWAY COMPANY

*Tolls—Sulphuric Acid—Unjust Discrimination—Reasonableness—Cost of Production*

The complaint of the Nichols Chemical Company, Limited, alleging unjust discrimination in the matter of rates on sulphuric acid from Tadanac, B.C., to Ioco, B.C., was dismissed by the Board on the grounds that

1. The complaint was based upon an incorrect assumption as to the relationship of commodity rates to standard mileage rates, and that no definite relationship between the two types of rates existed.

2. That mere differences in cost of production was not the criteria of reasonableness or unreasonableness of rates.

3. That the rates concerned were not shown to be unreasonable or unjustly discriminatory.

The following cases were referred to:—

Canadian Portland Cement Co. v. G.T.R., 9 C.R.C. 209; and Calgary Board of Trade v. C.N.R. and C.P.R., 36 C.R.C. 106.

The facts are fully set out in the judgment of the Assistant Chief Commissioner, dated March 21, 1930, concurred in by Mr. Commissioner Norris. C.R.C. Vol. XXXVI, p. 347.

CANADIAN PACIFIC RAILWAY COMPANY v. CANADIAN NATIONAL RAILWAY COMPANY  
(Reynaud Crossing Case)

*Railway Crossing—Interlocker—Apportionment of Cost—Senior and Junior—  
Title—Function of Board*

Upon consideration of the question of apportionment of the cost of the interlocking plant at the grade crossing of the Canadian National Railway by the Canadian Pacific Railway at Reynaud, Saskatchewan, Mileage 60.19 of the Lanigan to Prince Albert Branch of the Canadian Pacific Railway the Board held, following the Kaiser Crossing Case, CN.R. v. C.P.R., 7 C.R.C. 297, that the Canadian National is senior at the point of crossing and the cost attaching to the crossing must be borne by the Canadian Pacific as the junior company, the Canadian National being a railway in actual occupation with existing work upon the ground and owner of the fee at the point of crossing under plan duly filed under the provisions of the Expropriation Act pursuant to its Act of Incorporation, R.S.C. (1927), chapter 172, sections 17 and 21. The title of the Canadian National is not open to question before the Board, whose function is not to pass upon the constitutionality of Acts of Parliament.

The facts are fully set out in the judgment of the Assistant Chief Commissioner, dated April 15, 1930, concurred in by Mr. Commissioner Lawrence, Mr. Commissioner Norris and Mr. Commissioner Stoneman. C.R.C., Vol. XXXVII, p. 95.

CANADIAN PACIFIC RAILWAY COMPANY v. CANADIAN NATIONAL RAILWAY COMPANY  
(Sudbury Crossing Case)

*Railway Crossing—Overhead Bridge—Senior and Junior—Additional Tracks—  
Grade Revision and Double Tracking—Cost of Raising Bridge—  
Statutory Clearance*

In 1912 the Board granted an application of the Canadian Northern Ontario Railway Company to cross the main line and tracks of the Canadian Pacific Railway Company (senior) by an overhead crossing on lot 6, concession 4, township of McKim, district of Sudbury, Ontario, the junior company to make provision for additional tracks whenever the senior company requires them. In 1929 the senior company being engaged in revising its grade and double tracking its line, the Board granted an application to construct a second track across the tracks of the Canadian National Railways (the successor to the Canadian Northern Ontario Railway Company) and the latter company was required to raise the overhead bridge at the crossing at its own expense, so as to give the full statutory clearance over the double track of the senior company.

(Quebec Ry. L. & P. Co. v. C.P.R. et al, 28 C.R.C. 17, at p. 19; G.T.P. Ry. Co. v. United Counties Ry. Co. (St. Hyacinthe case), 7 C.R.C. 294; London Ry. Commission v. Bell Telephone Co., 18 C.R.C. 435; Can-

adian Northern Ry. Co. v. C.P.R. 11 C.R.C. 432; Maritime Telegraph & Telephone Co. v. D.A. Ry. Co. and Baird v. C.P.R., 20 C.R.C. 213, referred to.)

The facts are fully set out in the judgment of the Assistant Chief Commissioner, dated April 17, 1930, concurred in by Mr. Commissioner Norris. C.R.C., Vol. XXXVII, p. 101.

---

IMPERIAL OIL COMPANY LIMITED, TORONTO, ONT. v. PERE MARQUETTE RAILWAY COMPANY

*Tariffs—Tolls—Joint-Interswitching—Non-competitive—Working Arrangements  
Between Carriers—Ruling*

Upon application of the Imperial Oil Company, Limited, Toronto, for a ruling from the Board that: (1) the rate of 16½ cents per cwt. on petroleum products in carloads from Sarnia, Ont., to Chatham, Ont., as published in Pere Marquette Railway Tariff, C.R.C. No. 2553, is a competitive rate and that the traffic carried thereunder is not subject to interswitching charges when for delivery on the C.W. and L.E. Railway; and (2) Chatham is intermediate to Charing Cross, Ont., and therefore the rate of 16½ cents, which is the published rate in effect between Sarnia and Charing Cross, applies as a maximum; the Board held:

1. That a provision in the Pere Marquette Tariff, C.R.C. No. 2553, had the effect of making the rate on petroleum and petroleum products from Sarnia to Chatham applicable via Pere Marquette Railway only;

2. That the consummation of prorating and working arrangements is a prerequisite to the establishment of joint rates, which arrangements did not exist in this case.

3. That no violation of the long and short haul clause of the Railway Act was proven in connection with the application of the 16½ cent rate to Charing Cross via Chatham, making the latter point intermediate.

(Canadian Lumbermen's Ass'n. v. C.N.R., 17 B.R.C. 583, referred to and distinguished.)

The facts are fully set out in the judgment of the Board, dated May 20, 1930. C.R.C., Vol. XXXVI, p. 440.

---

WESTFIELD COUNTRY CLUB, WESTFIELD CENTRE, N.B., *et al*, v. CANADIAN PACIFIC RAILWAY COMPANY

(St. John River Bridge Tolls Case)

*Tolls—Passenger—Commutation Fares—St. John River Bridge—Tariffs—  
Constructive Mileage—Order No. 29152*

Tariff regulations of the Canadian Pacific Railway Company provided that in computing passenger mileage to or from Saint John, N.B., and any point east of Megantic, P.Q., four miles one way and eight miles for round trip should be added to or from Saint John to cover tolls for the bridge, which had been built to connect Saint John with the railway line which previously stopped at West Saint John, necessitating ferrying passengers and freight across to the city of Saint John.

Upon complaint *re* the commutation tolls from suburban centres to the city of Saint John, it was held by the Board:

(1) That the provisions of order No. 29152 of April 1, 1920, implementing the decision rendered on that date in the Commutation Rate Case (25 C.R.C. 409) laid down a general basis of commutation rates applicable to Eastern Canada.

(2) That the manifest intention of the judgment in the Commutation Rate Case was to have a general scheme which, in the territory to which it was applicable, would not consider differences as between one mile and another of ordinary track.

(3) That the principle set out in that judgment had been applied in the case of movements over the bridge at Saint John, and in addition the factor of constructive mileage had been introduced.

(4) That this principle of commutation rates should apply out of Saint John without introducing the factor of constructive mileage.

The facts are fully set out in the judgment of the Assistant Chief Commissioner, dated May 21, 1930, concurred in by Mr. Commissioner Lawrence. C.R.C., Vol. XXXVII, p. 130.

WINNIPEG ELECTRIC RAILWAY COMPANY *v.* CANADIAN NATIONAL RAILWAY COMPANY  
*Railway Crossing—Single Track—Double Track Subsequently Built—Construction, Maintenance, Operation and Protection—Cost Senior and Junior*

The Winnipeg Electric Railway Company authorized under municipal by-law to construct and operate a single or double track line on any street in the city of St. Boniface, having built a single track along Tache Avenue, afterwards crossed by a spur of the Canadian National Railway Company was held to retain its seniority for an additional track when subsequently built, the cost of construction, maintenance, operation and protection of the second crossing to be borne by the Canadian National Railway Company.

(G.T.R. *v.* United Counties Ry. Co., 7 C.R.C. 294; G.T.R. *v.* Kitchener, 2 C.R.C. 13; City of Edmonton *v.* G.T.P. and C.N.R., 15 C.R.C. 443, referred to and followed.)

The facts are fully set out in the judgment of the Deputy Chief Commissioner, dated May 22, 1930, concurred in by Mr. Commissioner Stoneman. C.R.C., Vol. XXXVI, p. 420.

JAMES GOLDIE COMPANY, LIMITED *v.* CANADIAN NATIONAL RAILWAYS  
*Tariffs—Grain—Grain Products—Stop-over—Warehousing and Reassembling—Reshipping—Balance of Through Rate—Unjust Discrimination.*

Upon application of the James Goldie Company, Limited, of Toronto, Ont., for an order directing the Canadian National Railways to accord to the applicant arrangements for stop-off at Montreal, P.Q., and Moncton, N.B., for warehousing and reassembling and privileges of reshipping to points in Quebec and the Maritime Provinces at the balance of the through rate, on all shipments of grain products from mills at interior points in Ontario, upon the same basis of equality as to rates, privileges and transportation services as was accorded and allowed under published tariffs to shipments of ex-lake grain products from Ontario bay ports to Montreal and other points in Quebec and the Maritime Provinces, the Board directed that the interior mills should be placed upon a parity in respect of privileges and rates with their competitors operating from Bay ports.

Upon consideration of the whole situation and upon hearing the arguments contra by the representatives of the carriers, the Board held that the granting of such privileges to shipments from bay ports, namely the privilege of stop-over for warehousing and re-assembling and reshipment to final destination at the balance of the through rate, and the withholding of such privilege from shipments from interior mills created unjust discrimination.

(Dominion Millers' Association *v.* Canadian Freight Association, 29 C.R.C. 339, referred to.)

The facts are fully set out in the judgment of the Assistant Chief Commissioner, dated May 26, 1930, concurred in by Mr. Commissioner Norris. C.R.C., Vol. XXXVI, p. 428.

## HENRY WISMER V. DETROIT-WINDSOR SUBWAY COMPANY

*Tunnel—Obstruction of Highway—Loss of Business and Profits—Compensation—County Judge—Railway Act, Section 255*

Upon an application by Henry Wismer for an order directing compensation to be paid by the Detroit-Windsor Subway Company for loss of profits to his business by reason of the temporary obstruction of London street during construction of the Windsor entrance to the tunnel under the Detroit river, the Board directed the dispute to be referred to the county judge for adjudication under section 255 of the Railway Act, but without deciding whether such claim is valid in law under the facts which may be shown before the county judge having regard to the rule laid down in *C.P.R. v. Albin*, 24 C.R.C., at p. 436; 49 D.L.R., at p. 630, following *Howard v. Metropolitan Board of Works* (1888), 4 T.L.R. 591, that where access to a man's premises has been so obstructed as to affect the owner's business or trade, a right to compensation arises, based on a diminution in value of his property by reason of the construction of the works complained of.

The facts are fully set out in the judgment of the Chief Commissioner, dated May 26, 1930, concurred in by the Assistant Chief Commissioner. C.R.C., Vol. XXXVI, p. 423.

## TOWN OF SANDWICH V. EXPRESS TRAFFIC ASSOCIATION

*Express-Free Delivery Limits—Rates—Extension—Adjoining Municipalities*

Upon application of the Municipal Corporation of the Town of Sandwich for an order directing the Canadian Pacific Express Company, the Canadian National Railways Express Department, and the American Railway Express Company to extend the free local collection and delivery zone for express traffic from the city of Windsor, or to create a free local collection and delivery zone in a portion of the town of Sandwich, which application was opposed by the Express Traffic Association on the ground that the volume of traffic at Sandwich did not warrant the expense involved in such service, it was held by the Board:—

(1) That the Board in the past has not ordered a wagon service to be installed at any point; but has from time to time, by order, enlarged the existing delivery limits, when streets have been paved and the density of population was such as, in the opinion of the Board, warranted placing the extra cost of the extended service on the companies.

(2) That where throughout the entire corporate limits the volume of traffic and the population are sufficiently dense, and other requisites exist, free delivery would be within the rules laid down in the judgment of the Board in *Express Traffic Association v. Cities of Montreal, Toronto, Winnipeg, et al* (1919), 25 C.R.C. 61, and where two municipalities have actually grown together with an unbroken density of population and volume of business and with equal conditions on both sides of the border line, no reason exists why a continuation of such service should not prevail throughout the two neighbouring municipalities, to the degree and extent to which they conform to the other requisites of service embodied in the rules. Personal inconvenience in individual cases should not change the application of the rules laid down by the Board.

(3) That the free cartage and delivery limits in the city of Windsor should be extended to include that portion of the town of Sandwich adjacent thereto, which conforms to the provisions of the judgment of the Board dated July 17, 1919, *supra*, as applicable to one municipality.

The rules referred to are fully set out in present judgment at pp. 144-5.  
Express Traffic Association v. Cities of Montreal, Toronto, Winnipeg, *et al*,  
25 C.R.C. 61, applied.

The facts are fully set out in the judgment of the Chief Commissioner,  
dated June 2, 1930, concurred in by the Assistant Chief Commissioner. C.R.C.,  
Vol. XXXVII, p. 139.

DOMINION ATLANTIC RAILWAY COMPANY V. CANADIAN NATIONAL RAILWAYS

*Tariffs—Interswitching—Argentine Corn—Halifax, N.S.—Domestic Shipments  
—Order No. 35735—Ruling*

Order of the Board No. 35735, dated October 27, 1924, provided that the charge of the Canadian National Railways for interswitching c.l. traffic (ex water or for furtherance by water) to or from the Dominion Atlantic Railway between Halifax yards and Deepwater terminals, should be (with certain minimum rates and weights) 1 cent per 100 pounds; and further provided for absorption of not less than one half the charge in the event of publication of the same switching toll by the Canadian National Railways between Halifax yards and Richmond and ocean terminals. This last mentioned charge was established by the Canadian National Railways. Upon complaint of the Dominion Atlantic Railway that the Canadian National were about to assess a local switching rate of 3 cents per 100 pounds on traffic when for Dominion Atlantic points competitive with the Canadian National Railways, the Board ruled that the interswitching rate of 1 cent per 100 pounds published in item 50, section 2-C of Canadian National Railways, Tariff C.R.C. E-1456 was applicable to the movement of Argentine corn between ocean terminals and the Dominion Atlantic Railway.

*Held:* That order No. 35735 and the tariff involved relate to traffic ex-water for furtherance by water and that the provisions made no distinction dependent upon whether the traffic moved under special import or export rates or at local or domestic rates.

The facts are fully set out in the judgment of the Board, dated September 10, 1930. C.R.C., Vol. XXXVII, p. 117.

T. H. ESTABROOKS LIMITED, SAINT JOHN, N.B., V. CANADIAN FREIGHT ASSOCIATION  
*Tolls—Commodity—Tea—Unjust Discrimination—Previous Judgment—Applica-  
tion to Vary, Rescind or Rehear—Onus—Dismissed*

Upon application to vary or rescind the judgment of the Board dated October 18, 1928, 34 C.R.C. 362, wherein it was held that commodity rates on tea from Vancouver, B.C., to points in Western Canada had not been shown to create unjust discrimination against Saint John, N.B., or to rehear the whole complaint, the Board upon hearing the evidence adduced, held:

(1) That one criterion of unjust discrimination is whether the district in whose favour discrimination is alleged has profited at the expense of the locality against which it is alleged the discrimination has taken place.

(2) That some affirmative evidence is required as to how the rates complained of react to the detriment of the applicant.

(3) That variations in the amount of sales are not conclusive in the absence of evidence showing specifically that the rate factor was the one responsible for the variation.

(4) That in this instance an affirmative showing of unjust discrimination or undue preference had not been made.

The application was dismissed.

G.T.R.*, 24 C.R.C. 177; *Spanish River Pulp & Paper Co. v. C.P.R. et al*, 28 C.R.C. 100, at p. 112; *James Goldie Co. v. C.N.R.*, 36 C.R.C. 428, referred to and followed.

The facts are fully set out in the judgment of the Assistant Chief Commissioner, dated September 11, 1930, concurred in by Mr. Commissioner Lawrence. C.R.C., Vol. XXXVII, p. 134.

#### CANADIAN NATIONAL RAILWAYS, *et al*, v. GEBO COAL COMPANY, LIMITED

*Construction—Mines—Compensation—Lands—Minerals—Powers of Board—Railway Act, Section 196 (2), Section 185 (1)—Incidental Damages*

By Order No. 42530, dated April 29, 1930, as amended by Order No. 44239, dated January 24, 1930, the Canadian National Railways were directed under the provisions of section 185 of the Railway Act to build, maintain and operate an industrial spur from the end of steel of the Luscar Collieries branch line a distance of about six miles to the property of the Gebo Coal Company.

Upon application of the Canadian National Railways and the Luscar Collieries, Limited, under Section 197 of the Railway Act for an order fixing such compensation, if any, as may be found payable by reason of the severance of the land lying over the mines of the latter company due to construction of the spur and compensation for any minerals which cannot be obtained by reason of the construction of the spur, and upon application of the Gebo Coal Company, Limited, for a declaratory order to the effect that by reason of the terms of an agreement dated July 1, 1927, between the railway and the Luscar Collieries, Limited, no compensation could be claimed by or paid to the Luscar Collieries, Limited, on account of the construction or operation of the spur line to the lands of the Gebo Coal Company, Limited, the Board held:

1. That since the passing of Section 197 of the Railway Act compensation to mine owners either for severance of land or for minerals is no longer necessarily to be made when the right of way is expropriated, but is to be made if and when occasion arises upon an application under Section 196 (2) at which time the actual damage sustained can be accurately determined, and the amount so determined will become part and parcel of the incidental damages referred to in Section 185 (1) of the Act.

2. That therefore no order should be made at present for payment or deposit of compensation in respect of minerals and that as the Crown, as owner of the surface rights, had given its consent the railway should be required forthwith to carry out the directions of the previous order.

Order No. 45195 issued under date of August 4, 1930, directed the Canadian National Railways to carry out the provisions of Order No. 42530, and the amendments thereto, the work to be commenced within thirty days and completed within ninety days of the date of the order, without prejudice to the rights of all interested parties as regards the question of compensation and the questions of law arising out of the agreement between the Luscar Collieries and the Canadian National Railways dated July 1, 1927.

The facts are fully set out in the judgment of the Deputy Chief Commissioner, dated August 4, 1930, concurred in by Mr. Commissioner Norris and Mr. Commissioner Stoneman. C.R.C., Vol. XXXVII, p. 238.

UNITED FARMERS OF ALBERTA v. CANADIAN PACIFIC AND CANADIAN  
NATIONAL RAILWAYS

*Tariffs—Live Stock—Western Canada—Stop-off—Completion of Load—Truck Competition—Unjust Discrimination—Eastern Canada—Carrier's Discretion.*

Tariffs of the Canadian National and Canadian Pacific Railways in Western Canada contain a provision permitting live stock to be stopped off once in transit to complete loading on the direct line of transit between point of shipment and original billed destination, at a charge of \$3 per car. Upon application for an order of the Board directing that the tariffs be revised to allow for two stop-offs for completion of loading at a charge of \$3 per stop-off, the United Farmers of Alberta alleged: (1) That motor truck competition was detrimental to the marketing of live stock by the United Farmers' organization and that the railway companies should meet this competition by means of the additional stop-off privilege; and (2) that arrangements in Eastern Canada permitted of more than one stop-off for completion of loads, which created discrimination against Western Canada.

The Board dismissed the application. It was held:

1. That as for the motor truck competition alleged, it was within the discretion of the railway companies to meet such competition; that the railway companies have a right to establish competitive rates, but the board does not direct their establishment as a matter of compulsion.

2. That existence of an arrangement in Eastern Canada, established under the particular conditions there existing, and the absence of a similar arrangement in Western Canada, is not necessarily unjust discrimination of the character forbidden by the Railway Act, and that no evidence had been offered to show that the arrangement in Eastern Canada was in any way detrimental to the western industry.

3. That the privilege applied for could not be granted without creating a serious disturbance in the railway service and without serious inconvenience and injury to the live stock industry at large, and to the shippers of carload lots in particular.

The facts are fully set out in the judgment of the Board, dated September 27, 1930. C.R.C., Vol. XXXVII, p. 290.

---

UNITED FARMERS OF CANADA, SASKATCHEWAN SECTION, LIMITED v. CANADIAN  
NATIONAL AND CANADIAN PACIFIC RAILWAY COMPANIES *et al*

*Rate Structure—Carload Traffic—Stop-off for Unloading—Cost of Distribution—Competition—Discretion—Railway Act, Sec. 314, ss. 3*

Application was made by the United Farmers of Canada, Saskatchewan Section, Limited, for an amendment to the rate structure which would permit carload shipments of twine and flour to be made from point of loading to ultimate destination with the privilege of stop-off for partial unloading en route

while the train is at the station, at the carload rate, with a reasonable charge for the stop-off privilege. It was requested that carload rates be made applicable from the point of origin to the point to which either portion of the freight was carried. The basis of the application was the desire to decrease the costs of distribution. No allegation of unreasonableness of rates or of unjust discrimination was made.

The Board, dismissing the application, held:

1. That as to the effect of motor truck competition alleged, it was within the discretion of the carriers to meet such competition or not;

2. The privilege asked for could not be denied with respect to similar applications for its extension to other commodities without creating unjust discrimination;

3. That a consignee who cannot take the quantity of freight requisite to obtain the carload rating cannot expect to receive less than carload quantities at carload rates. The privilege applied for, if granted, would break down one of the most important principles of rate-making.

Province of Alberta v. Canadian Pacific Ry. Co., 27 C.R.C. 317; Ross Leaf Tobacco Co., Ltd. v. Canadian Freight Ass'n., 17 B.R.C. 27; Alberta Wholesale Implement Ass'n.; Calgary, *re* Stop-over Privilege for Unloading Farm Machinery, 17 B.R.C. 411, referred to and followed.

The facts are fully set out in the judgment of the Board, dated October 15, 1930. C.R.C., Vol. XXXVII, p. 302.

EASTERN CANADA FRUIT AND VEGETABLE JOBBERS ASSOCIATION v. CANADIAN  
NATIONAL RAILWAY COMPANY

*Tariff—I.C.C. Circular No. 18-A, Rule 77—Intermediate Point—Long and Short  
Haul Clause—Ruling*

Upon application of the Eastern Canada Fruit and Vegetable Jobbers' Association for a ruling as to the rate properly applicable on a c.l. shipment of tomatoes from Sitka, Tenn., July 10, 1926, to Ottawa, Ont., the Board made a declaratory order to the effect that, under the wording of the tariff rules incorporated in the tariff applicable to the shipment, Ottawa being directly intermediate to Lachute, P.Q., the rate of \$1.11 per cwt. to Lachute was applicable to Ottawa in this instance under the terms of the tariff.

Report of the Chief Traffic Officer *re* Direct Routing in Tariffs of C.N.R., 17 B.R.C. 679, referred to.

The facts are fully set out in the judgment of the Board, dated October 6, 1930. C.R.C., Vol. XXXVII, p. 287.

HALIFAX HARBOUR COMMISSIONERS, *et al* v. CANADIAN NATIONAL RAILWAYS

*Tolls—Wheat—Other Grain—Export—Saint John, N.B., Halifax, N.S.—  
Unreasonableness—Differential Rate—Mileage—Competition—  
Board's Function—Dismissal*

The Halifax Harbour Commissioners, *et al*, applied to the Board for an order disallowing the existing rate of 35½ cents per 100 pounds on wheat, and 34 cents per 100 pounds on other grain, and directing that there be published, in substitution thereof, a rate of 19.34 cents per 100 pounds on all grain for export from Port Arthur, Fort William and Armstrong, Ont., to Saint John, N.B., and Halifax, N.S.

In support of the application it was contended: (1) that the rates on grain for export from Fort William, Port Arthur and Armstrong, Ont., to Halifax and Saint John were excessive and out of line with the rate of 18·34 cents per 100 pounds on all grain from the same points to Quebec; (2) that all ports in Canada capable of being used for the export of grain and flour, have had extended to them the low Crowsnest Pass agreement rates, except the ports of Halifax and Saint John; (3) that without these rates it is impossible for the applicants fully to develop the business of their ports; (4) that by Order in Council, P.C. 886, of June 5, 1925, the Board is to establish a railway rate structure which would among other things encourage the movement of traffic through Canadian ports; (5) that the National Transcontinental Railway Act (3 Edward VII, c. 71) prescribes that the through rate on export traffic from point of origin to point of destination, shall at no time be greater via Canadian Ports than via United States ports; and (6) that the cities of Halifax and Saint John were entitled to the rate to Quebec plus the previously existing arbitrary of one cent per 100 pounds.

Upon hearing the evidence adduced at the sittings of the Board in Halifax, N.S., Saint John, N.B., and Ottawa, Ont., and upon hearing the arguments of counsel for the applicants and the railway companies, the Board dismissed the application upon the following grounds:—

1. The one cent differential or arbitrary added to the rate to Quebec in arriving at the rate to Halifax and Saint John, which was in its origin concerned with port equalization and competitive with the rate from Duluth, Minn., to New York and other North Atlantic ports, does not afford a necessary measure of a reasonable charge for the distance from Quebec to Saint John or to Halifax.

2. That mileage is a factor in the determination of a reasonable basis of rates and more weight must be given to the element of distance by a regulative tribunal than is obligatory in the case of the railway companies.

3. That while the burden is on the railway company to maintain reasonable rates, it may or may not in its discretion meet the competition of short line mileage.

4. That a railway company may, to such extent as seems proper to it, meet the competition of water carriers and whether or not it shall do so is within its discretion.

5. That the powers of the Board are regulative and not managerial. It is not the Board's function, as delegated by Parliament, to make rates to develop business, but to deal with the reasonableness of rates, either on complaint or of its own motion.

6. That a railway may establish rates to equalize ports but the Board has no power to do so.

7. That the existing rate structure was not a handicap to the shipment of grain through the ports of Halifax and Saint John; the situation was governed by conditions in the grain trade, ocean shipping and port facilities.

8. That the Board may consider statutes and agreements relating to rates, but is not bound by the provisions thereof, except as regards the Crowsnest Pass Agreement Act under section 325, subsection 5, of the Railway Act.

Chief Commissioner McKeown and Commissioner Norris, dissenting held that the rate of 19·34 cents per 100 pounds on all grain for export from Port Arthur, Fort William and Armstrong, Ont., to Saint John, N.B., and Halifax, N.S., should be granted upon the ground that such rate was not lower than the prevailing rate from Fort William and Port Arthur via Buffalo to United States seaports, and that equality in rates via these routes was clearly contemplated in the agreement made under the Transcontinental Railway Act, 3 Edward VII, Chapter 71 (1903), Section 42, of which stated "that the through rate on export

traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than United States ports."

General Rates Investigation, 33 C.R.C. 127, and Canadian National Rys. v. Quebec Harbour Commissioners, *et al*, 36 C.R.C. 87, referred to.

The facts are fully set out in the judgments of the Assistant Chief Commissioner, concurred in by Mr. Commissioner Lawrence; the Deputy Chief Commissioner, concurred in by Mr. Commissioner Stoneman; and the Chief Commissioner, concurred in by Mr. Commissioner Norris; dated, respectively, September 24, October 27, and August, 1930. C.R.C., Vol. XXXVII, p. 247.

## APPEALS FROM RULINGS OF THE BOARD

There were four cases carried in appeal to the Supreme Court during the year, namely:—

1. British Columbia Electric Railway Company from Board's Order No. 42808, dated June 10, 1929. Question of jurisdiction.—*Pending*.

2. Government of Alberta from Board's Order No. 45846, dated November 25, 1930, *re* tariffs on grain and flour to Fort William, Westport and Armstrong and to Vancouver. Question of law.—*Pending*.

3. The Montreal Light, Heat and Power Consolidated and the Bell Telephone Company of Canada from Board's Order No. 45410, dated September 16, 1930, in the matter of subway at d'Argenson street, in the city of Montreal, P.Q. Question of law.—*Pending*.

4. The Montreal Light, Heat and Power Consolidated and the Bell Telephone Company of Canada from Board's Order No. 45427, dated September 16, 1930, in the matter of subway on Saint Antoine street, in the city of Montreal, P.Q. Question of law.—*Pending*.

There were no cases carried in appeal to the Governor General in Council.

## ORDERS, GENERAL ORDERS AND CIRCULARS

The total number of orders issued for the year ending December 31, 1930, was 1,923. The number of general circulars issued by the Board, directed to all the railway companies subject to its jurisdiction, was 4. The general orders as distinguished from other orders of the Board are those affecting all railway companies subject to its jurisdiction, and are 7 in number for the year.

A list of the general orders and circulars for the year ending December 31, 1930, will be found compiled under appendix "F" to this report.

## APPLICATIONS TO THE BOARD

The total number of applications, including informal complaints made to the Board for the year ending December 31, 1930, was 3,664.

## TRAFFIC DEPARTMENT OF THE BOARD

In the Traffic Department of the Board the number of tariffs received and filed for the year ending December 31, 1930, was as follows:—

Freight tariffs, including supplements.....	24,805
Passenger tariffs, including supplements.....	7,421
Express tariffs, including supplements.....	1,474
Telephone tariffs, including supplements.....	793
Sleeping and parlour car tariffs, including supplements.....	75
Telegraph tariffs and supplements.....	7
Bridge tolls, including supplements.....	12
	<hr/>
	34,587

The total number of tariffs filed from February 1, 1904, to December 31, 1930, was 1,612,825.

The details of the tariffs will be found under appendix "A" to this report.

## ENGINEERING DEPARTMENT OF THE BOARD

In the Engineering Department of the Board a large number of inspections were made covering the whole Dominion. These inspections for the year ending December 31, 1930, number 260, and cover inspections for the opening of a railway for the carriage of traffic, inspections of culverts, highway crossings, cattle guards, road crossings, bridges, subways and general inspections falling within the scope of the work of the Engineering Department.

Under appendix "B" will be found a detailed report of the Chief Engineer.

## OPERATING DEPARTMENT OF THE BOARD

Under the work of this department is included the inspection of locomotive boilers and their appurtenances, the inspection of safety appliances on cars and locomotives, the investigations into accidents causing personal injury or loss of life, the reporting on the locations of stations, matters of protection at highway crossings, and train and station services performed by the railway companies.

Under appendix "C" will be found a full and detailed report of the Chief Operating Officer of the department.

## ACCIDENTS AND ACCIDENT INVESTIGATIONS

On reference to the report of the Board's Chief Operating Officer, it will be seen that accidents to the number of 2,427, covering 425 persons killed and 2,512 persons injured, were reported to the Board during the year ending December 31, 1930, as compared with 2,780 accidents reported for the year 1929, covering 426 persons killed and 2,954 persons injured.

The figures given show:—

(1) Sixteen passengers killed during the year 1929, and 17 passengers killed during the year 1930, an increase of 1. The number of passengers injured was 349 as compared with 308 in 1930, a decrease of 41.

(2) One hundred and five employees killed in 1929 and 95 in 1930; a decrease of 10. The number of employees injured was 1,891 in 1929, as compared with 1,462 in 1930, a decrease of 429.

(3) Three hundred and five others killed in 1929 and 313 in 1930; an increase of 8. The number of others injured was 714 in 1929, as compared with 742 in 1930; an increase of 28.

It is pointed out that out of the 313 others killed 168, or 53 per cent, were trespassers, and that out of the 742 others injured 205, or 27 per cent, were trespassers.

It will be noted that of what may be termed preventable loss there were 168 killed under the heading "trespassers," and 205 injured. This is an increase of 26 in the number of killed and an increase of 69 in the number of injured, as compared with the year 1929.

The following table shows the total, by provinces, as regards trespassers killed and injured, for the year ending December 31, 1930:—

Province	Killed	Injured
Nova Scotia . . . . .	5	8
New Brunswick . . . . .	7	12
Quebec . . . . .	23	26
Ontario . . . . .	67	61
Manitoba . . . . .	18	20
Saskatchewan . . . . .	19	29
Alberta . . . . .	12	25
British Columbia . . . . .	17	24
Totals . . . . .	168	205

Attention is again directed to statement No. 15, setting out in detail the situation as regards highway crossing accidents during the past five years. It will be observed therefrom that there has been a total of 1,700 accidents, covering 657 persons killed and 2,235 injured.

Crossings protected by gates accounted for 22 persons killed and 76 injured. Crossings protected by bell accounted for 94 killed and 250 injured. Crossings protected by lightning flash signal accounted for four injured. Crossings protected by watchman accounted for 11 killed and 55 injured. Crossings unprotected accounted for 530 killed and 1,850 injured.

There have been 340 accidents at protected crossings, covering 127 persons killed and 385 injured, and at unprotected crossings there have been 1,360 accidents, covering 530 persons killed and 1,850 injured.

During the year 1930 there were 338 highway crossing accidents investigated, of which 57 occurred at protected crossings, leaving unprotected crossings to account for 281 accidents.

Automobile accidents totalled 289, divided as follows:—

At crossings protected by gates . . . . .	8
At crossings protected by watchman . . . . .	nil
At crossings protected by bell . . . . .	31
At crossings protected by lightning flash signal . . . . .	1
At crossings unprotected . . . . .	249

Steam roller accidents numbered 1, made up as follows:—

Unprotected . . . . .	1
-----------------------	---

Bicycle accidents numbered 3, made up as follows:—

Unprotected . . . . .	3
-----------------------	---

Horse and rig accidents numbered 20, made up as follows:—

Gates . . . . .	Nil
Watchman . . . . .	Nil
Bell . . . . .	3
Unprotected . . . . .	17

Pedestrian accidents numbered 25, as follows:—

Gates . . . . .	7
Watchman . . . . .	Nil
Bell . . . . .	5
Unprotected . . . . .	13

During the year 1930 there were 342 accidents at highway crossings reported to the Board, covering 116 persons killed and 470 injured, as compared with 382 accidents in 1929, covering 140 persons killed and 495 injured.

Full particulars of passengers and employees killed and injured, and other general information in regard to trespassers killed and injured, accidents at protected and unprotected crossings, etc., will be found under appendix "C".

## FIRE INSPECTION DEPARTMENT OF THE BOARD

The report of the Board's Fire Inspection Department indicates that a total of 668 fires attributed to railways occurred on 14,209 miles of line classified as running through forested territory.

Of this total, 233 fires were of an incipient character, burning over less than one-fourth acre each and causing no damage, 325 fires burned over an area of one-fourth acre to ten acres each, and 110 fires burned over an area of more than 10 acres each.

These fires burned over a total of 48,742 acres of land, with damage to young forest growth, standing timber, forest products and other property estimated at \$103,630. Of this amount the value of standing timber and young forest growth is estimated at \$76,846.

The majority of the area burned over and monetary loss occurred in Nova Scotia, western Ontario and northern Saskatchewan, due to drought, low humidity, high temperature and wind.

In accordance with requirements issued by the Chief Fire Inspector under General Order 362, the railways maintain some form of special patrol on 7,610 miles of line, necessitating the special attention to fire patrol of a total of 1,009 special fire patrolmen.

In accordance with the Board's fire-guard requirements, the railways constructed or maintained 5,878 miles of fire-guards, in uncultivated lands, in non-forested sections of the Prairie Provinces.

The fire protective appliances on 3,718 locomotives were inspected by officers of the department during the season.

In co-operation with the forest protective organizations of the Dominion and Provincial Governments, 188 officials of such organizations were deputized to act as ex-officio officers of the Board's Fire Inspection Department during 1930.

Under appendix "D" will be found the Chief Fire Inspector's report.

## ROUTINE WORK OF THE BOARD

## RECORD DEPARTMENT

Below is given a table setting forth the number of applications, filings and letters received during the year ending December 31, 1930, together with the number of orders issued:—

Number of applications made.....	3,664
Number of filings received during the year.....	62,290
Number of outgoing letters during the year.....	26,715
Number of orders issued during the year.....	1,923

## APPENDIX "A"

REPORT OF THE CHIEF TRAFFIC OFFICER OF THE BOARD FOR THE  
YEAR ENDING DECEMBER 31, 1930

DEAR SIR,—I submit for the Board's Twenty-sixth Report information regarding work of the Traffic Department.

The number of freight, passenger, express, telephone, telegraph, sleeping and parlour car, and bridge toll schedules filed with the Board was as follows:—

FROM NOVEMBER 1, 1904, TO AND INCLUDING DECEMBER 31, 1929

Freight—			
Local tariffs.....	20,238		
Supplements.....	42,335		
		62,573	
Joint tariffs.....	46,348		
Supplements.....	195,337		
		241,685

## MARITIME ACCOUNTS

The information given below, regarding the work in connection with settlement of accounts under the Maritime Freight Rates Act, covers the period July, 1929, to June, 1930, inclusive.

During this period there were filed 23,412 abstract sheets with an average of 74 rates per sheet. There were therefore 1,732,488 rates and 866,244 extensions checked, and 23,412 columns of figures added.

As a result of this check it was necessary to issue 5,421 corrections, an average of 452 per month.

The total additions to the accounts amounted to \$2,360.08 and the total deductions \$23,189.51.

The total amount claimed by railway companies was \$841,412.90 and the amount allowed was \$820,583.47, or a net deduction of \$20,829.43.

The number of outgoing letters in connection with the administration of the Act, July 1, 1929, to June 30, 1930, was as follows:—

Board .....	40
Railways.....	1,004
Others .....	85

During this period 155 orders were issued approving tariffs or rates and certifying to the normal tolls.

The number of communications to railways, express, telephone and telegraph companies in connection with complaints, proper interpretation of tariffs, or classification and filing of same, also in connection with powers of attorney, concurrences, etc., was 533. Communications to others were 967, or a total of 1,500.

The following is a list of traffic orders issued, also a list of orders approving connecting agreements or service station contracts between the Bell Telephone Company and named local telephone companies:—

## TRAFFIC ORDERS

No. 44137, January 4. Dismissing complaint of the Fort Erie Business Men's Club, Council of Town of Bridgeburg, Ont., and Niagara Frontier Chamber of Commerce, against the bridge tolls charged by the Buffalo and Fort Erie Public Bridge Company on the Peace bridge between Buffalo and Fort Erie.

No. 44143, January 3. Approving Buffalo and Fort Erie Public Bridge Company by-law, dated May 18, 1927, authorizing the president, vice-presidents and secretary to prepare and issue tariffs of tolls.

No. 44245, January 23. Approving Supplement No. 11 to Express Classification for Canada No. 7.

No. 44271, February 1. Approving by-law No. 12 of the Niagara Lower Arch Bridge Company, Limited, authorizing the secretary of the company to prepare and issue tariffs of tolls.

No. 44326, February 13. Authorizing the Canadian National Railways to prosecute J. and D. A. Harquail Company, Limited, of Campbellton, N.B., for alleged fraudulent billing of certain shipments of freight.

No. 44370, February 24. Approving Canadian National Railways Standard Passenger Tariff C.R.C. No. E-1160 and No. W-1267; effective March 17, 1930.

No. 44386, February 26. Approving Buffalo and Fort Erie Bridge Company Tariff C.R.C. No. 1 containing tolls to be charged for use of Peace bridge between Fort Erie and Buffalo.

No. 44417, March 7. Dismissing application of the British Columbia Electric Railway and Canadian Pacific Railway that the Board review and rescind Order No. 42808 directing that joint rates be published between stations on the Vancouver and Lulu Island Railway and points on the Canadian National Railways, and directing that said Order No. 42808 be confirmed and reinstated to become effective March 15, 1930.

No. 44418, March 8. Approving Supplement No. 12 to Express Classification for Canada No. 7.

No. 44428, March 8. Approving by-law dated February 19, authorizing O. R. Bromley, L. W. Landman, J. W. Switzer, and E. F. Leutchman, to prepare and issue tariffs of tolls of the New York Central Railroad Company.

No. 44449, March 13. Approving Supplement No. 1 to the Canadian Freight Classification No. 18.

No. 44450, March 14. Approving clauses limiting liability appearing on various forms of tickets of the Canadian National Railways.

No. 44501, March 27. Dismissing complaint of the Nichols Chemical Company, Limited, against alleged discrimination in the matter of rate on sulphuric acid from Tadanae, B.C., to Ioco, B.C., via Canadian Pacific Railway.

No. 44581, April 11. On application of the Confederated Freight Association, Toronto, declaring the legal rate in effect at the time certain shipments of rough stone were shipped from Niagara Falls, Ont., to Toronto, Ont., via the Canadian National Railways.

No. 44615, April 23. Authorizing the Canadian National Railways to publish on one day's notice a further supplement to their tariff C.R.C. No. W-619, to correct error in publishing proportional rates on canned goods from International Boundary, Ont., to Calgary and Edmonton, Alta.

No. 44616, April 23. Suspending pending hearing or further order, the tariff provision *re* grain doors for shipments handled in switching service, as contained in item 25-A, supplements 2 and 3 to Canadian National Railways Tariff C.R.C. No. W-850, and item 5-A in supplement 2 to Canadian Pacific Railway Tariff C.R.C. No. W-2927.

No. 44645, April 23. Approving by-law No. 41 of the Lake Erie and Northern Railway authorizing the general manager, general freight agent, and assistant general freight agent, to prepare and issue tariffs of tolls.

No. 44646, April 23. Approving by-law No. 9 of the Grand River Railway authorizing the general manager, general freight and passenger agent, and assistant general freight and passenger agent, to prepare and issue tariffs of tolls.

No. 44656, April 28. Rescinding Order No. 22237, dated July 18, 1914, and Order No. 33938, dated July 27, 1923, which required publication of lumber reconsigning tariffs applicable on lumber and forest products from Ohio and Mississippi River crossings.

No. 44679, May 5. Approving Canadian National Railways by-law No. 16, further amending its by-law No. 3, by deleting therefrom the words "Assistant General Freight Agent, Winnipeg, Man.," and substituting therefor the words "Chief of Tariff Bureau, Winnipeg, Man."

No. 44690, May 8. Authorizing the Fredericton and Grand Lake Coal and Railway Company to reissue, effective May 17, its tariff C.R.C. No. 187, to correct error in showing rate on building brick and hollow building tile from Chipman, N.B., to points in Maine as 12 cents instead of 14 cents.

No. 44760, May 21. Approving by-law of the Detroit International Bridge Company appointing J. L. Fozard, Vice-President and General Manager, and R. B. McDougald, Assistant to the V.P. & G.M., to prepare and issue tariffs of tolls.

No. 44761, May 21. Approving Detroit International Bridge Company Tariff C.R.C. No. 1, covering tolls to be charged in respect of the Ambassador bridge across the Detroit river, between Sandwich and Detroit.

No. 44790, May 28. Directing that the commutation fares published by the Canadian Pacific Railway in their Tariff C.R.C. No. 179 between Saint John, N.B., and stations west thereof, to and including Welsford, N.B., be cancelled, and that there be substituted therefor, effective not later than June 15, revised commutation fares in accordance with Order No. 29152, dated April 1, 1920, and based on the actual distance.

No. 44807, June 2. Approving Supplement No. 13 to Express Classification for Canada No. 7.

No. 44834, June 4. Declaring that with respect to shipments of petroleum products made during the years 1927 and 1928 from Sarnia, Ont., to Chatham, Ont., the Pere Marquette Railway Company is only required to absorb, in making deliveries on the Chatham, Wallaceburg and Lake Erie Railway tracks at Chatham, the amount of interswitching absorption published as applying on non-competitive traffic.

No. 44864, June 5. Directing that item No. 103 in Canadian Pacific Railway Tariff C.R.C. No. E-4126, and item No. 115-C in supplement 50 to Canadian National Railways Tariff C.R.C. No. E-1205, be amended, effective not later than June 30, 1930, to apply also on shipments of grain products, the product of ex-lake grain shipped from lake ports to interior milling points east or south thereof and reshipped from such interior points under milling-in-transit arrangements.

No. 44886, June 20. Directing that express delivery limits in the city of Windsor, Ont., be extended to include that portion of the town of Sandwich adjacent thereto.

No. 44888, June 18. Approving by-law of the Algoma Eastern Railway authorizing general freight agent to prepare and issue freight tariffs, and general passenger agent to prepare and issue passenger tariffs.

No. 45023, July 8. Approving Canadian Pacific Railway proposed new standard contract form for one way interline tickets.

No. 45027, July 8. Approving Wabash Railway Company by-law appointing L. R. Nowotny, Chief of Tariff Bureau, to prepare and issue tariffs of tolls.

No. 45255, August 20. Approving Supplement No. 14 to Express Classification for Canada No. 7.

No. 45309, August 30. Permitting the Canadian Freight Association to publish a supplement to Canadian Freight Association Tariff C.R.C. No. 486, correcting a clerical error and establishing 3rd class rates in connection with item 140 of said tariff.

No. 45324, September 6. Permitting the Canadian National Railways to publish and file Supplement 2 to tariff C.R.C. No. E-1539 on ten days notice.

No. 45350, September 10. Permitting the Canadian Pacific Railway Company to publish and file, on one day's notice, supplements to certain class rate tariffs in so far as concerns some advances in rates contained therein.

No. 45362, September 12. Suspending pending hearing, portion of section 1 of Supplement 26 to Canadian National Railways tariff C.R.C. No. E-1240.

General Order No. 487, September 22. Directing that, effective October 1, solid fibreboard boxes, complying with Container Specifications 23A, 23B, 23C, 23D, and 23E, published in Agent B. W. Dunn's Tariff No. 2, C.R.C. No. 2, may be used for shipping freight over railways in Canada subject to the Board's jurisdiction.

No. 45456 September 24. Permitting the Michigan Central Railroad to issue a supplement to their tariff C.R.C. No. 3511 withdrawing and cancelling the tariff, effective October 15, with respect to rates on coal and coke from United States border points to stations in Canada.

No. 45469, September 24. Approving form of release of liability in respect of travelling on non-passenger cars, for use of Canadian National Railways.

General Order No. 488, October 2. Approving form of release of liability in respect of travelling on non-passenger cars, for use of railway companies subject to the Board's jurisdiction.

No. 45550, October 8. Suspending pending hearing, supplement No. 17 to Canadian Pacific Railway tariff C.R.C. No. W-2902, containing joint rates on coal from the Star Mining Company's mine at Rosedale and the J. D. Thomas Coal Company's mine at Drumheller, to local stations on the Canadian National Railways west of Port Arthur and Fort William.

General Order No. 489, October 14. Directing that, effective October 1, solid fibreboard boxes, complying with Container Specifications 23A, 23B, 23C, 23D, and 23E, published in Agent B. W. Dunn's Tariff No. 2 C.R.C. No. 2, may be used for shipping classes of freight permitted by the said tariff to be shipped in such containers over railways in Canada subject to the Board's jurisdiction, and rescinding General Order No. 487.

No. 45594, October 9. Refusing application of the United Farmers of Alberta for an order directing that existing railway tariffs be revised to allow for two stop-offs for completion of loading of livestock shipments on through billing.

No. 45624, October 22. Approving by-laws of the Detroit and Canada Tunnel Company and Detroit and Windsor Subway Company, authorizing T. B. Pinkard, General Manager, to prepare and issue tariffs of tolls.

No. 45634, October 25. Directing that the period of coal movements from Alberta to Ontario points during the year 1930, be fixed to commence October 25 and to end December 1, 1930, and that a rate of \$6.75 per ton be established.

No. 45638, October 28, 1930. Refusing application of the Halifax Harbour Commission, the Transportation Commission of the Maritime Board of Trade, and the Canadian National Millers' Association, with respect to rates on grain and flour from the head of the lakes to Halifax, Saint John and West Saint John.

No. 45659, October 29. Approving Detroit International Bridge Company tariff C.R.C. No. 3 covering tolls to be charged in respect of the Ambassador Bridge across the Detroit river, between Sandwich and Detroit.

No. 45661, October 29. Approving Detroit and Windsor Subway Company and Detroit and Canada Tunnel Company tariffs C.R.C. numbers 1 and 2, covering tolls to be charged in respect of the Detroit tunnel.

No. 45662, October 29. Approving Vancouver and Lulu Island Railway Standard Mileage Freight Tariff C.R.C. No. 2.

No. 45771, November 17. Directing that the period of coal movements from Alberta to Ontario points during the year 1930-31, as provided for under Order No. 45634, be fixed to commence on the 1st day of December, 1930, and to end on the 31st day of July, 1931, both inclusive.

No. 45778, November 15. Approving Detroit and Windsor Subway Company Tariff C.R.C. No. 3 covering commutation fares of seven-day limit, to be charged in respect of the Detroit tunnel.

No. 45791, November 21. Approving Burrard Inlet Tunnel and Bridge Company by-law authorizing Percy Ward to prepare and issue tariffs of tolls.

No. 45794, November 18. Approving Vancouver and Lulu Island Railway by-law authorizing its freight traffic manager and chief of tariff bureau to prepare and issue freight tariffs, and its passenger traffic manager and general passenger agent to prepare and issue passenger tariffs.

No. 45804, November 21. Refusing application of the Wm. Wrigley Jr. Company, Limited, for an order directing that it be given the benefit of the Buffalo rate, retroactive to the original effective date of such rate, shown in Transcontinental Freight Bureau Tariff C.R.C. No. 541, item 2175 (superseded by Tariff C.R.C. No. 549) on chewing gum and confectionery, in carloads, from Toronto, Ontario, to British Columbia coast points.

No. 45846, November 25. Refusing application of the Government of the Province of Alberta for an order directing that the Canadian National Railways do forthwith publish, file and put into effect tariffs on grain and flour to Fort William, Westport, and Armstrong, Ont., and to Vancouver, B.C.

No. 45862, December 1. Approving British Columbia Electric Railway Standard Freight Mileage Tariff C.R.C. No. 313, in so far as the same has application to the Vancouver, Fraser Valley and Southern Railway.

No. 45892, December 5. Directing that H. G. Toll, Agent of the Trans-continental Freight Bureau, be permitted to file, upon twenty days' notice, effective January 1, 1931, supplements to his Tariffs C.R.C. numbers 563, 566, 571, and 573, increasing rates on grain, grain products, and seeds.

No. 45936, December 11. Granting leave to the Government of the Province of Alberta to appeal to the Supreme Court of Canada from Order of the Board No. 45846, dated November 25, 1930.

No. 45943, December 16. Authorizing the Canadian National Railways to supplement their Tariffs C.R.C. No. W-542 and C.R.C. No. W-448, on one day's notice, publishing amended distributing class rates from North Battleford, Battleford, Camrose, Calgary, and Edmonton to stations on the Flin Flon and Sherridon Subdivisions; also on petroleum and products, Calgary to the same points, establishing rates on the proper basis in lieu of the rates erroneously published in supplement 26 to Tariff C.R.C. No. W-542 and supplement 32 to Tariff C.R.C. No. W-488.

No. 45973, December 20. Suspending pending further hearing, items in supplement No. 45 to Canadian National Railways Tariff C.R.C. No. E-1283 and supplement No. 198 to Canadian Pacific Railway Tariff C.R.C. No. E-3832, which provide, effective December 22, 1930, for the exclusion of scrap iron rates on crossings, frogs, switches, and switch points.

## APPENDIX "B"

REPORT OF THE CHIEF ENGINEER OF THE BOARD FOR THE  
YEAR ENDING DECEMBER 31, 1930

February 20, 1931.

A. D. CARTWRIGHT, Esq.,  
Secretary, Board of Railway Commissioners for Canada,  
Ottawa, Ont.

SIR,—I have the honour to submit herewith synopsis of my annual report as to the work of the Engineering Department of the Board during the year 1930.

Yours truly,

T. L. SIMMONS,  
*Chief Engineer.*

## ROUTE MAPS

Approval of general location of Canadian Pacific Railway in city of North Battleford, Sask., from east side of Donald street to a point on southwest side of Melgund avenue, a distance of 0·54 miles.

Approval of general location of Grande Prairie branch of the Northern Alberta Railway from section 22, tp. 73, r. 11, W. 6 M., mile 89·69, to sec. 7, tp. 75, r. 13, W. 6 M., mile 112·05, province of Alberta.

Approval of general location of the Dunelm Southwesterly branch of the Canadian Pacific Railway from Dunelm, mile 0, to sec. 6, tp. 11, r. 15, W. 3 M., mile 31, province of Saskatchewan.

Approval of general location of the Detroit Windsor Subway Company through lot 112 in city of Windsor, province of Ontario.

Approval of general location of the Canadian Pacific Railway, Isle Perrot branch, from Vaudreuil at mile 0·0 to mile 7·5, parish of Ste. Jeanne de l'Isle Perrot.

Approval of general location of the Wolfe Cove branch, Canadian Pacific Railway, mile 0·0 to 1·60, in city of Quebec, province of Quebec.

Approval of general location of the Swift Current Southeasterly branch of the Canadian Pacific Railway from mile 44·28 to 75·42, province of Saskatchewan.

Approval of general location of route of the Tuffnell-Prince Albert branch of the Canadian Pacific Railway from sec. 29, tp. 51, r. 23, W 2 M., mile 205·5, province of Saskatchewan.

Approval of revised general location of the Rosetown Southeasterly branch of the Canadian Pacific Railway from mile 0 to 3·0, province of Saskatchewan.

## LOCATIONS

Approval of location of Canadian Pacific Railway from a point in northeast quarter of section 5, tp. 44, r. 16, W. 3 M., at mile 0·0 to a point on the southerly limit of Melgund avenue, North Battleford, Saskatchewan, at mile 0·54.

Approval of a portion of the location of the Canadian Pacific Railway from sec. 24, tp. 49, r. 1, W. 5 M., at mile 94·64, to sec. 26, tp. 49, r. 25, W. 4 M., at mile 113·89, province of Alberta.

Approval of location of a portion of the Fife Lake Westerly branch of the Canadian Pacific Railway from mile 0·67 to sec. 7, tp. 2, r. 3, W. 3 M., at mile 26·6, province of Saskatchewan.

Approval of location of the Asquith-Cloan branch of the Canadian Pacific Railway from sec. 32, tp. 19, r. 12, W. 3 M., mile 29·79, to sec. 27, tp. 41, r. 14, W. 3 M., mile 46·32, province of Saskatchewan.

Approval of location of the Cedar Rapids Manufacturing Company from the Power House in the parish of St. Joseph de Cedres, to north shore of the St. Lawrence River at Ville La Salle, P.Q.

Approval of location of the Acme Northwesterly branch of the Canadian Pacific Railway from sec. 32, tp. 39, r. 2, W. 4 M., mile 0·0 to sec. 35, tp. 33, r. 26, W. 4 M., at mile 28·55, province of Alberta.

Approval of location of the Crossfield Northwesterly branch of the Canadian Pacific Railway from sec. 23, tp. 28, r. 1, W. 5 M., mile 0·0, to sec. 8, tp. 31, r. 4, W. 5 M., mile 36·19, province of Alberta.

Approval of location of the Dunelm Southwesterly branch of the Canadian Pacific Railway from sec. 26, tp. 14, r. 14, W. 3 M., mile 0, to sec. 6, tp. 11, r. 16, W. 3 M., mile 31·02, province of Saskatchewan.

Approval of location of the Prince Albert-Lac la Biche branch of the Canadian Pacific Railway (Debden to Meadow Lake) from sec. 31, tp. 52, r. 6, W. 3 M., mile 0·0, to Sec. 1, tp. 60, r. 18, W. 3 M., mile 99·03, province of Saskatchewan.

Approval of location of the Peace River branch of the Northern Alberta Railway from mile 98·0 to 114·74, province of Alberta.

Approval of location of Wolfe Cove branch of the Canadian Pacific Railway in Cadastral 2445, parish of St. Sauveur, at mile 0, to a connection with line of the Quebec Harbour Commissioners at mile 1·51 in lot Cadastral No. 232, parish of St. Colomb de Sillery, county of Quebec, province of Quebec.

Approval of location of the Grande Prairie branch of the Northern Alberta Railway from mile 112·05 to 139·01, province of Alberta.

Approval of location of the Tuffnell-Prince Albert branch of the Canadian Pacific Railway from mile 193·42 to 203·96, province of Saskatchewan.

#### REVISED LOCATION

Approval of revised location of the Canadian Pacific Railway, Bromhead Westerly branch, from sec. 21, tp. 2, r. 17, W. 2 M., at mile 26·81, to sec. 34, tp. 2, r. 20, W. 2 M., at mile 45·57, province of Saskatchewan.

Approval of revised location of the Canadian Pacific Railway, Suffield-Blackie branch, from sec. 35, tp. 20, r. 24, W. 4 M., at mile 126·63, to sec. 4, tp. 19, r. 26, W. 4 M., at mile 147·0, province of Alberta.

Approval of revised location of a portion of the Fife Lake westerly branch of the Canadian Pacific Railway from sec. 3, tp. 3, r. 30, W. 2 M., at mile 0·42, to mile 0·67, province of Saskatchewan.

Approval of revised location of the Grande Prairie branch of the Northern Alberta Railway from Hythe, Alta., to tp. 78, r. 15, W. 6 M., province of British Columbia.

Approval of revised location of the Vancouver, Victoria & Eastern Railway in town of Grand Forks, B.C.

Approval of revised location of the Lanigan-Prince Albert branch of the Canadian Pacific Railway from sec. 33, tp. 41, r. 24, W. 2 M., at mile 57·25, to sec. 21, tp. 46 A., r. 25, W. 2 M., at mile 93·87, province of Saskatchewan.

Approval of revised location of the Langdon North branch of the Canadian Pacific Railway from sec. 31, tp. 28, r. 19, W. 4 M., at mile 82·97, to sec. 15, tp. 28, r. 19, W. 4 M., at mile 86·86, province of Alberta.

Approval of revised location of the Lanigan-Prince Albert branch of Canadian Pacific Railway from sec. 24, tp. 37, r. 23, W. 2 M., mile 24·92, to sec. 33, tp. 41, r. 24, W. 2 M., mile 57·25, province of Saskatchewan.

Approval of revised location of the Tuffnell-Prince Albert branch of the Canadian Pacific Railway from sec. 13, tp. 52, r. 18, W. 2 M., mile 157·86, to sec. 2, tp. 52, r. 22, W. 2 M., mile 183·42, province of Saskatchewan.

Approval of revised location of the Crossfield Northwesterly branch from sec. 28, tp. 28, r. 1, W. 5 M., mile 2·19, to sec. 24, tp. 28, r. 2, W. 5 M., mile 5·37, province of Alberta.

Approval of revised location of the Canadian Pacific Railway (Debden to Meadow Lake) from sec. 31, tp. 52, r. 6, W. 3 M., mile 0·0, to sec. 33, tp. 52, r. 7, W. 3 M., mile 3·58, province of Saskatchewan.

Approval of revised location of the Swift Current Southeasterly branch of Canadian Pacific Railway from sec. 11, tp. 11, r. 10, W. 3 M., mile 44·84, to sec. 23, tp. 8, r. 7, W. 3 M., mile 75·42, province of Saskatchewan.

Approval of revised location of the Debden-Meadow Lake branch of the Canadian Pacific Railway from mile 12·65 to 16·49, province of Saskatchewan.

Approval of revised location of Lacombe and Northwestern Railway (Canadian Pacific Railway) from sec. 14, tp. 49, r. 1, W. 5 M., mile 92·17, to sec. 26, tp. 49, r. 25, W. 4 M., mile 112·49, province of Alberta.

Approval of revised location of the Asquith-Cloan branch of the Canadian Pacific Railway from sec. 32, tp. 39, r. 12, W. 3 M., mile 29·45, to sec. 23, tp. 41, r. 14, W. 3 M., mile 44·25, province of Saskatchewan.

Approval of revised location of the Tuffnell-Prince Albert branch of the Canadian Pacific Railway from sec. 33, tp. 51, r. 23, W. 2 M., mile 191·93, to mile 193·42, province of Saskatchewan.

#### RAILWAY CROSSINGS

Crossing of Canadian National Railways by the second track of the Canadian Pacific Railway by means of an under-crossing in lot 6, con. 4, tp. of McKim, district of Sudbury, province of Ontario, at mile 79·95, Cartier Subdivision.

Crossing of the Canadian National Railways by the tracks of the Beauharnois Construction Company at mile 45·25, Alexandria Subdivision.

Crossing of the Canadian National Railways by the tracks of the New Brunswick Power Company at mile 86·7, Sussex Subdivision, province of New Brunswick.

Crossing of tracks of Montreal Tramways Company by the Canadian National Railways at a point opposite lot 923, parish of Lachine, province of Quebec.

Crossing of the track of Canadian National Railways by the double track of the Winnipeg Electric Railway on Tache avenue, city of St. Boniface, Man.

Undercrossing of the tracks of the New York Central Railroad by the Beauharnois Construction Company's tracks at the west end of the bridge over the St. Louis river, at Beauharnois, P.Q.

Crossing of the Cudworth Subdivision by the Melfort-Aberdeen Subdivision of the Canadian National Railways, in sec. 30, tp. 42, r. 26, W. 2 M., province of Saskatchewan.

Crossing of the tracks of the Champlain Market Branch of the Canadian National Railways by the Wolfe Cove Branch of the Canadian Pacific Railway in lot cadastral No. 232, parish of St. Colomb de Sillery, province of Quebec.

Crossing of the Montreal and Southern Counties Railway by the Canadian National Railways on Common street, Montreal, P.Q.

Crossing of the main line of the Canadian National Railways and the tracks of the Canadian Pacific Railway by means of a bridge 13·5 miles west of city of Montreal, P.Q., in the town of Pointe Claire, P.Q., by the Pointe Claire Branch of the Canadian National Railways.

Crossing of the tracks of the Canadian National Railways by the tracks of the Eagle Lake Spruce Mills at Giscome, B.C.

Crossing of the Hamilton Street Railway by the Toronto, Hamilton and Buffalo Railway, on Kenilworth avenue, Hamilton, Ont.

Crossing of the tracks of the Vancouver and Lulu Island Railway by the tracks of the Canadian National Railways at New Westminster, B.C.

#### INTERLOCKING PLANTS

Installation of diamond at crossing of Essex Terminal Railway and the Michigan Central Railway in city of Windsor, Ont.

Installation of half interlocking plant at crossing of tracks of the Montreal Tramways Company by the Canadian National Railways at a point opposite lot 923, parish of Lachine, province of Quebec.

Installation of half interlocking plant at crossing of Canadian National Railways by the Algoma Central and Hudson Bay Railway at mile 80·54, Port Arthur-Sudbury Branch, province of Ontario.

Installation of automatic electric interlocking plant at crossing of Michigan Central Railway by the Pere Marquette Railway at Leamington, Ont.

Installation of track and signal arrangement of automatic interlocking plant at crossing of the Michigan Central Railway by the Pere Marquette Railway at McGregor, Ont.

Installation of interlocking plant at Bridge No. 6 over the new Welland canal at Merritton, Ont., by the Canadian National Railways.

Installation of interlocking plant at Drawbridge No. 70, at the Serpentine river, one and one-half miles south of Colebrook, B.C., by the Great Northern Railway.

#### OPERATION OF INTERLOCKING PLANTS

Operation of interlocking plant at crossing of Canadian National Railways and Canadian Pacific Railway at Cobourg, Ont., mileage 32·67, Oshawa Subdivision.

Operation of interlocking plant at crossing of the Canadian Pacific Railway with the Canadian National Railways at Whitby, Ont., mile 76·10, Oshawa Subdivision.

Operation of interlocking plant at crossing of the Canadian National Railways by the Lanigan-Prince Albert Branch of the Canadian Pacific Railway at mile 60·19, province of Saskatchewan.

Operation of interlocking plant at crossing of the Beauharnois Construction Company's tracks by the Canadian National Railways at mile 45·23, Alexandria Subdivision.

Operation of interlocking plant at crossing of Canadian Pacific Railway and Canadian National Railways at Bucke, Ont., mileage 112·0, Galt Subdivision.

Operation of interlocking plant at crossing Michigan Central Railway by the Canadian National Railways at Niagara Falls, Ont.

Operation of interlocking plant at crossing of Napierville Junction Railway and the Canadian National Railways at Lacolle, P.Q.

Operation of interlocking plant at crossing Montreal Tramways by the Canadian Pacific Railway at Papineau avenue, Montreal, P.Q.

Operation of interlocking plant at crossing of London Street Railway by the Canadian Pacific Railway at Richmond street, London, Ont.

Operation of interlocking plant at crossing of the Toronto, Hamilton and Buffalo Railway by the Lake Erie and Northern Ontario Railway at Brantford, Ont.

## INTERCHANGE TRACKS

Approval of interchange tracks between the Canadian Pacific Railway and the Canadian National Railways at Penticton, B.C.

Approval of interchange track between the Canadian National Railways and the Canadian Pacific Railway in town of Arnprior.

Approval of interchange track between the Canadian National Railways and Canadian Pacific Railway at Prince Albert, Sask.

Approval of interchange tracks between Canadian National Railways and Canadian Pacific Railway at North Battleford, Sask.

## OPERATION OF BRIDGES

Operation of bridge over the provincial highway at mile 26.3, Montford Subdivision, Canadian National Railways, in parish of St. Sauveur, province of Quebec.

Operation of bridge over James street, Hamilton, Ontario, by the Canadian National Railways.

Operation of bridge over Bay street, Hamilton, Ont., by the Canadian National Railways.

Operation of bridge over John street, Hamilton, Ont., by the Canadian National Railways.

Operation of bridge over Catharine street, Hamilton, Ont., by the Canadian National Railways.

Operation of bridge east of Shannonville station, province of Ontario, by the Canadian National Railways.

Operation of bridge on the Weston road, in town of Weston, Ont., by the Canadian National Railways.

Operation of bridge No. 10, Welland ship canal, by Canadian National Railways, at Thorold, Ont.

Operation of bridge at Bedford street, Brantford, Ont., by the Canadian National Railways.

Operation of bridge No. 110.51 over the Kettle creek, just west of St. Thomas, Ont., by the Michigan Central Railway.

Operation of Bridge No. 6 over the new Welland canal at Merritton, Ont., by the Canadian National Railways.

Operation of Lift Bridge No. 10 over the new Welland canal at Thorold, Ont., by the Canadian National Railways.

## RAILWAY CONNECTIONS

Connection between Canadian National Railways and Canadian Pacific Railway in northeast quarter of sec. 5, tp. 44, r. 16, W. 3 M., at mile 0.0.

Connection between spur to serve the Canada Crushed Stone Company at Dundas, Ont., and branch line of the Canadian National Railways.

Connection between logging railway of the Fairservice-Gierin Timber Company and the Canadian Northern Pacific Railway at mile 10.18 Cowichan Subdivision, Vancouver island.

Connection between Canadian Pacific Railway and the tracks of Thompson, McDonald & McDonald, Ltd., in SE.  $\frac{1}{4}$  sec. 8, tp. 12, r. 26, W. 6 M., at mile 113.5, Thompson Subdivision, province of British Columbia.

Connection between Canadian National Railway spur and the Canadian Pacific Railway in lot G, city of Calgary, province of Alberta.

Connection between Canadian Pacific Railway (Debden-Meadow Lake Branch) and the Canadian National Railways in sec. 31, tp. 52, r. 6, W. 3 M., province of Saskatchewan.

Connection between the tracks of the Truax Traer Coal Company and the Canadian Pacific Railway at mile 140.2, Portal Subdivision, province of Alberta.

Connection between the Bulwark East Branch of the Canadian National Railways with the Swift Current Northwesterly Branch of the Canadian Pacific Railway in sec. 6, tp. 38, and sec. 31, tp. 37, r. 11, W. 4 M., province of Alberta.

Connection between two additional tracks of the Canadian National Railway and the tracks of the Canadian Pacific Railway east of the wharf at Vancouver, B.C.

Connection between the Iberville Subdivision of the Canadian National Railways and the Central Vermont Railway at Iberville, P.Q.

#### OPENING FOR TRAFFIC

Opening for traffic of the Lloydminster Northeasterly Branch of the Canadian Pacific Railway from mile 0.00 to 24.5, in the province of Saskatchewan.

Opening for traffic of a portion of the Suffield-Blackie Branch of the Canadian Pacific Railway from mile 124.65 to 147.0, province of Alberta.

Opening for traffic of the Acme Northwesterly Branch of the Canadian Pacific Railway from mile 0.0 to 28.9, in the province of Alberta.

Opening for traffic of the revised location of the Canadian National Railways from mile 80.24 to 80.75, Albreda Subdivision, in the province of British Columbia.

Opening for traffic of a branch line of the Canadian Pacific Railway from a point on the Lloydminster Subdivision, near Cutknife, Saskatchewan, at mile 0.0, to a connection with the tracks of the Canadian National Railways, Caruthers Subdivision, in section 1, township 44, range 21, W. 3rd Mer., in the province of Saskatchewan.

Opening for traffic of the revised location of the Canadian National Railways across the Sumas river, in the province of British Columbia, between mileage 78.49 and 78.98, in the province of British Columbia.

Opening for traffic of the Mawer Southwesterly Branch of the Canadian National Railways from mile 0.0 at junction of said branch with the Central Butte Branch of the Grand Trunk Pacific Railway at mile 86.49, southwesterly to present end of track, a distance of 35.0 miles, in the province of Saskatchewan.

Opening for traffic of the Lanigan-Prince Albert Branch of the Canadian Pacific Railway from mile 0.0 to 94.42, near Fenton, in the province of Saskatchewan.

Opening for traffic of the Willowbrook Northwesterly Branch of the Canadian National Railways from end of operated line at mile 89.92, Tonkin Subdivision, to end of track at Crowtherview, Sask., a distance of 22.45 miles.

Opening for traffic of the Canadian National Railways between Lake Verde and Pesquid Junction, in the province of Prince Edward Island.

Opening for traffic of the Turtleford Southeasterly Branch of the Canadian National Railways from Rabbit lake, mile 65.50 to junction with Blaine Lake Subdivision, at Speers, Sask., mile 95.35, a distance of 36.40 miles.

Opening for traffic of the Spruce Lake Westerly Branch of the Canadian National Railways from a junction with the Turtleford Subdivision, mile 71.87, to end of track at Frenchman Butte, Sask.

Opening for traffic of the Swift Current Northwesterly Branch of the Canadian Pacific Railway between Youngstown and Coronation, mile 187.54 to 227.04, in the province of Alberta.

Opening for traffic of the Archive-Wymark Branch of the Canadian Pacific Railway, mile 0.0 to 38.68, in the province of Saskatchewan.

Opening for traffic of the Sturgis-Peesane Branch of the Canadian National Railways from mile 39.60 (Reserve) northwesterly a distance of 31.07 miles, to a point distant 29.0 miles southeasterly from a junction with the Tisdale

Subdivision of the Canadian National Railways at Crooked River in the province of Saskatchewan.

Opening for traffic of a portion of the Melfort-Aberdeen Branch of the Canadian National Railways from a junction with the St. Brieux Subdivision of the Canadian National Railways at mile 1·91 (near Melfort, Sask.) to junction with the Langham Subdivision of the Canadian National Railways at mile 52·06 (near Aberdeen, Sask.) a distance of 87·60 miles.

Opening for traffic of the Langdon North Branch of the Canadian Pacific Railway (Acme-Empress) from mile 84·46 to 86·86, in the province of Alberta.

Opening for traffic of the Elk Point Easterly Branch of the Canadian National Railways from mile 141·73 Coronado Branch, to end of track at mile 161·27, a distance of 19·54 miles, in the province of Alberta.

Opening for traffic of vehicular subway from the city of Windsor, in the province of Ontario, to the city of Detroit, state of Michigan.

Opening for traffic of second double track of the Canadian Pacific Railway between mile 78·9 and 86·0, Cartier Subdivision, in the province of Ontario.

Opening for traffic of the Mawer Southwesterly Branch of the Canadian National Railways from mile 35 to 49·30, in the province of Saskatchewan.

Opening for traffic of the Sturgis-Peesane Branch of the Canadian National Railways from a junction with the Tisdale Subdivision of the Canadian Northern Railway at Crooked River, Sask., southerly for a distance of 29·0 miles.

Opening for traffic of the St. Walburg-Bonnyville Branch of the Canadian National Railways from the connection of the said branch with the Bonnyville Subdivision at Bonnyville, Alta., mile 37·15, easterly for a distance of 20·4 miles.

Opening for traffic deviation of the Montreal and Southern Counties Railway in the parish of Longueuil, county of Chambly, in the province of Quebec.

Opening for traffic of the Peace River Subdivision of the Northern Alberta Railway from mile 97·4 to 113·4, Fairview to Hines Creek, in the province of Alberta.

Opening for traffic of line revision of the Canadian National Railways from mile 77·58 and 78·31, Endiang Subdivision, in the province of Alberta.

Opening for traffic of the Kootenay Landing-Proctor Branch of the Canadian Pacific Railway, mile 0·0 to 34·6, in the province of British Columbia.

Opening for the carriage of traffic of the Melfort-Aberdeen Branch of the Canadian National Railways from a point 19·5 miles easterly from its junction with the Cudworth Subdivision at mile 65·9 (Wakaw, Sask.), thence easterly a distance of 8·15 miles, in the province of Saskatchewan.

Opening for traffic of the Dundas Branch of the Toronto, Hamilton and Buffalo Railway from Emerson street, in the township of Ancaster, to a point in the town of Dundas, Ont., near the intersection of Bond and Colborne streets, a distance of three and one half miles.

Opening for traffic of the second main line of the Canadian National Railways, mile 57·05 to 61·97, Asquith Subdivision, in the province of Saskatchewan.

Opening for traffic Bromhead Westerly Branch of the Canadian Pacific Railway, mile 26·31 to 45·13 (Lake Alma to Minton) in the province of Saskatchewan.

#### SUBWAYS

Approval of roadway and pedestrian subway under tracks of Canadian Pacific Railway at Highlands station, in town of Lasalle, parish of Lachine, province of Quebec.

Approval of subway under the tracks of the Canadian Pacific Railway on Delorimier avenue, Montreal, province of Quebec.

Approval of subway under the Canadian National Railways on Simcoe street, Oshawa, Ont.

Approval of diversion of public highway and reconstruction of subway under the Great Northern Railway, mile 175 from Princeton, B.C.

Approval of reconstruction of subway on the road diversion in the north-west quarter of sec. 19, tp. 38, r. 1, W. 5 M., mile 20.39, Alberta Central Sub-division, Canadian Pacific Railway.

Approval of subway to be constructed under the Canadian National Railways at Concord, Ont.

Approval of subway at Park avenue, Montreal, province of Quebec, where it crosses the Canadian Pacific Railway between Atlantic and Beaumont avenues.

Approval of subway under tracks of the Canadian National Railways at 97th street, Edmonton, Alta.

Approval of subway under the Canadian National Railways in lots 114 and 123, township of Waterloo, county of Waterloo, province of Ontario.

Approval of subway under the tracks of the Pere Marquette Railway at Wyandotte street, Walkerville, Ont.

Approval of reconstruction of subway at King street, Toronto, Ont., by the Canadian Pacific Railway.

Approval of reconstruction of subway at Queen street, Toronto, Ont., by the Canadian Pacific Railway.

Approval of viaduct from Ste. Antoine street to Ottawa street, and between St. James street and Dalhousie street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on St. Maurice street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on Ottawa street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on Bridge street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on William street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on St. Paul street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on Wellington street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway at D'Argenson street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on St. James street, Montreal, P.Q., by the Canadian Pacific Railway.

Approval of a subway on Notre Dame street, Montreal, P.Q., by the Canadian National Railways.

Approval of a subway on St. Antoine street, Montreal, P.Q., by the Canadian National Railways.

Approval of subway on Canardiere Road, Quebec, P.Q., by the Canadian National Railways.

Approval of subway on Pembina Highway in the Winnipeg Terminal Sub-division, province of Manitoba, by the Canadian National Railways.

Approval of subway under the tracks of the Canadian National Railways at Simcoe street, Oshawa, Ont.

Approval of pedestrian subway under the Canadian Pacific Railway at Dundas street, Whitby, Ont.

Approval of subway at crossing of West street, con. 3, township of Brantford, on the line of the Canadian National Railways, province of Ontario.

Approval of subway under the tracks of the Canadian National Railways at 19th street east, Saskatoon, Sask.

Approval of subway under the tracks of the Canadian National Railways on Richmond street, London, Ont.

Approval of a subway under the tracks of the Canadian Pacific Railway on the road allowance north of the northeast quarter of sec. 16, tp. 10, r. 20, W. 1 M., at Kenmay, Man.

Approval of subway under the tracks of the Canadian National Railways on Wellington street, London, Ont.

Approval of subways at Cote St. Jean road, Donegain avenue, Coolbreeze avenue, Broadview avenue, and Cote St. Remi road, in the town and parish of Pointe Claire, county of Jacques Cartier, province of Quebec, on the line of the Canadian National Railways.

#### PROTECTION AT HIGHWAY CROSSINGS

Installation of bell and wig-wag at crossing of Ottawa avenue, municipality of South River, Ont., by the Canadian National Railways.

Establishment of new grade lines and improvement to view of crossing of highway at mile 117, Viking Subdivision, Canadian National Railways.

Installation of wig-wag signal in addition to existing bell at crossing of Vansittart street, east of station at Woodstock, Ont., by the Canadian Pacific Railway.

Installation of bell and wig-wag at crossing of Anderson road, north of Kinkora station, Prince Edward Island, by the Canadian National Railways.

Improvement to view at crossing of the Halifax-Yarmouth Trunk road by the Dominion Atlantic Railway at mile 14.6 from Annapolis, near Smith's Cove, N.S.

Installation of automatic electric bell and wig-wag at crossing of Prince William street, Campbellton, N.B., by the Canadian National Railways.

Improvement to view by establishing sight lines at Witter's Crossing, at Mildmay, Ont., by the Canadian National Railways.

Improvement to view at crossing of highway at mile 2, Murray Harbour Subdivision, Canadian National Railways, in the province of Prince Edward Island.

Installation of bell and wig-wag signals at highway crossing between lot 22, concession 1, and lot 22, Broken Front concession, township of Darlington, near Bowmanville, Ont.

Establishment of sight lines and removal of obstructions to view at crossing of the King's Highway No. 3, by the Pere Marquette Railway, lot 18, concession S.N.B.T.R., township of Southwold, county of Middlesex, province of Ontario.

Installation of manually operated bell and wig-wag at crossing of King street, Port Colborne, Ont., by the Canadian National Railways.

Installation of bell and wig-wag signals at crossing of Cremazie road by the Canadian Pacific Railway, mile 7, Lachute Subdivision, 1.1 miles west of Breslay station, in the City of Montreal, in the Province of Quebec.

Installation of bell and wig-wag at highway crossing at Aylesford, N.S., by the Dominion Atlantic Railway.

Installation of bell and wig-wag signal at crossing of Canboro road by the Toronto, Hamilton and Buffalo Railway between lot 18, concession 9, and lot 17, concession 10, township of Pelham, county of Welland, in the province of Ontario.

Installation of bell and wig-wag signals at crossing of highway between lots 15 and 16, concession 10, township of Pelham, county of Welland, in the province of Ontario, by the Toronto, Hamilton and Buffalo Railway.

Installation of bell and wig-wag signals at crossing of highway at Kendry, Ont., mile 30.4, Peterborough Subdivision, Canadian Pacific Railway.

Removal of obstructions to view at crossing of the Parry Sound-Rosseau Highway by the Canadian National Railways at mile 144.37 Bala Subdivision, township of Foley, in the province of Ontario.

Installation of bell and wig-wag signals at the crossing of the Luceville-St. Donat highway by the Canadian National Railway.

Installation of wig-wag signal in addition to existing bell at highway crossing at mile 52.0, Hamilton and Goderich Subdivision of the Canadian Pacific Railway.

Installation of double automatic bell and wig-wag signals at crossing of 11th Street West, Calgary, Alta., by the Canadian Pacific Railway.

Removal of obstructions to view at crossing of Dundas Street, Cooksville, Ont., by the Canadian National Electric Railways.

Removal of obstructions to view at crossing of highway 200 yards east of Fairholme Station, Sask., by the Canadian National Railways.

Installation of electric bell and wig-wag signals at crossing of Cathedral street, on the Lake Louise-Field road, Yoho park, in the province of British Columbia, by the Canadian Pacific Railway.

Installation of automatic bell and wig-wag signals at crossing of Garrison road, near Fort Erie, Ont., by the Canadian National Railways.

Installation of automatic bell and wig-wag signals at the crossing of Highway No. 10, south of Chatsworth, Ont., at mile 79.67, Owen Sound Subdivision, Canadian Pacific Railway.

Removal of obstructions to view at crossing of highway just north of the station at Venosta, P.Q., by the Canadian Pacific Railway.

Installation of bell and wig-wag signals at the crossing of the Walker road, in concession 7, township of Sandwich South, in the province of Ontario, by the Canadian Pacific Railway.

Installation of wig-wag signal in addition to existing bell at the first public crossing west of Rannoch, Ont., on the line of the Canadian National Railways.

Installation of bell and wig-wag signals at highway crossing, one mile east of Shedden, Ont., by the Pere Marquette Railway.

Installation of wig-wag in addition to existing bell at crossing of Provincial Highway No. 17 at Stittsville, Ont., by the Canadian Pacific Railway.

Installation of bell and wig-wag signals at crossing of Townsend street, North Simcoe, Ont., by the Canadian Pacific Railway.

Installation of wig-wag signal in addition to existing bell at crossing of Provincial Highway No. 15 at Stittsville, Ont., by the Canadian Pacific Railway.

Removal of obstructions to view at crossing of highway in section 11, township 19, range 21, W. 2 Mer., in the province of Saskatchewan, by the Canadian National Railways.

Removal of obstructions to view at Weiler's Crossing one-half mile north of Mildmay, Ont., by the Canadian National Railways.

Installation of wig-wag at north limit of Mount Forrest, Ont., King's Highway No. 6, by the Canadian National Railway.

Installation of bell and wig-wag at highway crossing at Meadowbrook, N.B., mile 112.63, Springhill Subdivision, Canadian National Railways.

Improvement to grade of approaches at crossing of the highway by the Canadian National Railways at Fremont Station, in the province of Quebec.

Installation of bell and wig-wag at crossing of the Cariboo Road, one and a half miles west of Dunnville, Ont., by the Canadian National Railways.

Removal of obstructions to view at crossing of Erie street, Stratford, Ont., by the Canadian National Railways.

Installation of double bell and wig-wag signals at crossing of highway west of Rideau Station, Ont., by the Canadian National Railways.

Installation of bell and wig-wag signals at crossing of the Webster side road, township of Saltfleet, in the province of Ontario.

## RAILWAY GRADE CROSSING FUND

Contribution of 40 per cent from Grade Crossing Fund towards cost of diversion of Senneterre-La Reine road in the township of Figuary, P.Q., on line of Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bells and wigwags at crossing of Ottawa avenue, municipality of South River, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of new grade lines and improvement to view at highway crossing between sections 14 and 15, township 53, range 23, west 4th meridian, at mile 117, Viking Subdivision, Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing wig-wag signal in addition to existing electric bell at crossing of Vansittart street, Woodstock, Ont., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting the Marieville-Cowansville highway along the north side of the Canadian Pacific Railway in parish of St. Brigide, county of Iberville, province of Quebec, by the Department of Roads of the province of Quebec.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag at crossing of Anderson road, north of Kinkora Station, Prince Edward Island, by Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of improvement to view at crossing of Halifax-Yarmouth trunk road by the Dominion Atlantic Railway, mileage 14.6 from Annapolis, near Smith's Cove, N.S.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting the Montreal-St. Alban's highway along the west side of the Canadian National Railways for a distance of about 6,000 feet in the parish of St. Armand West, province of Quebec.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing electric bell and wig-wag at Prince William street, Campbellton, N.B., by the Canadian National Railways.

Contribution of 25 per cent from Grade Crossing Fund towards cost of establishing sight lines at Witter's Crossing, at Mildmay, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstructions to the view at crossing of the County road at Port Robinson, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of improving view at highway crossing at mile 2, Murray Harbour Subdivision, Canadian National Railways, in the province of Prince Edward Island.

Contribution of 30 per cent from Grade Crossing Fund towards cost of diversion of the Lacombe-Coronation highway in sections 25 and 14, township 39, range 22, W. 4 M., province of Alberta.

Contribution of 30 per cent from Grade Crossing Fund towards cost of constructing diversion of the Walsh-Crowsnest highway from section 35, township 6, range 30, W. 4 M., in village of Pincher, along south side of Canadian Pacific Railway to connection with road on the north boundary of section 36, township 6, range 30, W. 4 M., a distance of 1,100 feet.

Contribution of 20 per cent from Grade Crossing Fund towards cost of constructing diversion of provincial highway in the township of Saltfleet, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing highway crossing between sections 3 and 4, township 46, range 10, W. 4 M., province of Alberta.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing subway under the Canadian National Railways on Simcoe street, Oshawa, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting Perron Boulevard, and carrying same across Canadian National Railways by means of an overhead crossing at mile 63.4, Matapedia Subdivision, province of Quebec.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing automatic bell and wig-wag signals in lieu of existing bell, at crossing between lot 22, con. 1, and lot 22, Broken Front concession, township of Darlington, near Bowmanville, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removal of obstructions to view and establishing of sight lines at crossing of Pere Marquette Railway, by King's Highway No. 3, lot 18, con. 5, N.B.T.R., township of Southwold, county of Middlesex, province of Ontario.

Contribution of 10 per cent from Grade Crossing Fund towards cost of diverting the Yale road between stations 97 ÷ 97 and 223 ÷ 12, and construction of an overhead crossing of the Great Northern Railway about four miles west of Abbotsford, B.C.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting Kempt street north to a connection with George street, and south to a connection with Dalhousie street, New Glasgow, N.S., and closing of Kempt street inside right of way of Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting East River road where it crosses lots 13, 14 and 15 in concession 6, township of South Dumfries, province of Ontario, on the line of the Lake Erie and Northern Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing manually operated bell and wig-wag at crossing of King street, Port Colborne, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting the highway to the west side of the Canadian Pacific Railway and the Canadian National Railways connecting road allowance between concessions 5 and 6, township of South Orillia, with the side road between lots 5 and 6, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag signals at crossing of the Cremazie road by the Canadian Pacific Railway, mile 7, Lachute Subdivision, 1.1 miles west of Breslay station, in city of Montreal, P.Q.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing automatic electric bell and wig-wag signals at highway crossing at Aylesford, N.S., by the Dominion Atlantic Railway.

Contribution of 30 per cent from Grade Crossing Fund towards cost of constructing diversion of the Edmonton-Lloydminster main highway along the southwest side of the Canadian National Railways from sec. 12, tp. 52, r. 14, W. 4 M., mile 87.58, to sec. 33, tp. 51, r. 13, W. 4 M., mile 92.40, province of Alberta.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing overhead crossing of double track of the Canadian National Railways, and diversion of the Kingston road in lots 14 and 15, concession D, township of Scarborough, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing overhead bridge over the Canadian National Railways on Eglington avenue, Toronto, Ontario (not exceeding the sum of \$100,000).

Contribution of 40 per cent from Grade Crossing Fund towards cost of diversion of the Montreal-St. Alban's highway along west side of the Canadian National Railways, in the parishes of St. Armand Ouest and St. Pierre, province of Quebec.

Contribution of 35 per cent from Grade Crossing Fund towards cost of diversion of highway at Savona, B.C., and overhead crossing of the Canadian Pacific Railway at mile 23·83, west of Kamloops, B.C.

Contribution of 35 per cent from Grade Crossing Fund towards cost of diverting highway in sec. 30, tp. 11, r. 24, W.P.M., between Lenore and Pope, province of Manitoba, and elimination of two highway crossings of Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing overhead crossing of the Canadian Pacific Railway at mile 41·63, Chalk River Subdivision, just north of town of Arnprior, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing diversion of public road from a point near Beaver Cove Station, Cape Breton, to a connection with existing road.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing diversion of highway at Tupperville, N.S., closing of crossing of Dominion Atlantic Railway, and construction of farm crossing.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing three aspect Bryant wig-wag signal and bell at crossing of Toronto, Hamilton and Buffalo Railway by the Canboro road between lot 18, concession 9, and lot 17, concession 10, township of Pelham, county of Welland, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing electric bell and wig-wag signal at crossing of highway by main line of Canadian Pacific Railway at Kendry, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting highway over Willingdon-Stratheona Subdivision of the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting highway and constructing subway under the Canadian National Railways in lots 114 and 123, township of Waterloo, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing electric bell and wig-wag at crossing of the Luceville-St. Donat highway by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing wig-wag signal in addition to existing bell at highway crossing 3 miles west of Wallenstein Station, Ont., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting Kempt street north to a connection with George street, and south to a connection with Dalhousie street, in town of New Glasgow, province of Nova Scotia, and closing portion of Kempt street within the limits of the right of way of the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting highway at Coldbrook, King's county, province of Nova Scotia, so as to eliminate two crossings of the Dominion Atlantic Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing automatic bell and wig-wag signals at the crossing of 11th street west, Calgary, Alta., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstructions to view at crossing of highway 200 yards east of Fairholme station, province of Saskatchewan, by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing automatic electric bell and wig-wag signals at Cathedral street crossing, on the Lake Louise-Field road, in Yoho park, province of British Columbia, by the Canadian Pacific Railway.

Contribution from Grade Crossing Fund of 40 per cent of  $2\frac{2}{8}$  of the cost of diverting public highway at Aulac, N.B., so as to eliminate two grade crossings of the Canadian National Railways.

Contribution of 20 per cent from Grade Crossing Fund towards cost of diverting the Calgary-Medicine Hat highway so as to eliminate two level crossings of the Canadian Pacific Railway east of station at Counters, Alta.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag at crossing of Garrison road, near Fort Erie, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing automatic electric bell and wig-wag signals at crossing of Highway No. 10, south of Chatsworth, Ont., mile 79.67, Owen Sound Subdivision, Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstructions to view at highway crossing just north of station at Venosta, P.Q., on the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of changes in installation of automatic bell at crossing at St. Antoine st., Rigaud, P.Q., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting highway and constructing overhead crossing of Canadian National Railways in S.E.  $\frac{1}{4}$  sec. 20, township 53, range 7, W. 5 M., at Entwistle, Alta.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing standard highway crossing at mile 1.23, St. Tite Subdivision of the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of widening planking at crossing at Riviere-a-Pierre highway at mile 6.2, St. Tite Subdivision, Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of widening the planking at crossing of Riviere-a-Pierre highway at mile 4.4, St. Tite Subdivision, Canadian National Railways, near Notre Dame des Agnes, P.Q.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstructions to view at crossing of Riviere-a-Pierre highway at mileage 3.2, St. Tite Subdivision, Canadian National Railways, in parish of Canton Bois, county of Portneuf, province of Quebec.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstructions to view at crossing of highway by Canadian Pacific Railway, 1.3 miles north of Markdale station, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting Transmission avenue along Canadian Pacific Railway right of way to intersection of Cedar, Hemlock and St. Marc streets, Montreal, P.Q.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing wig-wag signal in addition to existing bell at highway crossing of Canadian National Railways in lot 4, concession 6, township of Orillia South, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing automatic bell and wig-wag at crossing of the Canadian Pacific Railway in concession 7, township of Sandwich South, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing diversion of highway to a new crossing of the Kettle Valley Railway at mileage 69, east of Princeton, B.C.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing double bell and wig-wag signals at highway crossing west of Chatham, Ont., on No. 2 highway, concessions 4 and 5, township of Raleigh, province of Ontario, by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag signal at highway crossing two miles east of city of Chatham, Ont., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing wig-wag signal at crossing of Wellington street, Hamilton, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing wig-wag signal in addition to existing bell at first public crossing west of Rannoch, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing wig-wag signal in addition to existing electric bell at highway crossing in lot 4, concession 6, township of Orillia South, Province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag signals at crossing of highway one mile east of Shedden, Ont., by the Pere Marquette Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting the highway and eliminating the crossing over the Canadian National Railways, Hagersville Subdivision, lot 2, concession 6, township of Barton, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installation of wig-wag in addition to existing bell at crossing of Provincial Highway No. 17 at Stittsville, Ont., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag signal at crossing of Townsend street, North Simcoe, Ont., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing wig-wag signal at crossing of Provincial Highway No. 15, in village of Stittsville, Ont., by the Canadian Pacific Railway.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstructions to view in section 11, township 19, range 21, W. 2 M., province of Saskatchewan, by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund (not exceeding \$100,000) towards cost of constructing subway on Simcoe street, Oshawa, Ont., under the tracks of the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting highway and constructing crossing over the Kettle Valley Railway (Canadian Pacific Railway) at mile 64.6, Princeton Subdivision, province of British Columbia.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diversion of public road at Timberlea, N.S., in the Chester Subdivision of the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstructions to view at crossing of highway at mile 63.86, Glendyne Subdivision of the Canadian National Railways, in province of Quebec.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing subway under the Canadian National Railways at Drouillard Road, East Windsor, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstruction to view at Weilers Crossing, one-half mile north of Mildmay, Ont., by the Canadian National Railways.

Contribution of 30 per cent from Grade Crossing Fund towards cost of constructing diversion of highway through lots 23, 24, 25 and 26, concessions 5 and 6, township of Gainsboro, province of Ontario.

Contribution of 40 per cent from Grade Crossing Fund toward cost of installing wig-wag signal at crossing of Canadian National Railways at north limits of Mount Forest, Ont., King's Highway No. 6.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing overhead bridge across the tracks of the Temiskaming and Northern Ontario Railway at Lang street, Cobalt, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing subway under the tracks of the Canadian National Railways on the 7th line road, Oakville, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting the Montreal-Hull-Aylmer-Pembroke highway in municipalities of Onslow and Bristol, the two existing crossings over Canadian Pacific Railway to be closed.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting public road at Hunt's point, Queen's county, province of Nova Scotia, and closing existing public crossings at mileages 8·19 and 8·67, Yarmouth Subdivision of Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting the highway at the second public crossing east of Alice, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing road diversion between mile 68·60 and 69·35, New Glasgow Subdivision of Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diverting public road between Elmsdale and Lantz in province of Nova Scotia.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag at Meadowbrook, N.B., mile 112·68, Springhill Subdivision, Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund (not to exceed \$100,000) towards cost of constructing subway under tracks of the Canadian National Railways at 19th street east, Saskatoon, Sask.

Contribution of 40 per cent from Grade Crossing Fund towards cost of improvement to view at the crossing of the highway at Fremart Station, P.Q., by the Canadian National Railways.

Contribution of 20 per cent from Grade Crossing Fund towards cost of constructing road diversion of sec. 32, tp. 16, r. 22, W. 1st M., on the line of the Canadian Pacific Railway, province of Manitoba.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag at crossing of the Canboro road, one and a half miles west of Dunnville, Ont., by the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing subway under the Canadian Pacific Railway at Kenmay, Man.

Contribution of 40 per cent from Grade Crossing Fund towards cost of construction of a subway (not exceeding \$100,000) under the Canadian Pacific Railway and the Essex Terminal Railway on Ellis avenue, Windsor, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing a subway (not exceeding sum of \$100,000) under the tracks of the Canadian National Railways on Richmond St., London, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of diversion of highway at Mervin, Sask., on the line of the Canadian National Railways.

Contribution of 40 per cent from Grade Crossing Fund towards cost of removing obstruction to view at crossing of the Canadian National Railways at Erie street, Stratford, Ont.

Contribution of 40 per cent from Grade Crossing Fund towards cost of constructing foot-bridge over the tracks of the Canadian Pacific Railway at Swift Current, Sask.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing double bells and wig-wags at highway crossing west of Rideau station, province of Ontario, by the Canadian National Railways.

Contribution of 25 per cent from Grade Crossing Fund towards cost of constructing diversion of highway from Elm Creek to Haywood, Man.

Contribution of 40 per cent from Grade Crossing Fund towards cost of installing bell and wig-wag signal at crossing of Webster side road, lots 26 and 27, township of Saltfleet, province of Ontario, by the Canadian National Railways.

## EXPROPRIATION

Expropriation by the Northern Alberta Railway of additional land in s.e.  $\frac{1}{4}$  sec. 15, tp. 78, r. 2. W. 6 M., for purpose of maintaining a ditch for the purpose of supplying water to the company's reservoir at Belloy station.

Expropriation of additional lands in district lot 536, Osoyoos Division of Yale district, province of British Columbia, by the Vancouver, Victoria and Eastern Railway.

Expropriation of lands in n.e.  $\frac{1}{4}$  sec. 2, tp. 40, r. 13, W. 4 M., by the Canadian Pacific Railway to provide for a wye.

Expropriation of land situate in Belvedere Ward, city of Quebec, by the Canadian Pacific Railway for railway facilities.

---

In addition to the above many other matters have been dealt with by the Board's engineers, such as exemption from fencing, gates and cattle-guards, reduced clearances of structures at railway sidings, removal of speed limitations, removal of industrial spurs, speed restriction of trains through junctions, protection of switches on spurs leading to industries, farm crossing complaints, investigation of railways out of repair, investigation of accidents, farm crossing complaints, drainage complaints, inductive interference, and protection at crossings of telephone and telegraph wires by power transmission lines.

## APPENDIX "C"

REPORT OF THE CHIEF OPERATING OFFICER OF THE BOARD FOR  
THE YEAR ENDING DECEMBER 31, 1930

February 13, 1931.

A. D. CARTWRIGHT, Esq.,  
Secretary, Board of Railway Commissioners,  
Building.

DEAR SIR,—In compliance with section 31 of the Railway Act of 1919, the annual report of the Chief Operating Officer covering the work of the Operating Department of the Board during the fiscal year ending December 31, 1930, is respectfully submitted in quadruplicate.

REPORTING AND INVESTIGATING ACCIDENTS ATTENDED BY PERSONAL INJURY OR LOSS  
OF LIFE

Two thousand four hundred and twenty-seven accidents were reported during the year to the Board by the various railway companies subject to its jurisdiction, involving 2,937 casualties, of which number 425 persons were killed and 2,512 persons injured. See statements Nos. 1, 3, and 4, for particulars.

The comparative statements Nos. 2, 5, and 6, herewith, of killed and injured show a decrease of 1 person killed and a decrease of 442 injured.

Of the total 2,427 accidents so reported, 1,239 were investigated, covering 257 persons killed and 1,509 persons injured. Detailed statements Nos. 7, 8, 9 and 10 cover the investigations with respect to collisions, derailments, accidents at highway crossings and accidents to employees while working on or under engines. These four statements show a total of 485 investigations, covering 135 persons killed and 735 persons injured. The remainder, 754 investigations, covers 122 persons killed and 774 injured, and are spread over accidents covered by the various headings referred to in statements Nos. 3, 4, and 5.

It will be observed that out of a total of 2,426 accidents involving 2,937 casualties during the fiscal year there were 168 trespassers killed and 205 injured. In this connection reference is made to statement No. 16, showing by railways and provinces the number of killed and injured.

The matter of highway crossing accidents, protection provided, etc., is dealt with by detailed statements Nos. 3, 4, 5, 9, 11, 12, 13, 14 and 15.

## INSPECTION OF SAFETY APPLIANCES AND CAR EQUIPMENT

The work coming within this category is largely carried on under the provisions of section 298 of the Railway Act and the Board's General Orders Nos. 102, 128, 261, 270, 356, 458 and 461. Reference to the work performed by the department in this connection will be found in detailed statements Nos. 19, 20, 21-A and 21-B. The inspection of 64,708 cars, it will be readily understood, entails considerable time and labour, both on the ground and in the office at headquarters, where the work of recording, checking and filing of the

numerous reports is carried on and subsequent correspondence with the railway companies with a view to having the defects so reported remedied as promptly as possible.

The inspection of 64,708 cars above referred to revealed 3,400 defective cars (5.25 per cent) with defects totalling 3,847.

#### INSPECTION OF MOTIVE POWER

This division of the work is carried on under sections 298, 299, 200 and 201 of the Railway Act, and the Board's General Orders Nos. 12, 31, 66, 102, 131, 199, 226, 289, 293, 362, 385, 402, 403, 404, 412, 415, 424, 434, 436, 463, 473, 480 and 486. A total of 11,133 locomotives were inspected during the fiscal year, the total number of defective engines being 527, (5 per cent), with defects numbering 639. For details see statement No. 22.

Under General Order No. 473, the so-called "Locomotive Boiler Inspection Order," 68,057 report forms of monthly and annual inspections, tests, etc., were filed with the Department during the year. These reports cover 5,651 locomotives.

#### STATIONARY BOILERS

Pursuant to General Order No. 330, the so-called "Stationary Boiler Inspection Order," 4,241 report forms of semi-annual and annual inspections were filed during the year covering 2,084 stationary boilers. The checking and recording of the above mentioned locomotive and stationary boiler reports, together with the necessary correspondence in connection therewith, naturally creates an extensive line of work.

#### INSPECTION OF PASSENGER EQUIPMENT; STATION BUILDINGS AND PREMISES

This work comprises features of safety, cleanliness, accommodation, etc. A large number of matters have been brought to the attention of the proper officials with beneficial results.

APPLICATIONS AND COMPLAINTS RE TRAIN AND STATION SERVICE, HIGHWAY CROSSING

#### PROTECTION, STATION LOCATIONS, CAR SUPPLY, ETC.

The work under this heading covers a wide range of subjects and entails, in many instances, a considerable amount of inquiry and research. During the year complaints and applications numbering 1,290 were inquired into and reported upon.

In conclusion it might be stated that in order to accomplish the work briefly outlined in the foregoing it has necessitated the travelling of 359,156 miles by the staff of this department.

Respectfully submitted,

G. SPENCER,

*Chief Operating officer.*

## APPENDIX "D"

## REPORT OF THE CHIEF FIRE INSPECTOR OF THE BOARD, CLYDE LEAVITT, FOR THE YEAR ENDING DECEMBER 31, 1930

February 15, 1931.

A. D. CARTWRIGHT, Esq.,  
 Secretary, Board of Railway Commissioners,  
 Building.

SIR,—In accordance with section 31 of the Railway Act, 1919, the annual report covering the work of the Fire Inspection Department of the Board, for the year ended on the thirty-first day of December, 1930, is respectfully submitted.

Climatic conditions, which largely govern the forest fire-hazard, were in 1930 in some respects similar to those experienced in 1929. The worst fire hazard in many years, due to drought, low humidity, high temperature and wind, was experienced during the fire season of 1930 in Nova Scotia, resulting in heavy losses. Periods of high fire-hazard were also experienced in western Ontario and northern Saskatchewan and are responsible for an increase in the number of fires, areas burned and damage done.

Climatic conditions in New Brunswick, Quebec, eastern Ontario, Manitoba, Alberta and British Columbia, from the standpoint of duration of dangerous fire weather, were normal and tended considerably to reduce the railway fire record in these provinces.

## ORGANIZATION

In co-operation with the forest protective organizations of the Dominion and Provincial Governments, 188 officials of such organizations acted as ex-officio officers of the Board's Fire Inspection Department, distributed as follows:—

Nova Scotia Forest Service.....	9
New Brunswick Forest Service.....	4
Quebec Forest Protection Service.....	26
Ontario Forestry Branch.....	61
Saskatchewan: Office of Superintendent of Insurance.....	2
Alberta: Game Protection Branch.....	2
Dominion Forest Service.....	20
Canadian National Parks Branch.....	6
British Columbia Forest Branch.....	58

## RAILWAY FIRE PATROLS

The total miles of railway in Canada subject to the Board's jurisdiction was increased by 942 miles during the past year, making a grand total of 41,356 miles, of which 14,209 miles or 34·36 per cent, is classified as running through forested territory. Of this, special patrol by selected members of section crews is prescribed on 6,022 miles; special patrol by special men on velocipedes on 153 miles, and on power speeders on 1,230 miles; foot patrolmen on 59 miles and special patrol by motor boat, saddle horses and velocipedes on 146 miles of line under construction, making a total of 7,610 miles of line on which some form of special patrol by railway forces was required. This special patrol service required the special attention to fire patrol of 921 selected members of section crews, averaging one man to each 6·54 miles of track; 14 velocipede and 53 power speeder patrolmen, 14 foot, 2 motor boat and 5 construction patrolmen—a total of 1,009 special fire patrolmen on all lines. On 6,599 miles of forested

territory where the fire hazard is not extreme, special fire patrol is not prescribed, the detection, reporting and extinguishing of fires being left to section forces and other regular employees as a part of their regular duties in accordance with working instructions issued by the railway managements.

#### FIRE STATISTICS

Railways subject to the Board's jurisdiction throughout Canada are reported as having caused 668 fires in territories classified as forested. These fires burned over a total of 48,742 acres, with forest and other property loss valued at \$103,630. Of this area, 20,894 acres was young forest growth, 5,408 acres merchantable timber, and 4,420 acres slashing or old burn not restocking, while 18,020 acres was non-forest land. The area of forest land burned over was thus 30,722 acres, or 63.03 per cent of the total. The valuation of young forest and standing timber destroyed is \$76,846 or 74.16 per cent of the total damage; forest products consisting of poles, ties and cordwood to the value of \$13,038 or 12.58 per cent, and improved property in some form, valued at \$13,746, or 13.26 per cent of the total, were also destroyed. Of the 668 fires attributed to the railways, 34.88 per cent were incipient, 48.65 per cent covered between one-fourth acre and ten acres each, while 16.47 per cent attained a size over ten acres each.

Detail statistics by railways are shown in the accompanying tabulation; another table follows, showing the distribution of fires attributed to railways, as between locomotives, employees and construction. The former includes fires attributed to stacks or ash pans of locomotives or other portable boilers. The employee fires are mostly cases where fires escaped from section forces burning right of way or old ties. Fires on lines under construction are chiefly cases of fires escaping from construction employees clearing rights of way, and are responsible for 36.85 per cent of the area burned by fires attributed to railways. Fires attributed to locomotives comprise 68.56 per cent of the total number of railway fires, and these burned 55.04 per cent of the total area, causing 79.19 per cent of the estimated total loss in money value of forest and other property destroyed by railway fires. Employee fires account for 28.89 per cent of the number, 8.11 per cent of the area, and 1.36 per cent of the money value of damage done.

Fires on lines under construction in Saskatchewan account for 2.55 per cent of the number, 36.85 per cent of the area, and 19.45 per cent of the money value of damage caused by fires attributed to railways. Railway fires occurring east of Fort William, Port Arthur and Armstrong represent 47.30 per cent of the number, 47.06 per cent of the area and 54.75 per cent of the damage attributed to the railways. Railway fires occurring in Nova Scotia represent 20.51 per cent of the number, 31.11 per cent of the area and 51.30 per cent of the damage attributed to railways throughout the Dominion.

In addition to the foregoing, there were reported 242 fires burning in ties in the track, not spreading or causing damage other than to track ties.

One hundred and thirty-eight fires, originating within 300 feet of track in forested territory, are attributed to known causes other than the railway. Of these, 73 are charged to campers and travellers, 29 to settlers, and 36 to other known causes; 52 were incipient, 69 burned from one-fourth acre to ten acres each, and 17 burned more than ten acres each. These fires burned over 17,595 acres of young forest growth, 7,862 acres of merchantable timber, 202 acres of slash or old burn not restocking and 1,729 acres of non-forest land, with total damage to forest and other property estimated at \$42,046. Fires in this category in Ontario represent 35.50 per cent of the number, 96.54 per cent of the area and 91.74 per cent of the damage.

Fires of unknown origin originating within 300 feet of track total 51, burning over 7,468 acres, with forest and other property loss valued at \$268,351. Of this the forest valuation accounts for \$261.

Thus, all fires reported as having originated within 300 feet of track in forested territory, due to all causes, total 857, burning an area of 83,598 acres of forest and non-forest land, with total estimated damage of \$414,027.

## FIRE-GUARD REQUIREMENTS

In accordance with the fire-guard requirements, 5,878·57 miles of fire guards were constructed or maintained in uncultivated lands (fenced grazing and wild lands) in non-forested sections of the Prairie Provinces.

(a) Includes Fredericton and Grand Lake Coal and Railway; New Brunswick Coal and Railway; Dominion Atlantic and Quebec Central Railways.

(b) Includes Esquimalt and Nanaimo and Kettle Valley Railways.

(c) Excludes Hudson Bay Railway.

(d) Includes following lines: Algoma Eastern; Cumberland Railway and Coal Co.; Nipissing Central; Sydney and Louisburg and White Pass and Yukon.

NOTE.—No fires were reported during 1930 within 300 feet of track in forest sections along the following lines: Maine Central (N.B.); Maritime Coal, Railway and Power Co.; Quebec Central and Temiscouata.

Class A fires are those which cover an area less than one-fourth acre, and do no damage;

Class B fires are those which cover an area of one-fourth acre to ten acres.

Class C fires are those which cover an area over ten acres.

## SUMMARY of fires of railway origin in forest sections, classified by causes, season of 1930.

Fire	Number of Fires				Forest Land Burned				Non-forest land burned		Damage to Forest Products	Damage to Other Property	Grand Totals

LIST of cases appealed to the Supreme Court of Canada, from February 1, 1904,  
to December 31, 1930.

File No.	Subject	Decision
643	Montreal Terminal Ry. <i>vs.</i> Montreal Street Ry., Pius IX Ave., upon question of jurisdiction.	Allowed.
1455	James Bay Ry. <i>vs.</i> G.T.R. undercrossing at a point near Beaverton, Ont., Lot 13, Con. 7, Twp. of Thorah.	Dismissed.
1492	James Bay Ry. <i>vs.</i> G.T.R. crossing Belt Line Spur. Question of Law.	Dismissed.
383	Ottawa Electric Ry. and City of Ottawa <i>vs.</i> Canada Atlantic Ry., <i>re</i> Bank St. Subway, Ottawa. Question of Law.	Dismissed.
1621	Toronto Ry. Co., against Order 7813, July 3rd, 1909, <i>re</i> high level bridge over Don Improvement and tracks of G.T.R. and C.P.R., Toronto. Question of Jurisdiction.	Dismissed.
589	<i>Re</i> Toronto Union Station, A. R. Williams, expropriation. Question of Jurisdiction.	Dismissed.
C. 1680	Essex Terminal Ry. and W.E. & L.S.R. Ry. crossing in Twp. of Sandwich, Ont. Question of Law.	Dismissed.
C. 1309	Robinson <i>vs.</i> G.T.R. Two-cent rate. Question of Law.	Dismissed.
689	C.P.R. <i>vs.</i> G.T.R. <i>re</i> branch line at London, Ont. Question of Jurisdiction.	Dismissed.
1497	T. D. Robinson <i>vs.</i> C.N.R. Spur at Winnipeg. Question of Jurisdiction.	Dismissed.
9527	Montreal Street Ry., <i>re</i> rates, Mount Royal Ward. Question of Jurisdiction.	Allowed.
C. 1419	Ontario Department of Agriculture <i>vs.</i> G.T.R. <i>re</i> station at Vineland, Ont. Jurisdiction.	Dismissed.
C. 3322	<i>Re</i> Toronto Viaduct Appeal of C.P.R. Co. on Question of Law.	Dismissed.
C. 4897	<i>Re</i> fencing and cattleguards, Order 7473, Appeal of C.N.R. Co. upon question of Jurisdiction.	Allowed.
C. 4492	City of Toronto <i>vs.</i> G.T.R. and C.P.R. Cos. <i>re</i> commutation rates. Question of Law.	Withdrawn.
C. 3378	City of Ottawa and County of Carleton <i>re</i> Richmond Road Viaduct. Question of Jurisdiction.	Dismissed.
C. 2545	G.T.R. and C.N.O.R., <i>re</i> spur in Twp. of Carboro, Ont. Question of Jurisdiction.	Dismissed.
13079	G.T.R. <i>vs.</i> British American Oil Cos., <i>re</i> oil rates. Question of Law.	Dismissed.
C. 3269	G.T.P.R. <i>vs.</i> City of Fort William, Ont., <i>re</i> location. Question of Jurisdiction.	Dismissed.
1319	N. St. C. & T. Ry. Co. <i>vs.</i> Davy. Question of Jurisdiction.	Allowed.
11965	Clover Bar Coal Co. and Wm. Humberstone <i>vs.</i> G.T.P. and the Clover Bar Sand & Gravel Co. Question of Jurisdiction.	Dismissed.
15580	Regina Rates Case. Question of Law.	Dismissed.
12682	G.T.P.R. <i>vs.</i> A. E. Purcell of Saskatoon, Sask. Question of Jurisdiction.	Dismissed.
17963	C.P.R. <i>vs.</i> British American Oil Companies. Question of Jurisdiction.	Dismissed.
C. 3269	G.T.R. & C.P.R. <i>vs.</i> Canadian Oil Companies. Question of Jurisdiction.	Dismissed.
15530-1	B.C. Elec. Ry., V.V. & E. Ry. <i>vs.</i> City of Vancouver, B.C. Question of Jurisdiction.	Dismissed.
20062	E. B. Chambers and W. E. C. Phair <i>vs.</i> C.P.R. Co. Question of Jurisdiction.	Allowed.
27095	C.N.R. <i>vs.</i> Wm. A. Taylor. Jurisdiction.	Dismissed.
1487	G.T.R. <i>vs.</i> City of Edmonton. Question of Law.	Dismissed.
18578	Montreal Tramways and M.P. & I. Ry. <i>vs.</i> Lachine, Jacques Cartier & Maisonneuve Ry. Jurisdiction.	Allowed.
19435	City of Hamilton <i>vs.</i> T.H. & B. Ry. Jurisdiction.	Allowed.
14329-9	G.T.R. <i>vs.</i> Hepworth Silicoen Pressed Brick Co. Question of Law.	Dismissed.
23009	Toronto Ry. Co. and City of Toronto <i>vs.</i> C.P.R. Co. Question of Law and Jurisdiction.	Dismissed.
21428	City of Edmonton <i>vs.</i> E.D. & B.C. Ry. Co. Question of Law.	Dismissed.
12021-70	Ingersoll Tel. Co. and others <i>vs.</i> Bell Tel. Co. Question of Law.	Dismissed.
9437-153	G.T.R. <i>vs.</i> Bourassa of Laprairie, Que. Question of Law and Jurisdiction.	Withdrawn.
C. 3935	G.N.W. Tel. Co. submit for opinion of Court, a question of law involved in matter of General Order No. 162.	Abandoned.
16171	Gov't. of Manitoba and J. S. Ashdown Hardware Co. <i>re</i> 15% increase in freight rates. Jurisdiction.	Abandoned.
27524	C.P.R. Co. <i>vs.</i> Dep't. of Public Works for Ontario, <i>re</i> crossing in Twp. of Kirkpatrick. Question of Law.	Withdrawn.
13622	E. & N. Ry. Co. <i>re</i> right of City of Victoria, B.C. to have access over bridge at Victoria Harbour. Jurisdiction.	Abandoned.
27840	Munic. of Burnaby, B.C. <i>vs.</i> B.C. Elec. Ry. Co. <i>re</i> commutation rates. Jurisdiction.	Abandoned.
26981	City of Toronto <i>vs.</i> Toronto Terminal Ry. Co. <i>re</i> pressure pipes under Bay, Scott and Yonge Sts., Toronto, Ont. Question of Law.	Dismissed.
11118	Applic. of Mr. Wegenast for a stated case in <i>re</i> Brampton commutation rates. Question of Law.	Dismissed.
28439	Ottawa Elec. Ry. against Order of the Board disallowing proposed increase in passenger rates. Question of Jurisdiction.	Allowed.
28950	Board submits stated case for the opinion of the Court of question of jurisdiction in matter of British Columbia Elec. Ry. Co's application for increased rates.	Abandoned.

LIST of cases appealed to the Supreme Court of Canada, from February 1, 1904, to December 31, 1930.—*Concluded*

File No.	Subject	Decision
28140	Appeal of C.P.R. Co. upon question of law arising out of the application of Dep't. of Lands, Forests and Mines, Prov. of Ontario, for an Order directing C.P.R. Co. to provide and construct an overhead crossing at its expense between Lots 6 and 7, Con. 1, Twp. of Eaton, Ont., April 1st, 1922. (Appeal allowed with cost.) (Question answered in the negative.)	Allowed.
30381	V.V. & E. Ry. & Nav. Co. <i>vs.</i> Vancouver Harbour Commissioners and the C.N. Rys. from Order of the Board No. 31647, dated Oct. 15th, 1921. Question of Jurisdiction.....	Dismissed.

## APPENDIX "F"

LIST OF GENERAL ORDERS AND CIRCULARS OF THE BOARD FOR  
THE YEAR ENDING DECEMBER 31, 1930

## GENERAL ORDER No. 483

*In the matter of the protection of crossings at grade level.*

File No. 27270.3.

WEDNESDAY, the 5th day of March, A.D. 1930.

S. J. McLEAN, *Asst. Chief Commissioner.*

THOMAS VIEN, K.C., *Deputy Chief Commissioner.*

Hon. T. C. NORRIS, *Commissioner.*

J. A. STONEMAN, *Commissioner.*

Whereas, it appears that, after a train has passed a crossing protected by automatic signals or automatic gates, stops before it reaches the end of the circuit, and makes a back up movement over the crossing, it is impracticable to protect the movement by such automatic signals or automatic gates; and upon the report and recommendation of its Chief Engineer,—

*The Board Orders:* That the following regulations be adopted by railway companies subject to its jurisdiction in the operation of grade crossings protected by automatic signals or automatic gates, namely:—

“When a train or engine passes over any crossing protected by automatic signals or automatic gates and does not go beyond the end of the circuit (in most cases located approximately 2,000 feet from the crossing), before making a reverse movement over the same crossing, it will be necessary for trainmen to flag the crossing.”

S. J. McLEAN,

*Assistant Chief Commissioner.*

## GENERAL ORDER No. 484

*In the matter of flagging equipment to be used to regulate movement of vehicular traffic over railways at highway crossings at which trainmen are required to protect during the time trains are uncoupled at such crossings.*

File No. 14502.3.

MONDAY, the 7th day of April, A.D. 1930

S. J. McLEAN, *Asst. Chief Commissioner.*

THOMAS VIEN, K.C., *Deputy Chief Commissioner.*

Hon. T. C. NORRIS, *Commissioner.*

Upon reading and considering the submissions filed, and for the purpose of making the practice uniform,—

*The Board Orders:* That all railway companies subject to its jurisdiction adopt and use a hand signal by day and a signal by clear (white light) lantern at night to protect the movements of vehicles over railways at highway crossings at which trainmen are required to protect during the time trains are uncoupled at such crossings.

S. J. McLEAN,

*Assistant Chief Commissioner.*

## GENERAL ORDER No. 485

*In the matter of the General Order of the Board No. 483, dated March 5, 1930, prescribing a regulation to be adopted by railway companies subject to the jurisdiction of the Board in the operation of grade crossings protected by automatic signals or automatic gates, after a train has passed a crossing and makes a back-up movement over the crossing.*

File No. 25434.5.

FRIDAY, the 30th day of May, A.D. 1930.

Hon. H. A. McKEOWN, K.C., *Chief Commissioner.*

S. J. McLEAN, *Asst. Chief Commissioner.*

THOMAS VIEN, K.C., *Deputy Chief Commissioner.*

C. LAWRENCE, *Commissioner.*

Hon. T. C. NORRIS, *Commissioner.*

J. A. STONEMAN, *Commissioner.*

Whereas the railway companies, by the Board's Circular No. 228, dated April 3, 1930, were asked to show cause why, in order to remove any doubt or ambiguity as to where the end of the circuit comes, arrangements should not be made to establish a definite mark, for example, a small finger-board with the words, "end of block" or "end of circuit;"

And upon reading the submissions filed on behalf of the Railway Association of Canada, the Essex Terminal Railway Company, the Algoma Central and Hudson Bay Railway Company, Rutland Railroad Company, Canadian National Electric Railways, the Grand River Railway Company, New York Central Railroad Company, and the Great Northern Railway Company; and upon the report and recommendation of the Chief Operating Officer of the Board,—

*It is Ordered:* That the said General Order No. 483, dated March 5, 1930, be, and it is hereby, amended by adding at the end thereof the words "the end of the circuit at such crossings to be marked by a small finger-board with the words 'end of block' or 'end of circuit.'"

H. A. McKEOWN,

*Chief Commissioner.*

## GENERAL ORDER No. 486

*In the matter of the General Order of the Board No. 102, dated February 17, 1913, prescribing the "Regulations With Respect to Railway Safety Appliance Standards" for use on railways subject to the jurisdiction of the Board.*

File No. 22223.5.

MONDAY, the 7th day of July, A.D. 1930.

THOMAS VIEN, K.C., *Deputy Chief Commissioner.*

C. LAWRENCE, *Commissioner.*

Upon reading the submissions filed on behalf of the Canadian National Railways, and the report and recommendation of the Chief Operating Officer of the Board,—

*It is Ordered:* That the "Regulations With Respect to Railway Safety Appliance Standards," approved under the said General Order No. 102, dated February 17, 1913, be, and they are hereby, amended by adding thereto, under the heading, "Tenders of Vanderbilt Type," the following provision, namely:—

"On tenders of the Vanderbilt type, with three filling-holes, there shall be a handrail four inches above the level of the top running-board not less than one inch in diameter, extending from the present hand-rail, which extends from the coal space to within twenty inches of the first filling-hole, to the rear end of the tender at each side of the top running-board."

THOMAS VIEN,  
*Deputy Chief Commissioner.*

---

#### GENERAL ORDER No. 487

*In the matter of the application of Building Products, Limited, of Montreal, Province of Quebec, for permission to supply Solid Fiberboard boxes for shipping freight over railways in Canada under Shipping Container Specifications numbers 23A, 23B, 23C, 23D, and 23E of Interstate Commerce Commission Regulations for the transportation by rail of explosives and other dangerous articles by freight.*

File No. 1717.38.2.

MONDAY, the 22nd day of September, A.D. 1930.

S. J. McLEAN, *Asst. Chief Commissioner.*

C. LAWRENCE, *Commissioner.*

J. A. STONEMAN, *Commissioner.*

Upon its appearing that a revision of the rules for the transportation by freight of explosives and other dangerous articles over railways in Canada is now in progress, and the railways having stated that they have no objection to the immediate use of the said containers, pending the publication and approval by the Board of such rules,—

*It is Ordered:* That, effective October 1, 1930, solid fiberboard boxes, complying with Container Specifications 23A, 23B, 23C, 23D, and 23E, published in Agent B. W. Dunn's Tariff No. 2 on file with the Board under C.R.C. No. 2, may be used for shipping freight over railways in Canada subject to the Board's jurisdiction.

S. J. McLEAN,  
*Assistant Chief Commissioner.*

---

#### GENERAL ORDER No. 488

*In the matter of the application of the Canadian National Railways and the Canadian Government Railways, under Section 348 of the Railway Act, for approval of a standard form, being a release to be signed by persons who, for special reasons, desire to travel in cars which are not intended to carry passengers.*

File No. 1115.20.

THURSDAY, the 2nd day of October, A.D. 1930.

S. J. McLEAN, *Asst. Chief Commissioner.*

J. A. STONEMAN, *Commissioner.*

Upon reading what is filed in support of the application, and the report and recommendation of the Assistant Chief Traffic Officer of the Board,—

*It is Ordered:*

1. That Order No. 45469, dated September 24, 1930, made herein, be, and it is hereby, rescinded.

2. That the following form of release of liability in respect of travelling on non-passenger cars, for use by the railway companies, be, and it is hereby, approved and made applicable to all railway companies within the legislative authority of the Parliament of Canada and subject to the jurisdiction of the Board, namely:—

“.....Railway Company.

“RELEASE OF LIABILITY IN RESPECT OF TRAVELLING IN NON-PASSENGER CARS

“In consideration of the..... Railway Company permitting me, at my request, to travel between..... and ....., or for part of this distance, in a car not intended to carry passengers, which I am not entitled by law to do, I do hereby release and discharge the said company of and from all claims and demands of whatsoever nature which I may now or at any time hereafter have or could maintain by reason or on account of any loss, damage, or injury, to person or property which I may sustain or suffer in getting to or from, or on or off, any such car, or while travelling in any such car, or in any manner in connection with or as a consequence of the journey so made, whether any such loss, damage, or injury be caused by negligence or otherwise.

“Dated at ..... this ..... day of ..... A.D. 19...

Witness:

”

S. J. McLEAN,  
Assistant Chief Commissioner.

GENERAL ORDER No. 489

*In the matter of the application of Building Products, Limited, of Montreal, Province of Quebec, for permission to supply Solid Fiberboard boxes for shipping freight over railways in Canada under Shipping Container Specifications numbers 23A, 23B, 23C, 23D, and 23E, of Interstate Commerce Commission Regulations for the transportation by rail of explosives and other dangerous articles by freight.*

File No. 1717.38.2

TUESDAY, the 14th day of October, A.D. 1930.

S. J. McLEAN, Asst. Chief Commissioner.  
THOMAS VIEN, K.C., Deputy Chief Commissioner.

Upon its appearing that a revision of the rules of the transportation by freight of explosives and other dangerous articles over railways in Canada is now in progress, and the railways having stated that they have no objection to the immediate use of the said containers, pending the publication and approval by the Board of such rules —

*It is ordered:* That, effective October 1, 1930, solid fiberboard boxes, complying with Container Specifications 23A, 23B, 23C, 23D, and 23E, published in Agent B. W. Dunn's Tariff No. 2, on file with the Board under C.R.C. No. 2,

may be used for shipping classes of freight permitted by the said tariff to be shipped in such containers over railways in Canada subject to the Board's jurisdiction.

2. That General Order No. 487, dated September 22, 1930, made herein, be rescinded.

S. J. McLEAN,

*Assistant Chief Commissioner.*

### CIRCULAR No. 225

November 12, 1929.

*Application for authorization to establish sidings with less than standard clearances*

File No. 1750.18

Railway companies subject to the jurisdiction of the Board are requested to show cause why the standard clearances ordered by the general orders of the Board should not be more strictly adhered to, why such railway companies should not be called upon in every application for less than standard clearances to give fuller particulars in connection with the reason why such standard clearance should be reduced, and to show cause why, when such application is made, it should not stand until an inspection has been made by an official of the Board.

By order of the Board,

A. D. CARTWRIGHT,

*Secretary.*

### CIRCULAR No. 226

January 23, 1930.

*Supplement to Rules and Regulations of the Board governing the filing of applications and complaints*

File No. 429

*In re* TARIFF AUTHORITY TO BE GIVEN FOR RATES, FARES, CHARGES, OR REGULATIONS, QUOTED IN COMPLAINTS OR APPLICATIONS FILED WITH THE BOARD

In numerous applications and complaints filed with the Board, rates, fares, charges, etc., are quoted without any reference being given to the tariff in which such rates, fares, etc., are published, and with the vast number of tariffs on file with the Board, it is extremely difficult in some instances for the Traffic Department to locate the tariff schedule containing the rates, fares, etc., named, although, undoubtedly, the applicant or complainant had the tariff schedule, or schedules, before it when extracting the rates, fares, etc., quoted.

### RULING

The Board, in virtue of the provisions of the Railway Act, hereby supplements its rules and regulations governing the filing of applications and complaints as follows:—

In all applications or complaints filed with the Board, and answers of respondents, also all exhibits filed in connection therewith, all rates, fares, charges, regulations or practices complained of, or quoted therein, must give specific reference, by appropriate C.R.C. number, to the tariff authority therefor.

By order of the Board,

A. D. CARTWRIGHT,

*Secretary.*

## CIRCULAR No. 227

January 31, 1930.

File No. 8654

The attention of your company is called to subsection 2 of section 55 of the Railway Act, which reads as follows:—

“(2) There shall be kept in the office of the Secretary of the Board a book, to be called the agents’ book, in which every railway, telegraph, telephone, and express company to which this Act in whole or in part applies shall enter its name and the place of its head office and the name of an agent at Ottawa and his place of business or some other proper place within Ottawa where he may be served for such company. R.S., c. 37, s. 41; 1908, c. 62, s. 10; 1911, c. 22, s. 3. Am.”

An agents’ book has been provided to the Board requesting that your company comply as speedily as possible with the requirements of the above subsection.

Yours truly,

A. D. CARTWRIGHT,

*Secretary.*

## CIRCULAR No. 228

April 3, 1930.

*In re protection of level crossings on back-up movements*

File No. 25434.5

I am directed by the Board to refer you to its General Order No. 483, dated March 5, 1930, and to ask the railway companies subject to the Board’s jurisdiction to show cause why, in order to remove any doubt or ambiguity as to where the end of the circuit comes, arrangements should not be made to establish a definite mark. For example, a small finger-board with the words “end of block” or “end of circuit.”

By order of the Board,

A. D. CARTWRIGHT,

*Secretary.*

## CIRCULAR No. 229

June 11, 1930.

*Re General Order No. 361, Reporting of Accidents*

File No. 45

The Operating Department calls attention to a practice which is developing under General Order No. 361 where standing trains or standing equipment is concerned, the railway companies taking the position that the general order requires accidents where train or equipment is actually in motion only to be reported; the department contending many of the occurrences are the result of transportation, although at the moment the train or engine is at rest; and that faulty equipment may be the cause of the occurrence.

Railway companies are required to show cause why reports of accidents to employees, passengers or others, occurring while the train or equipment is at rest, as described above, should not be reported, so that all matters in connection therewith can be given the benefit of investigation.

By order of the Board,

A. D. CARTWRIGHT,

*Secretary.*

## PREFATORY NOTE

The Sixteenth Parliament was dissolved May 30th, 1930, and writs for a general election were, by Order in Council, dated May 30th, directed to be issued on the same day and to be returnable on August 18th, 1930. In all electoral districts containing urban polling divisions, the enumeration of voters took place between June 2nd and June 7th, inclusive, and urban registration began on June 12th and continued until June 14th. The preliminary lists of voters in rural polling divisions were directed to be completed by Saturday, June 14th. In the seventy electoral districts mentioned in Schedule Three of the statute the day fixed for nomination was July 14th, and in all other electoral districts, nomination day was July 21st. A poll was held in every electoral district on July 28th, except in the electoral districts of Labelle, in the province of Quebec, and Acadia, in the province of Alberta, where the returns were by acclamation. The first return was gazetted on August 2nd, and the last one (for the electoral district of Peace River) on September 8th, 1930.

JULES CASTONGUAY,  
*Chief Electoral Officer.*

OTTAWA, January 31st, 1931.

---

## REMARQUE PRÉLIMINAIRE

Le Seizième Parlement a été dissous le 30 mai 1930, et un arrêté-en-conseil du 30 mai a ordonné que les brefs d'une élection générale fussent émis le même jour et rapportables le 18 août 1930. Dans tous les districts électoraux contenant des arrondissements de scrutin urbains, l'énumération des électeurs eut lieu du 2 au 7 juin inclusivement; l'inscription urbaine a été commencée le 12 juin et s'est poursuivie jusqu'au 14 juin. Le samedi 14 juin fut désigné comme dernier jour pour l'achèvement des listes d'électeurs dans les arrondissements de scrutin ruraux. Dans les soixante-dix districts électoraux mentionnés dans l'Annexe 3 de la Loi, le jour fixé pour les présentations était le 14 juillet, et dans tous les autres districts électoraux, le jour de la présentation était le 21 juillet. Sauf dans les districts électoraux de Labelle, province de Québec, et d'Acadia, province de l'Alberta, où il y a eu acclamation, un scrutin a été tenu dans chaque district électoral le 28 juillet. Les premiers rapports ont été publiés dans la *Gazette du Canada* le 2 août et le dernier rapport (pour le district électoral de Peace River) y a été publié le 8 septembre 1930.

JULES CASTONGUAY,  
*Directeur général des élections.*

OTTAWA, le 31 janvier 1931.

For the purpose of this table the number of voters who voted in electoral districts returning two members has been assumed to be one-half of the number of votes polled.  
 Pour les fins de ce tableau le nombre des électeurs qui ont voté dans les districts électoraux élisant deux députés a été considéré comme étant la moitié du nombre des votes déposés.
